

# REGIONAL CARBON PARTNERSHIPS PROGRAM OVERVIEW

OCTOBER 12, 2005

**Big Sky**  
CARBON SEQUESTRATION  
PARTNERSHIP

## **PHASE I Summary & PHASE II Lead-in**

**Susan M. Capalbo**  
**Montana State University**

**Robert Smith**  
**University of Idaho**

**Travis McLing**  
**INL**

**Dick Benson**  
**LANL**

**PHASE I PROJECT SUMMARY & OVERVIEW**

**SUSAN CAPALBO - DIRECTOR, MONTANA STATE UNIVERSITY**

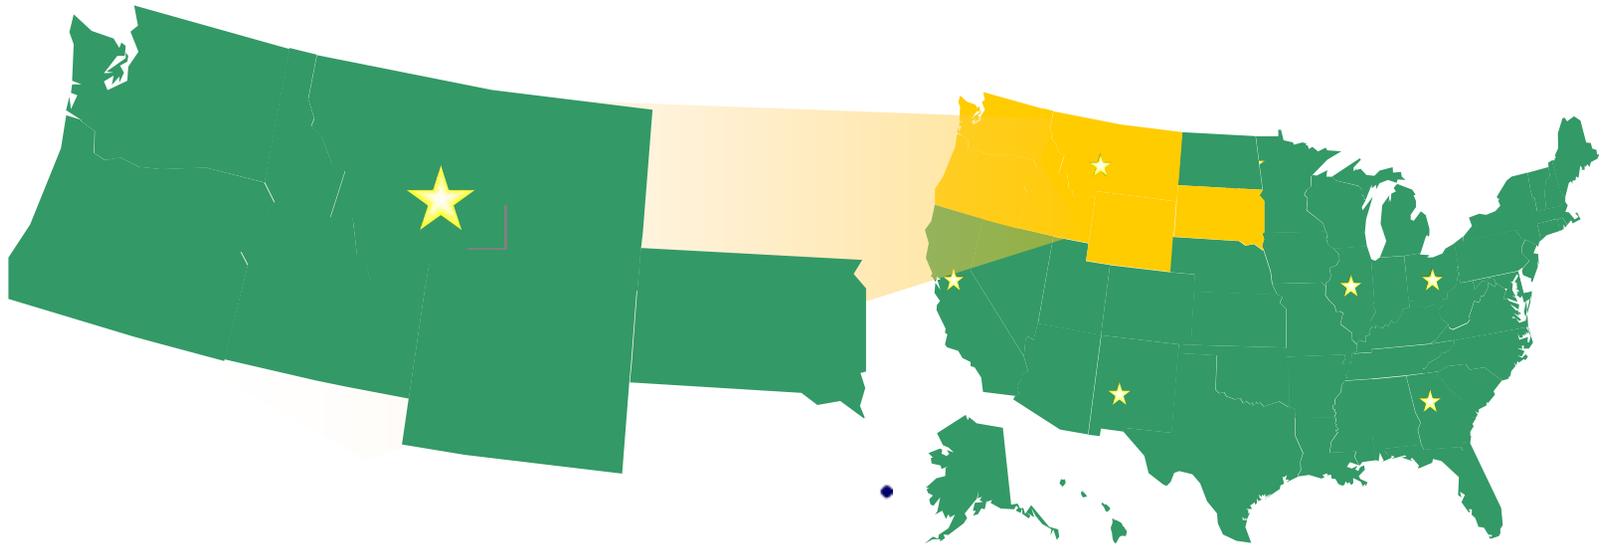

# Outline

- Composition/Objectives/Milestones: Phase I
- Collaborators and Major Contributors
- Developing Databases
- Assessing Potential Sinks for Phase II
- Advanced Concepts: designing Phase II efforts

# Composition of Partnership

- Research Institutions (universities, labs, others)
- State, federal agencies (includes USDA, USGS, NASA)
- Industry members including major power producers  
(Energy Northwest, Sempra Generation, Portland  
General Electric, Puget Sound Energy)
- Carbon trading entities (NCOC)
- Outreach Education partners
- Tribal Nations and Councils
- International Collaborators (includes Canada, Norway, India)

# Partnership Area

SUSAN CAPALBO - DIRECTOR

# Context for Phase I

- “Wealth of sinks, wealth for future energy supplies”
- Examining geological and terrestrial sinks
- Energy security, economic growth
- 40% of U.S. coal resources are in Big Sky region
- Marriage of good science-based technologies with good economics

# Major Goals for Phase I

- Gauging public awareness of carbon sequestration, clean coal, and energy alternatives
- Developing databases for sources, sinks, energy infrastructure
- Regulatory and permitting issues and constraints
- Assessing potential sinks for Phase II demonstration sites
- Energy future/economic frameworks
- Designing MMV for all sinks that are “doable” & cost effective

# Major collaborators for Phase I

- Databases/GIS: LANL, INL, SDSMT, UWYO, MSU
- Terrestrial: MSU, SDSMT, Texas A&M
- Geological Sinks: INL, UI, BSU LANL
- Outreach/Education: Entech Strategies
- Advanced Concepts: LANL, INL, MSU, UI, NCOC

# Major Milestones Log Phase I

Project Phase	Milestone	Log
Partnership as a Whole		
<ul style="list-style-type: none"> <li>Quantify the region's contribution to meeting Bush administration's target goals of reducing GHG intensity 18% by 2012</li> <li>Develop a risk assessment and decision support framework for optimizing soil C sequestration portfolio to be used in Phase II</li> <li>Identify market-based voluntary approaches to carbon sequestration</li> </ul>		<p>End of Year 2</p> <p>End of Year 2</p> <p>End of Year 2</p>

# Major Milestones Log Phase I

Project Phase	Milestone	Log
<b>Geological Sequestration Phase</b>		
	<ul style="list-style-type: none"> <li>Identify sources of CO<sub>2</sub></li> <li>Identify and assess promising geological sinks</li> <li>Identify advanced concept for geological sequestration</li> </ul>	<p>End of Year 1</p> <p>End of Year 1</p> <p>End of Year 2</p>
<b>Terrestrial Sequestration Phase</b>		
	<ul style="list-style-type: none"> <li>Identify and assess the potential for soil C sequestration in region</li> <li>Identify advanced concept for terrestrial sequestration</li> </ul>	<p>End of Year 1</p> <p>End of Year 2</p>
<b>Outreach</b>		
	<ul style="list-style-type: none"> <li>Web site development</li> <li>Development of forum for engaging community leaders in the region in carbon sequestration strategies</li> </ul>	<p>End of Year 1</p> <p>End of Year 2</p>

