For Immediate Release
November 22, 2009

The National Energy Technology Laboratory (NETL) has selected Mark L. McKoy as a Senior Management Regulatory & Technical Advisor. In this role, he will advise and assist with NETL's environmental management and regulatory compliance. Primarily, he will focus on NETL's compliance with the National Environmental Policy Act (NEPA). Previously, he worked on NEPA compliance for major demonstration projects and environmental management issues for NETL. Prior to joining the Federal work force, Mark supported the Department of Energy's Natural Gas program and the Environment, Safety, and Health division at NETL.

Mark grew up in Griffin, Georgia, and earned B.S. and M.S. degrees in geology from Georgia Southwestern College and Dartmouth College, respectively. He subsequently attended engineering school and law school at West Virginia University, earning a J.D. degree. Currently, he lives in Bruceton Mills, West Virginia.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – “the ENERGY lab” – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
