PROJECT FACT SHEET

CONTRACT TITLE: Characterize Reservoir Heterogeneity in San Andres and Grayburg Reservoirs

DATE REVISED: 07-24-89

OBJECTIVE: To increase the understanding of the geologic variability that affects the recoveries of oil and gas by studying carbonate sandbar trends in a group of reservoirs that contain large volumes of unproduced hydrocarbons.

PROJECT DESCPTN: This project will benefit the public in two ways: (1) the compiled and new information about Texas reservoirs will be available to the government and the petroleum industry to use in the evaluation of the distribution and volume of the carbonate sandbar facies and gas reservoirs, and (2) the increased understanding and predictability of carbonate reservoir heterogeneity will encourage drilling. This should increase the volume of domestic production.

PRESENT STATUS: A research grant was awarded on February 1, 1989. The project has been initiated and is progressing on schedule.