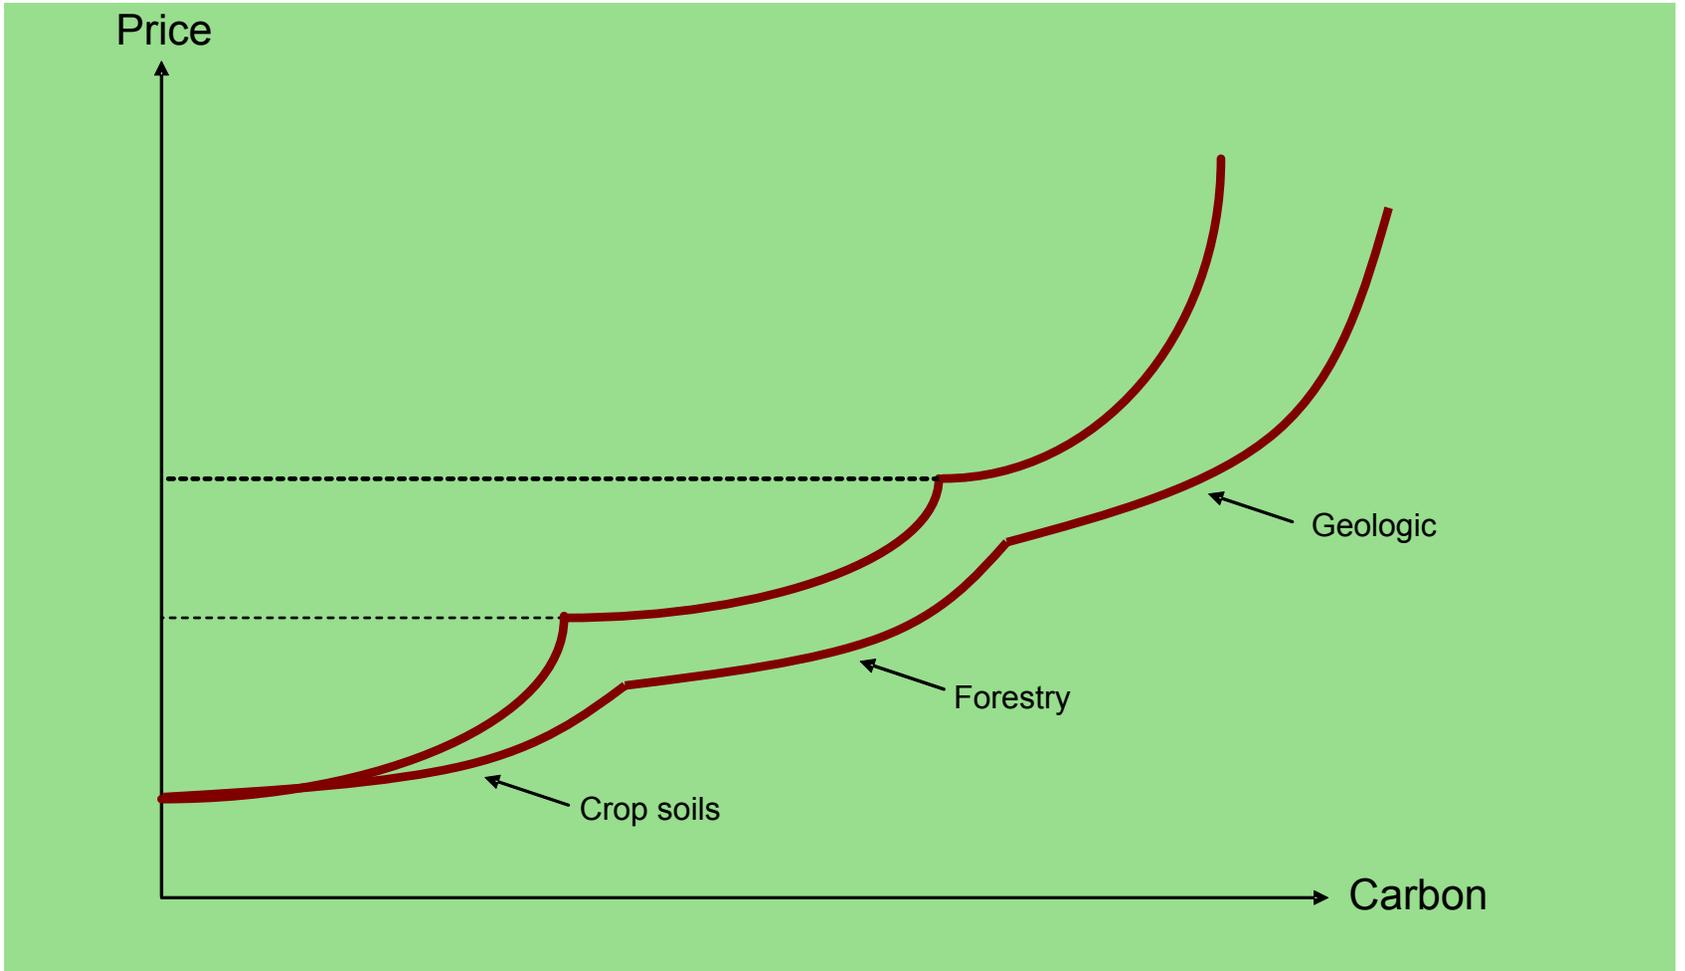

# Components of an Economic/Risk Assessment Framework

- Economic input on cost (from private sector)
- Legal and regulatory issues
- Monitoring, Measurement and Verification
- Common units for comparison – spatial, temporal metrics
- End product – regional supply curve(s) for Carbon

# Regional Carbon Supply Curve

*A new energy future for Montana, Idaho, South Dakota, Wyoming and the nation.*

SUSAN CAPALBO - DIRECTOR

Carbon

# Phase I Experience

- **Identify, assess and catalogue C sources and promising geological and terrestrial sinks:  
Carbon Atlas**

**Match up sources and transmission**

**Match up sources, sinks, & transmission**

# Carbon Atlas: Geologic Sequestration

- Develop regional carbon atlas from existing sources
- Assess unique rock types with emphasis on mineralization and other processes that transform CO<sub>2</sub> to carbonate alkalinity and/or solids
- Evaluate the potential of regionally abundant basalt rocks for sequestration

# Carbon Atlas: Terrestrial Sequestration

- Bridge to geological sequestration
- Technical potential
- Economic potential
- Pilot studies for carbon trading

# GIS Accomplishments

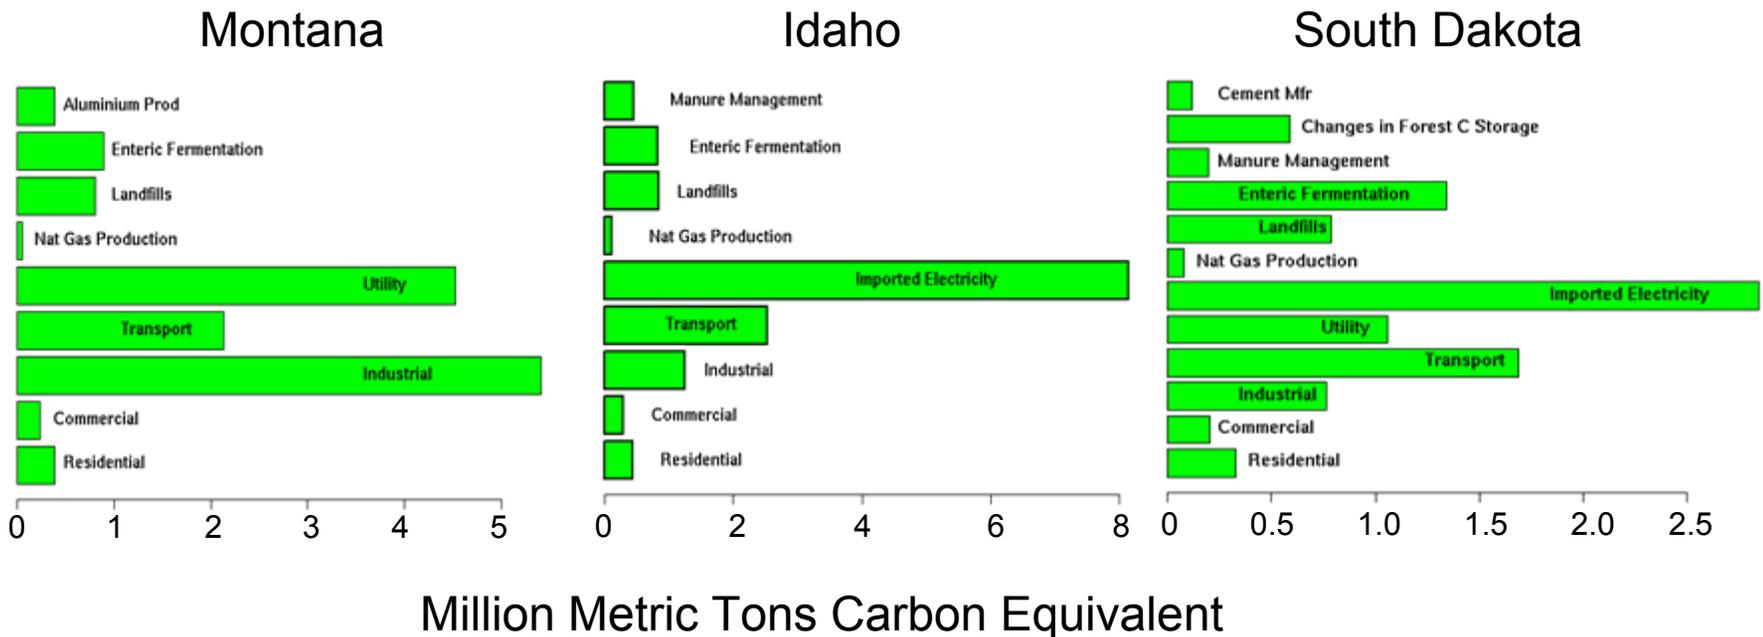

RANDY LEE - IDAHO NATIONAL LABORATORY  
PAUL RICH - LAS ALAMOS NATIONAL LABORATORY

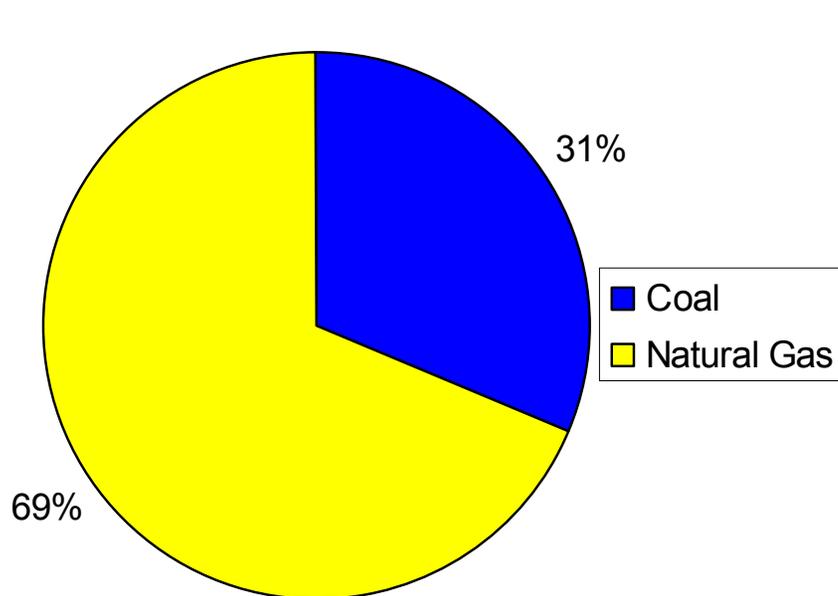

# Sources

- Point locations for major utility and industrial emitters

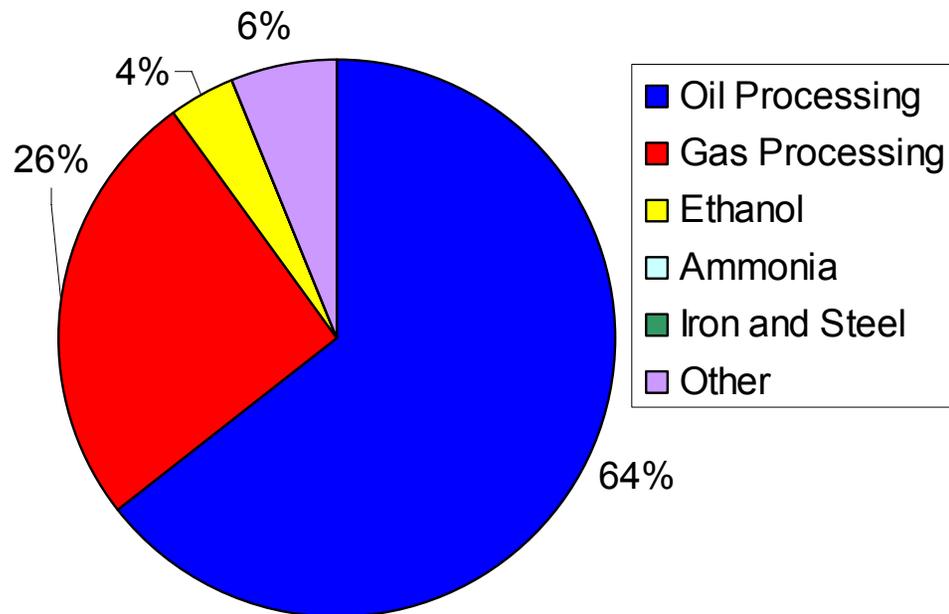

Major Categories (> 0.5 MMTCE)

# Distribution of CO<sub>2</sub> Point Sources in the Big Sky Partnership

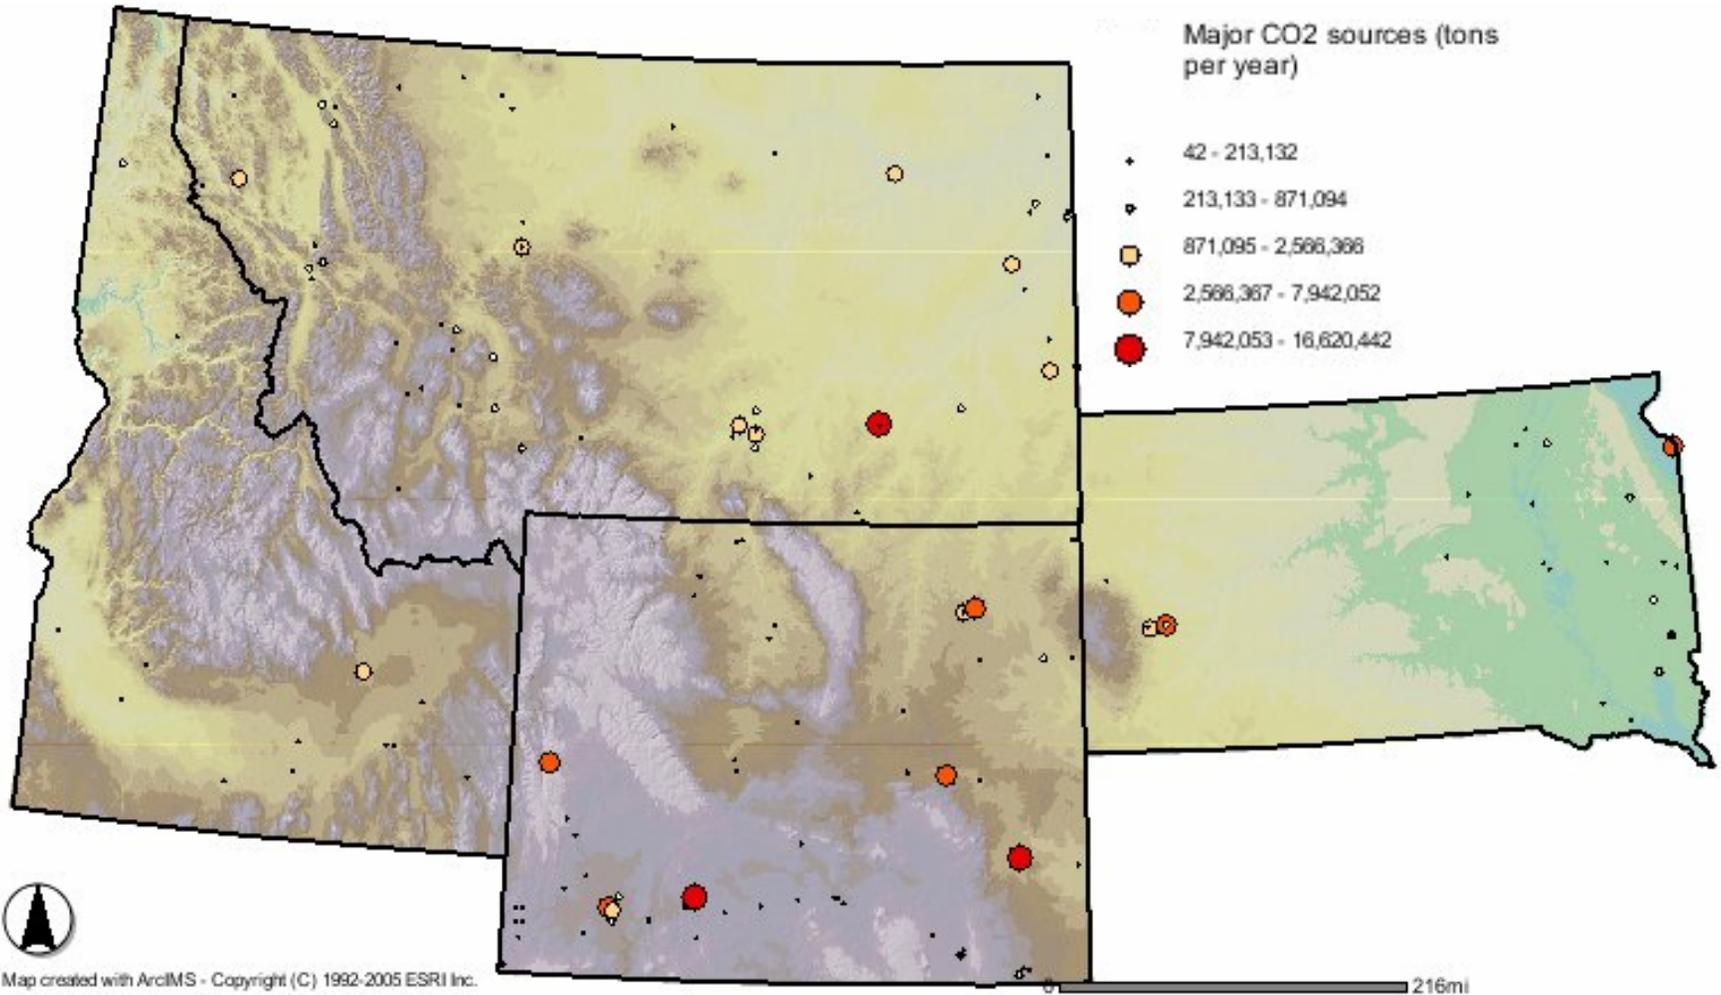

Total Utility: 65mmt CO<sub>2</sub> Eq/yr

Total Non-utility: 41 mmt CO<sub>2</sub> Eq/yr

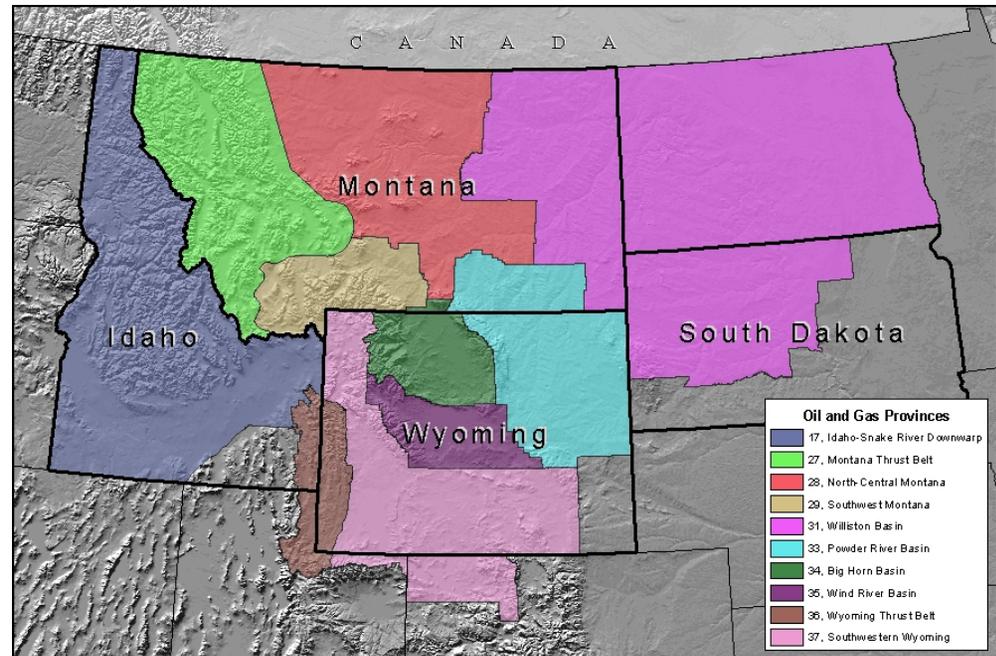

# Big Sky Regional CO<sub>2</sub> Sources

RANDY LEE - IDAHO NATIONAL LABORATORY  
PAUL RICH - LAS ALAMOS NATIONAL LABORATORY

# GIS - Objectives

- Characterize geologic and terrestrial carbon sinks and carbon sources
- Design/build Big Sky Carbon Atlas
- Develop Big Sky Data Warehouse
- Coordinate with Other Partnerships and NatCarb

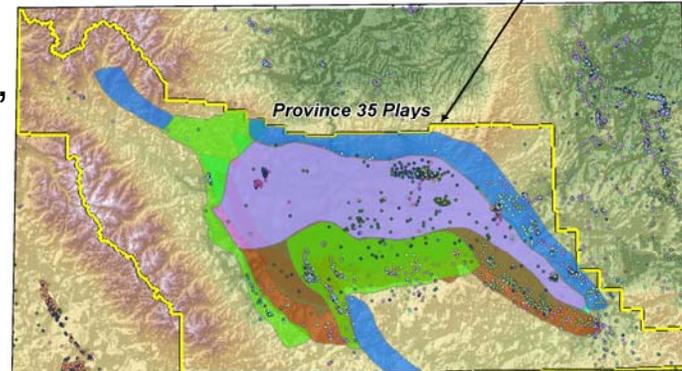

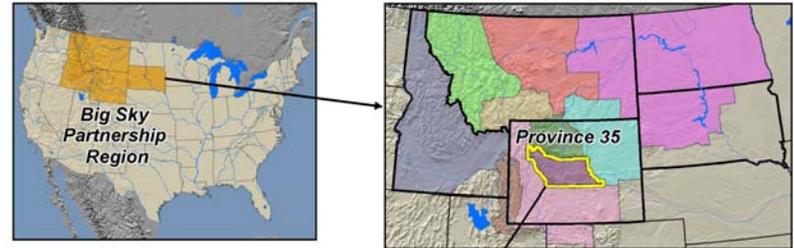

# Collaborators

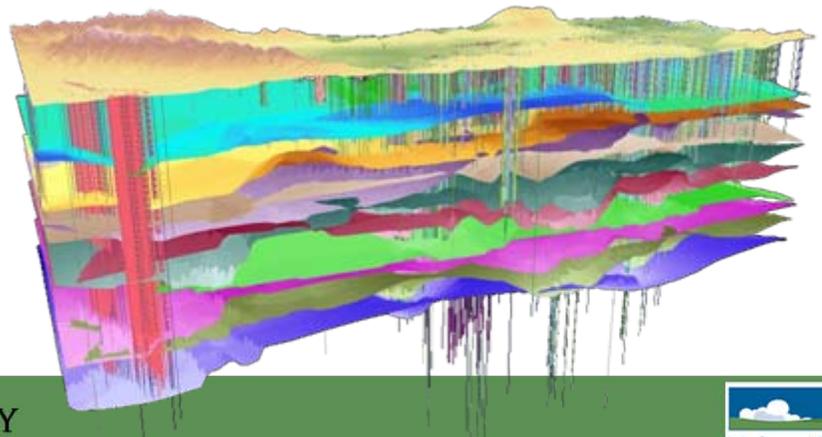

- GIS Coordination
  - Paul Rich (Los Alamos National Laboratory)
- Geologic GIS
  - Randy Lee (Idaho National Laboratory)
  - Jeff Hammerlinck (University of Wyoming)
- Terrestrial GIS
  - Karen Updegraff (South Dakota School of Mines and Technology)
- Big Sky Carbon Atlas / Data Warehouse
  - Todd Kipfer (Montana State University)
  - Aaron Jones (Montana State University)
  - Paul Rich (Los Alamos National Laboratory)

# Geologic GIS

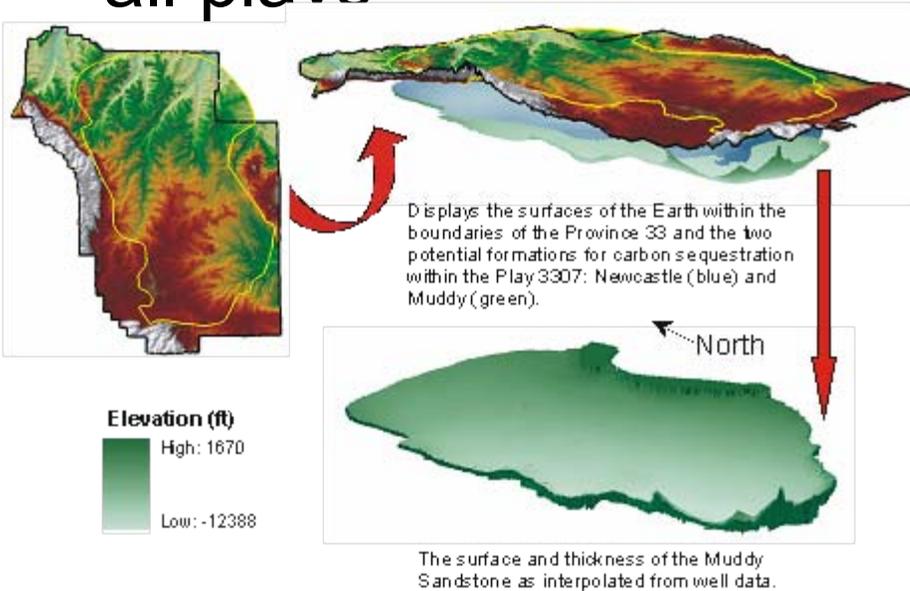

- Compiled data from 117,304 active wells in WY & MT
- Developed GIS model to calculate sequestration volumes (based on depth, temperature, pressure, density, and thickness)
- Characterized sequestration volumes for 283 formations in 57 plays

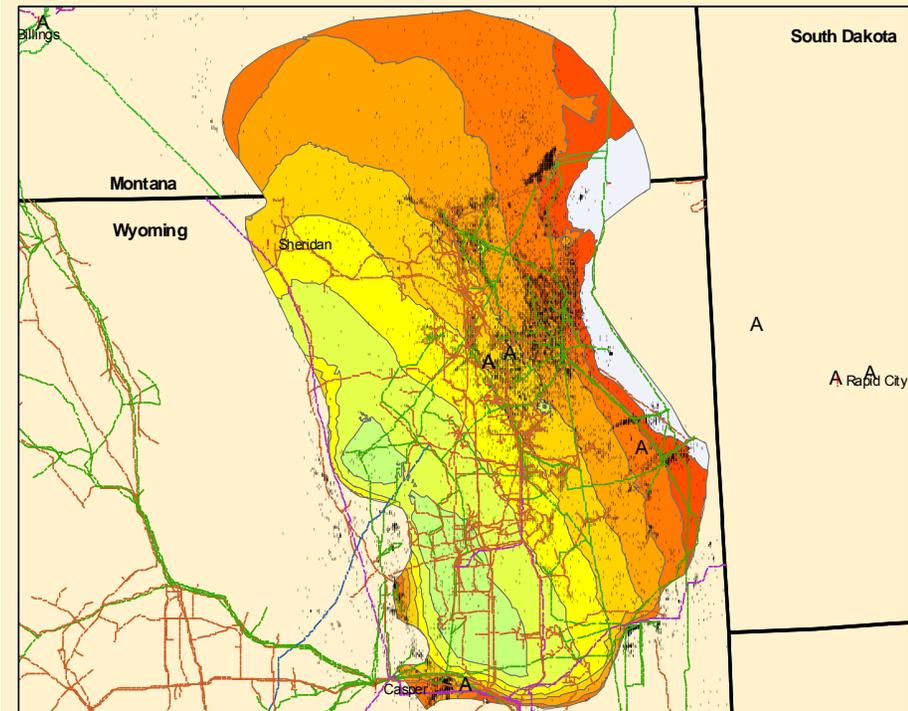

- Wells by Formation**
- CLOVERLY
  - CODY
  - CROW MOUNTAIN
  - DAKOTA
  - FORT UNION
  - FRONITER
  - JELM
  - LAKOTA
  - LANCE
  - MADISON
  - MEETEETSE
  - MESAVERDE
  - MORRISON
  - MUDDY
  - NUGGET
  - PHOSPHORIA
  - SUNDANCE
  - TENSLEEP
  - WIND RIVER

- Developed maps of each formation within all plays

## Muddy Sandstone 3307

Note: All depths and sequestration volumes are based on wells within Wyoming and Montana only.

### Legend

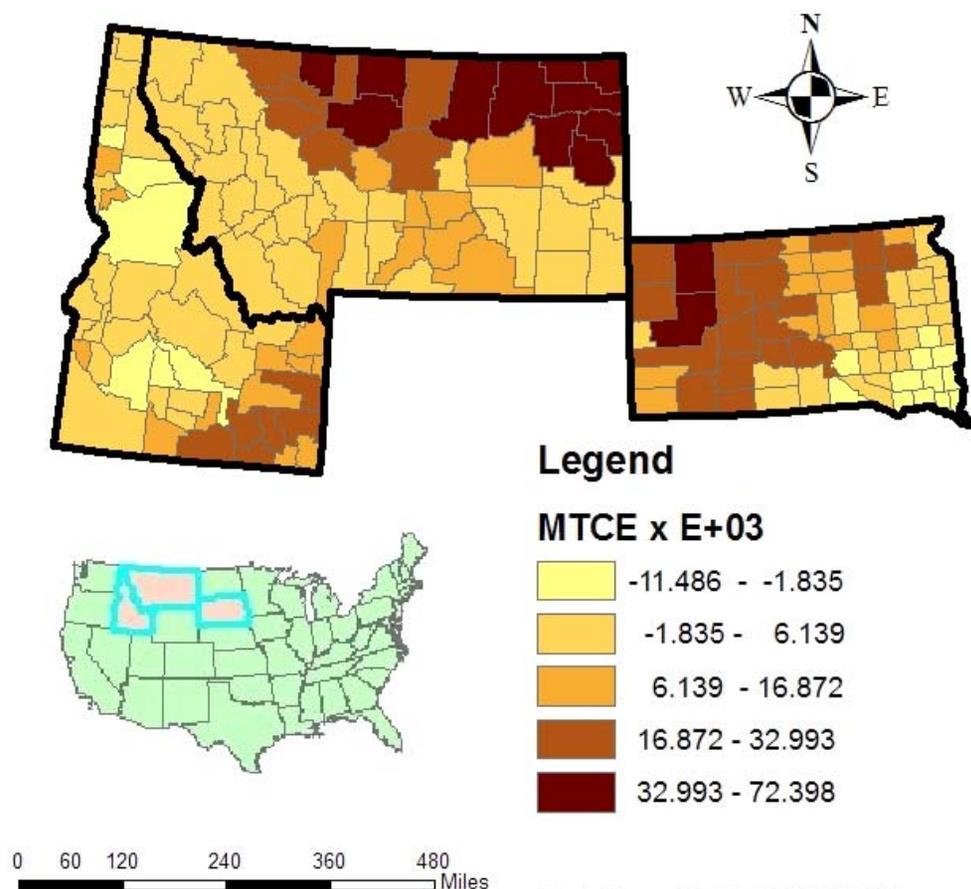

- A Coal Plants
- ! Cities
- Pipelines**
  - Carbon Dioxide
  - Crude Oil
  - Natural Gas
  - Processing Product
- Wells**
  - (points displayed with 1/2 mile diameter)
- Province
- State boundary

Depth (m)	Cost (\$)	Volume (MMT)
0 - 800	251,234	0.00
800 - 1300	251,234	133.37
1300 - 1800	374,798	510.10
1800 - 2300	559,133	681.98
2300 - 2800	834,128	393.17
2800 - 3300	1,244,372	339.51
3300 - 3800	1,856,386	262.73
3800 - 4300	2,769,402	105.40

# Terrestrial GIS

- Used Century Model to examine terrestrial carbon flux (based on climate, soil, land use)
- Evaluated management scenarios for continuous grassland and conventionally-tilled cropland
- Estimated current annual soil carbon fluxes in Big Sky states

Data from CENTURY Model run  
(MTCE=Metric Tons C Equivalent)  
Map by SDSM&T

# Big Sky Carbon Atlas

Data Type	Description	Served by Big Sky
GHG Sources	Emission point locations	Yes
GHG Inventory	State-level source & sink emission summaries	Yes
GHG Livestock	County-level livestock emission summaries	Yes
Terrestrial Sinks	Actual/potential soil sink estimates (CENTURY)	Yes
Soil	SSURGO/STATSGO & Soil Texture Grids	Yes
Climate	Monthly precipitation/temperature 1900–present	Yes
Climate Divisions	NCDC climate division boundaries	Yes
Ag Management	Cropland areas (various tillage/rangeland)	Yes
Political	State/County Boundaries	Yes
Infrastructure	Transportation/Pipelines/Powerlines	Partial
Geologic Sinks	Oil/Gas Provinces & Plays	Yes
Wells	Oil & Gas wells	Yes
<p><i>Infrastructure data layers such as gas pipelines are not served due to homeland security issues.</i></p>

# Phase I Geologic Sequestration

## Basalts and Mineral Trapping

ROBERT SMITH (UI)  
TRAVIS MCLING (INL)

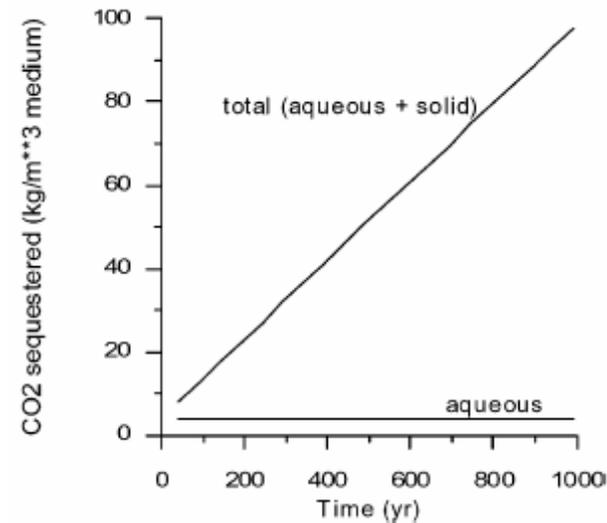

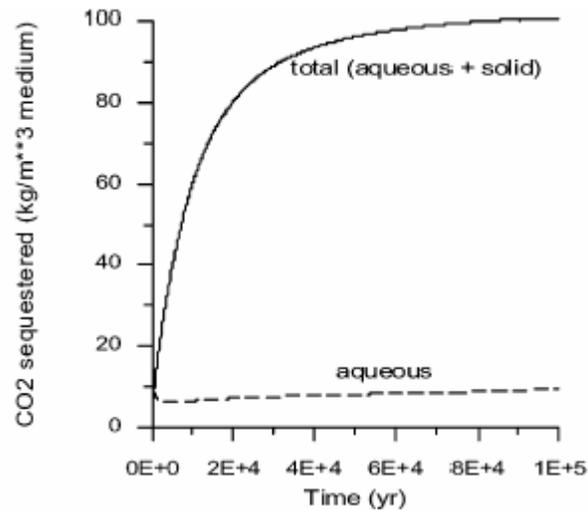

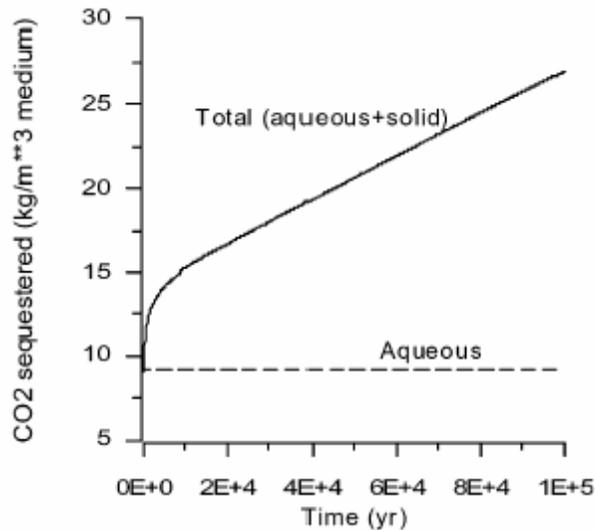

# Partnership Geologic Sequestration Objectives

- Evaluate the geologic sequestration potential regional sedimentary and volcanic basins
  - Favorable and worthy of further consideration
  - Unfavorable
  - Insufficient information to classify
- Identify potential pilot-scale sequestration site(s)
  - Focus on *Mineral Trapping – Conversion of CO<sub>2</sub> to permanent solid phase*

# Mineral Trapping

Xu *et al.* (2004)

Fixed CO<sub>2</sub> pressure of 260 bars

**Glauconitic sandstone**  
**~0.2 g yr<sup>-1</sup> m<sup>-3</sup>**

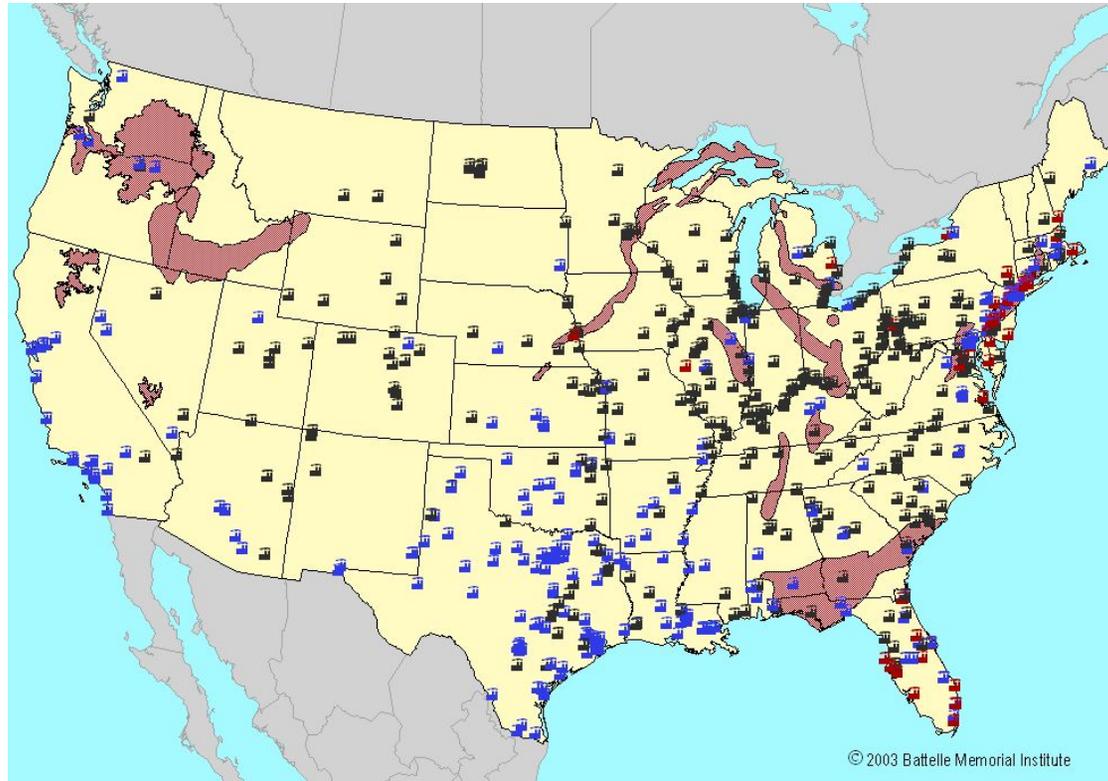

**Gulf Coast sediments**  
**~3 g yr<sup>-1</sup> m<sup>-3</sup>**

**Dunite**  
**~100 g yr<sup>-1</sup> m<sup>-3</sup>**

# Basalts and Sequestration

- Significant basalt formations in the region
  - 164,000 km<sup>2</sup> – Columbia River Basalt Group
  - 64,000 km<sup>2</sup> – Snake River Plain
- Chemical makeup favorable for mineralization reactions
$$\text{Plagioclase}[\text{CaAl}_2\text{Si}_2\text{O}_8] + 2\text{H}_2\text{O} + \text{CO}_2 \rightarrow$$
$$\text{Calcite}[\text{CaCO}_3] + \text{Clay}[\text{Al}_2\text{Si}_2\text{O}_5(\text{OH})_4]$$
- Theoretical capacity ~150 kg C m<sup>-3</sup>
- Deeper aquifers contain non-potable water

# Large Basalt Provinces and Power Plants in the US

ROBERT SMITH (UI)  
TRAVIS MCLING (INL)

# Flood Basalts at Twin Falls, Idaho

ROBERT SMITH (UI)  
TRAVIS MCLING (INL)

# Normalized Mineralogy

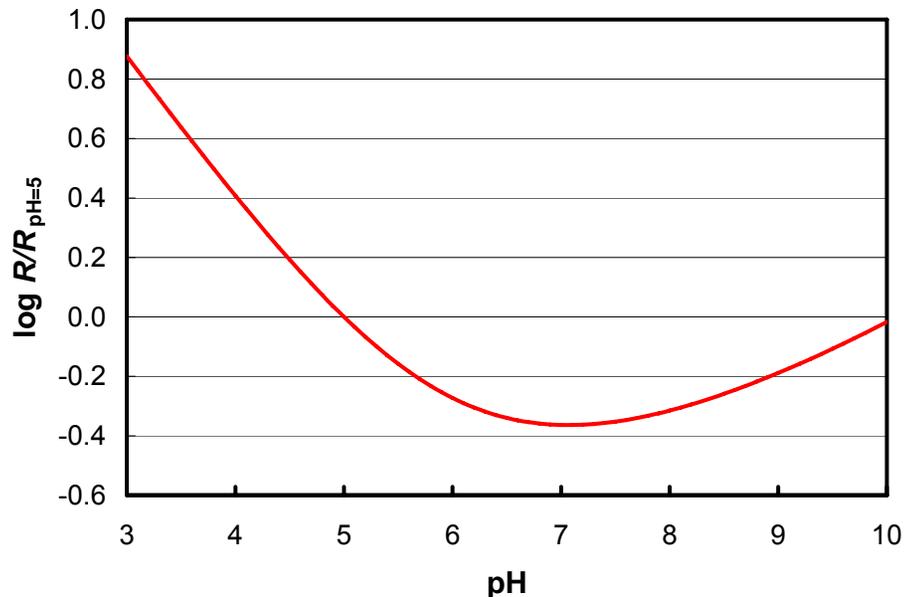

## Snake River Plain Basalt

Oxides	Wt %	Normalized Mineralogy	Ti, P Free	Surface Area
		Wt %	Wt %	cm <sup>2</sup> g <sup>-1</sup>
SiO <sub>2</sub>	46.10			
TiO <sub>2</sub>	2.60			
Al <sub>2</sub> O <sub>3</sub>	14.51	Orthoclase (Or)	K-Feldspar KAISi <sub>3</sub> O <sub>8</sub>	123
Fe <sub>2</sub> O <sub>3</sub>	2.62	Albite (Ab)	Plagioclase NaCaAl <sub>3</sub> Si <sub>5</sub> O <sub>16</sub>	115
FeO	10.57	Anorthite (An)		
MnO	0.20	Diopside (Di)	Clionpyroxene Ca <sub>3</sub> Mg <sub>2</sub> FeSi <sub>6</sub> O <sub>18</sub>	87
MgO	8.49	Hypersthene (Hy)	Orthopyroxene Mg <sub>2</sub> FeSi <sub>3</sub> O <sub>9</sub>	87
CaO	10.34	Olivine (Ol)	Olivine Mg <sub>4</sub> Fe <sub>2</sub> Si <sub>3</sub> O <sub>12</sub>	84
Na <sub>2</sub> O	2.47	Magnetite (Mt)	Magnetite Fe <sub>3</sub> O <sub>4</sub>	115
K <sub>2</sub> O	0.93	Ilmenite (Il)		
P <sub>2</sub> O <sub>5</sub>	0.70	Apatite (Ap)		
Total	99.53	Total	Total	92.98

# Reaction Rate Model

$$R = k_+ \cdot A \cdot \left( a_{H^+}^{0.5} + 10^{-3} + 10^{-5} \cdot a_{H^+}^{-0.25} \right) \left[ 1 - \frac{Q}{K} \right]$$

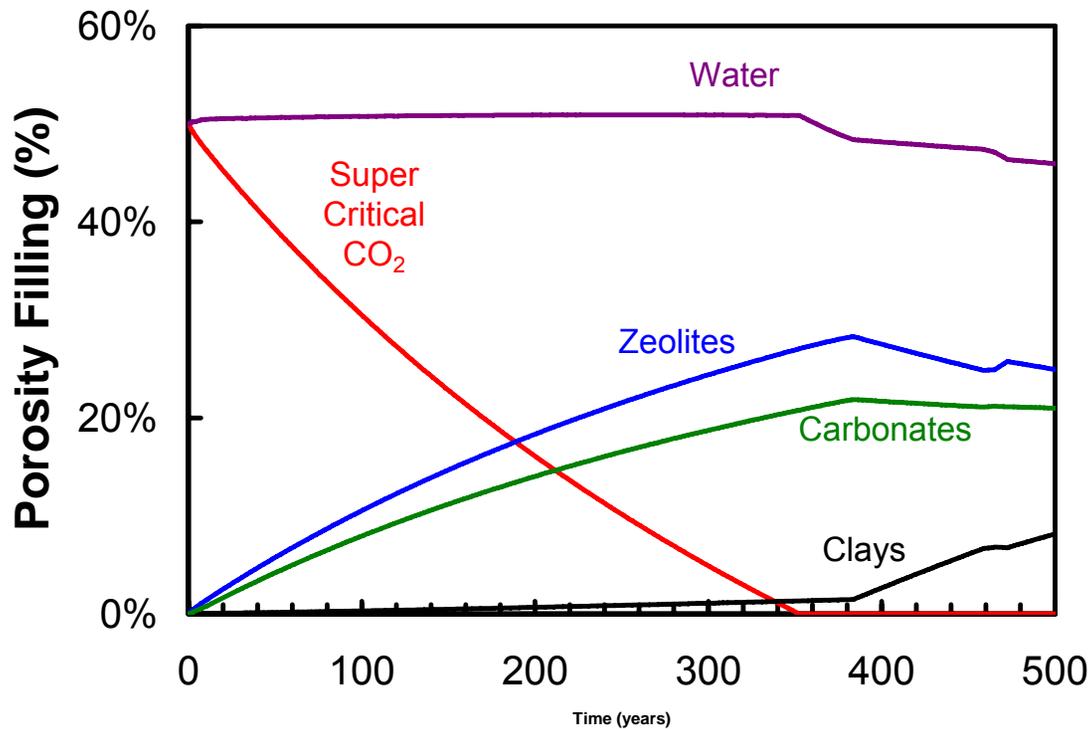

$k_+$	Forward Rate Constant
$A$	Surface Area
$a_{H^+}$	Hydrogen ion activity (pH)
$Q$	Ion Activity Quotient
$K$	Equilibrium Constant

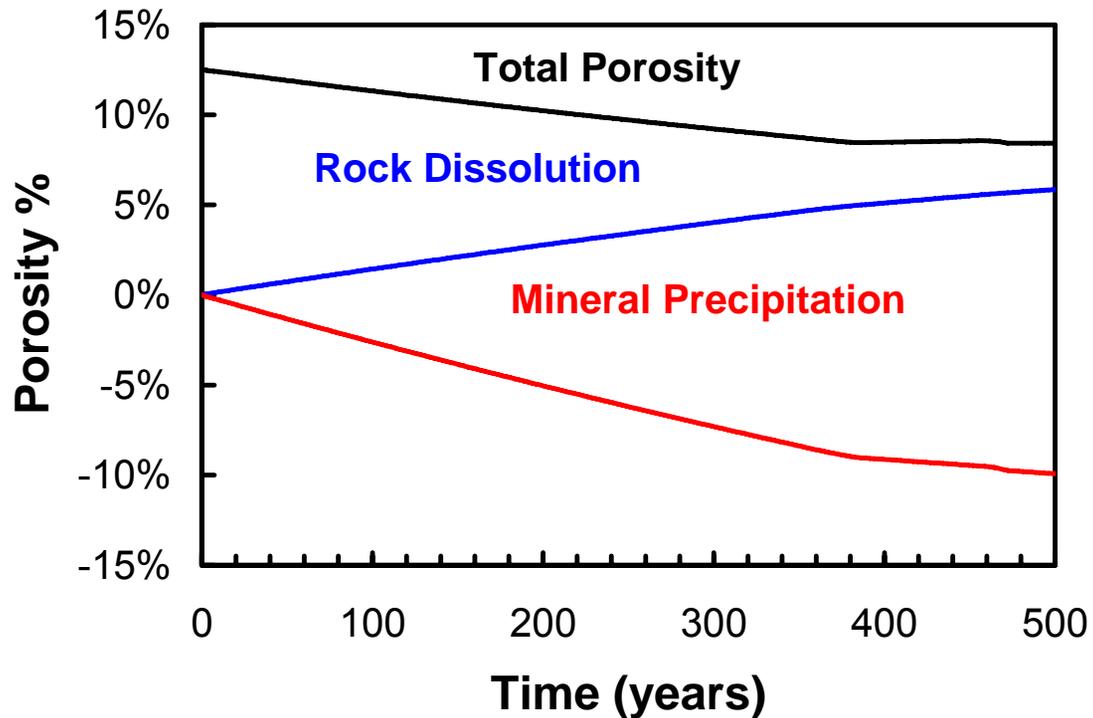

# Model Conditions

- Porosity → 12.5 %
  - 6.25% supercritical CO<sub>2</sub>
  - 6.25% groundwater
- Pressure → 200 bars (2 km hydrostatic load)
- Temperature → 40 °C
- Super critical CO<sub>2</sub> density → 821 kg m<sup>-3</sup>
- Relative reactions rates from “literature” rate law
- Calibrated to estimated basalt reaction rate of 150 mg L<sup>-1</sup> yr<sup>-1</sup> (Roback *et al.* 2001)

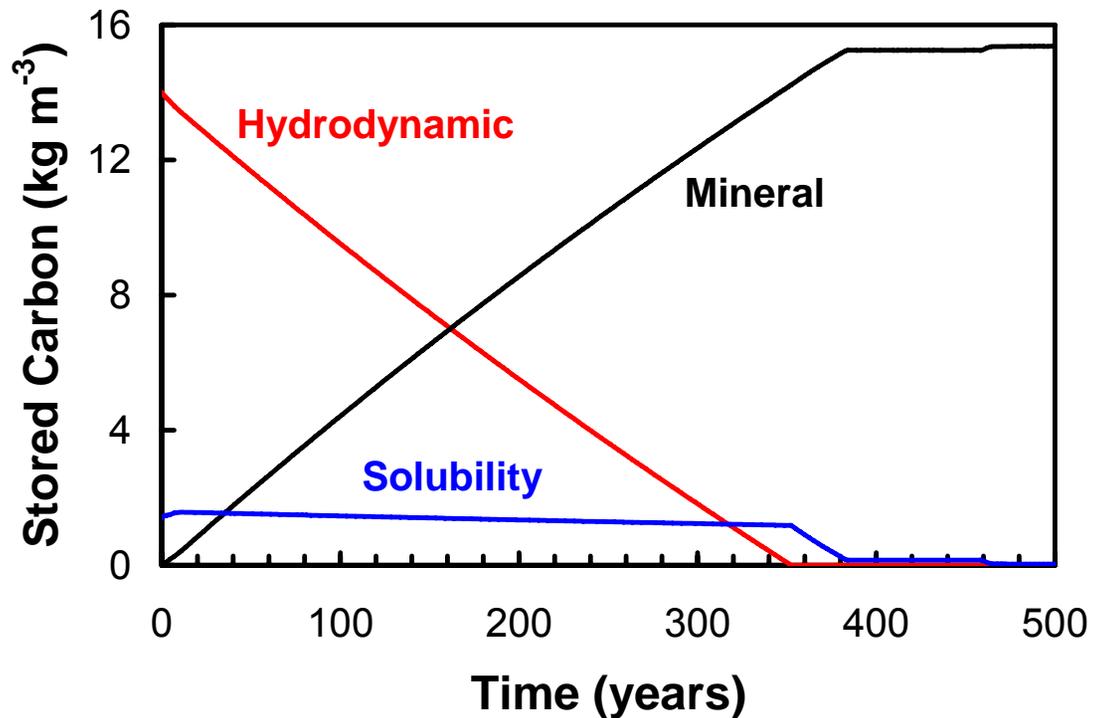

# Reaction Products

# Porosity Changes

# Trapping Processes

# Summary

- Hydrodynamic, solubility and mineral trapping contribute to long-term storage of CO<sub>2</sub>
- Relative importance of mineral trapping is a function of rock type
- For mafic rocks, mineral trapping is dominate mechanism after ~150 years
- Mineral trapping eliminates risk of leakage

# Phase I Terrestrial Sequestration

Forestry, rangelands, croplands

# Forestry Sequestration Potential

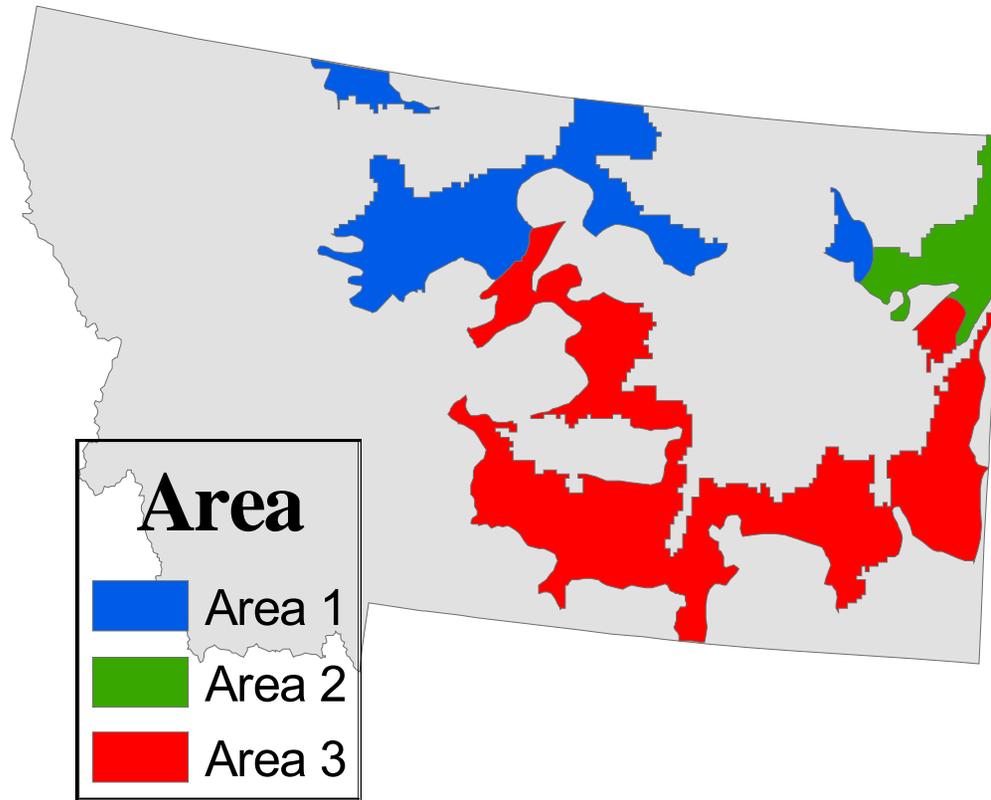

<b>Practice</b>	<b>Available Area (1000 Ac.)</b>	<b>Potential Area (1000 Ac.)</b>	<b>Potential Mitigation (TgCO<sub>2</sub>e/yr)</b>
<b>Afforestation</b>	34,000	3,400	4 – 6
<b>Forest Management</b>	10,900	6,200	1.5 – 2
<b>Field Windbreaks</b>	594	300	1.0 – 1.5
<b>Riparian Forests</b>	1,500	750	2 – 2.5
<b>Biomass for Energy</b>	10,500	330	0.25 – 3
<b>Total</b>			9 – 15

# Big Sky agricultural land areas (1000 km<sup>2</sup>)

# Rangeland potential (Texas A&M)

- GIS based analysis
- Climate Conditions
  - **No Potential - Less than 130 mm (~5 inches) of annual precipitation**
  - **Low potential – 130 to 230 mm (~5 to 9 inches) of annual precipitation**
  - **Moderate potential – 230 to 460 mm (~9 to 18 inches) of annual precipitation**
  - **High potential – Greater than 460 mm (18 inches) of annual precipitation**
- Land use Types
  - **Shrublands**
  - **Grasslands/Herbaceous**
  - **Pasture/Hay**

# Rangeland Potentials by State

## Idaho

- 11 million hectares could be classified as rangeland cover types --
  - 7.5 million hectares were shrublands,
  - 2.8 million hectares were grassland/herbaceous,
  - 0.8 million were pasture/hay cover
- Land tenure
  - 7.1 million hectares fell under federal jurisdiction,
  - 0.32 million were Indian Reservations, and
  - 3.7 million hectares were private or other non-federal lands.
- Climatic potential rangeland
  - high 39%
  - moderate 57%
  - low 4%
- Average carbon that can be sequestered: 0.1-0.05 tons/yr/ha

# Rangeland Potentials by State

## Montana

- 21 million hectares could be classified as rangeland cover types --
  - 3.3 million hectares were shrublands,
  - 17.0 million hectares were grassland/herbaceous,
  - 0.8 million were pasture/hay cover
- Land tenure
  - 4.8 million hectares fell under federal jurisdiction,
  - 2.0 million were Indian Reservations, and
  - 14.5 million hectares were private or other non-federal lands.
- Climatic potential rangeland
  - high 17%
  - moderate 83%
  - low 0.1%
- Average carbon that can be sequestered: 0.05 tons/yr/ha

# Rangeland Potentials by State

## South Dakota

- 12 million hectares could be classified as rangeland cover types --
  - 0.3 million hectares were shrublands,
  - 8.7 million hectares were grassland/herbaceous,
  - 3.0 million were pasture/hay cover
- Land tenure
  - 1.0million hectares fell under federal jurisdiction,
  - 2.7 million were Indian Reservations, and
  - 8.4 million hectares were private or other non-federal lands.
- Climatic potential rangeland
  - high 55%
  - moderate 45%
  - low 0.0%
- Average carbon that can be sequestered: 0.075 tons/yr/ha

# Rangeland Potentials -- Summary excluding WY

- 31.5 million hectares could be classified as rangeland cover types – non-federal
- Average carbon that can be sequestered: less than 0.060 tons/yr/ha

# Phase I

## Advanced Concepts for Implementation Readiness

- Carbon Markets
- Economic Analysis
- Regional Energy Analysis
- MMV activities

# Objective of Carbon market Component

- Provides an opportunity for landowners, corporations, tribal and local governments to participate in a market-based conservation program
- Offers industry a cost-effective way to achieve their carbon dioxide emission reduction goals
- Transfer of carbon credit rights is a new marketable commodity that provides landowners and communities a new source of revenue

# NCOC's Documents for Phase I

NCOC has completed

- The project planning handbook;
- project planning forms;
- listing agreements;
- contracts;
- vintage credit portfolio design;
- assessment of forestry & agroforestry potential in the region;
- and volume tables for key agroforestry species (contained in the handbook).

# External Coordinating Efforts

- established a **regional technical assistance and outreach network** for private and state lands and a **national network** for tribal lands.

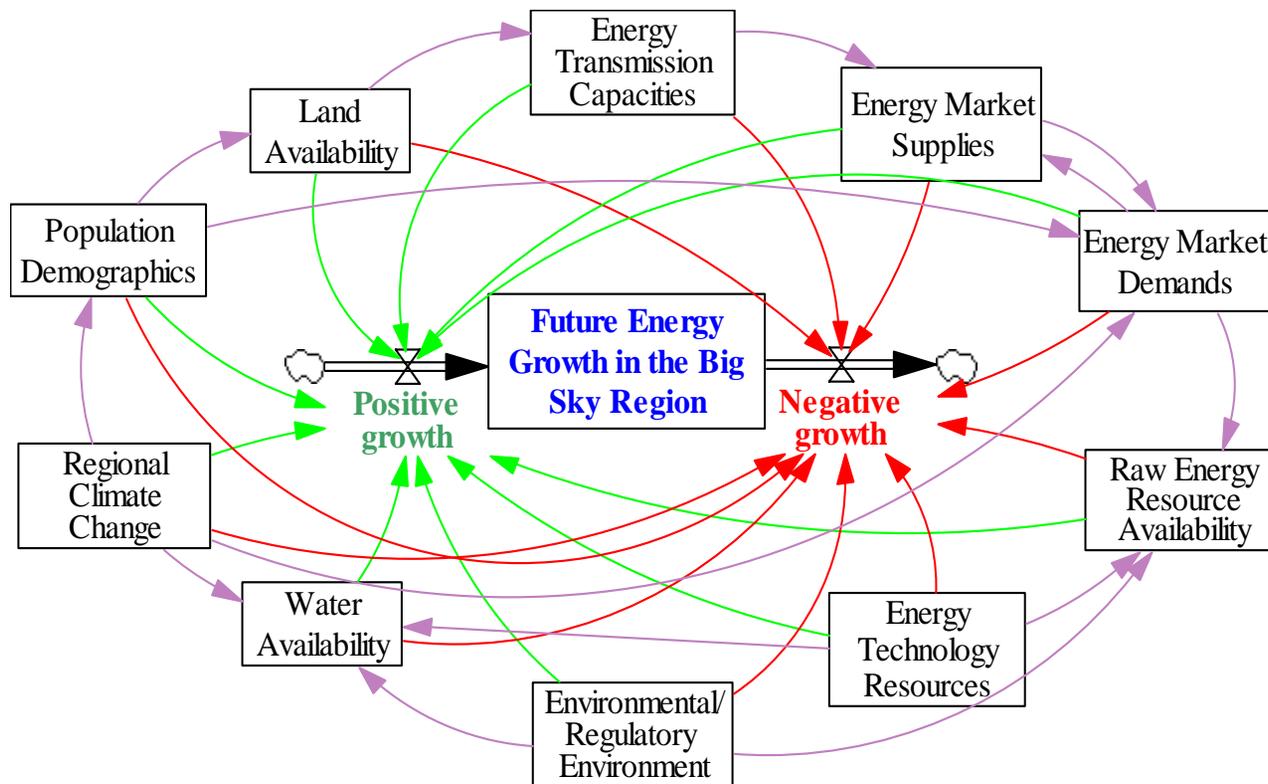

*The network will be used to obtain pilot projects with landowners' field test all aspects of the proposed trading system in phase II.*

- established a **technical standards committee.**

*The committee representing private and public natural resource technical professionals, state and tribal staff, university researchers and financial advisors will recommend the final portfolio protocols (project categories and definitions) to be followed in phase II.*

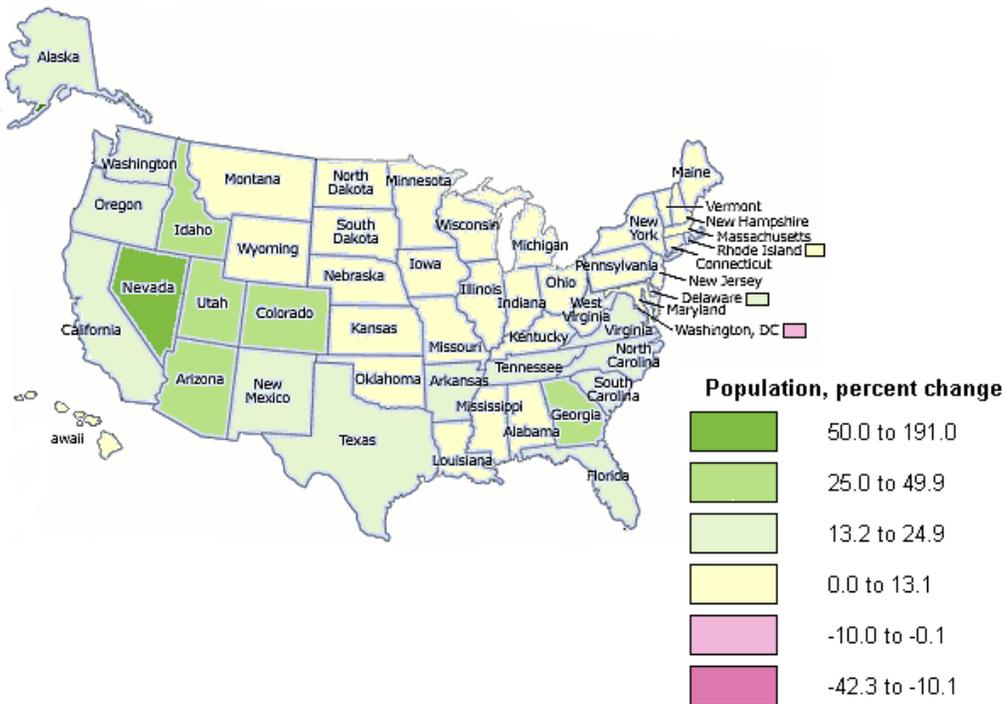

# Regional Energy Growth Assessment

- Complex dynamic process with many factors and policy drivers

# Big Sky Regional Population Growth

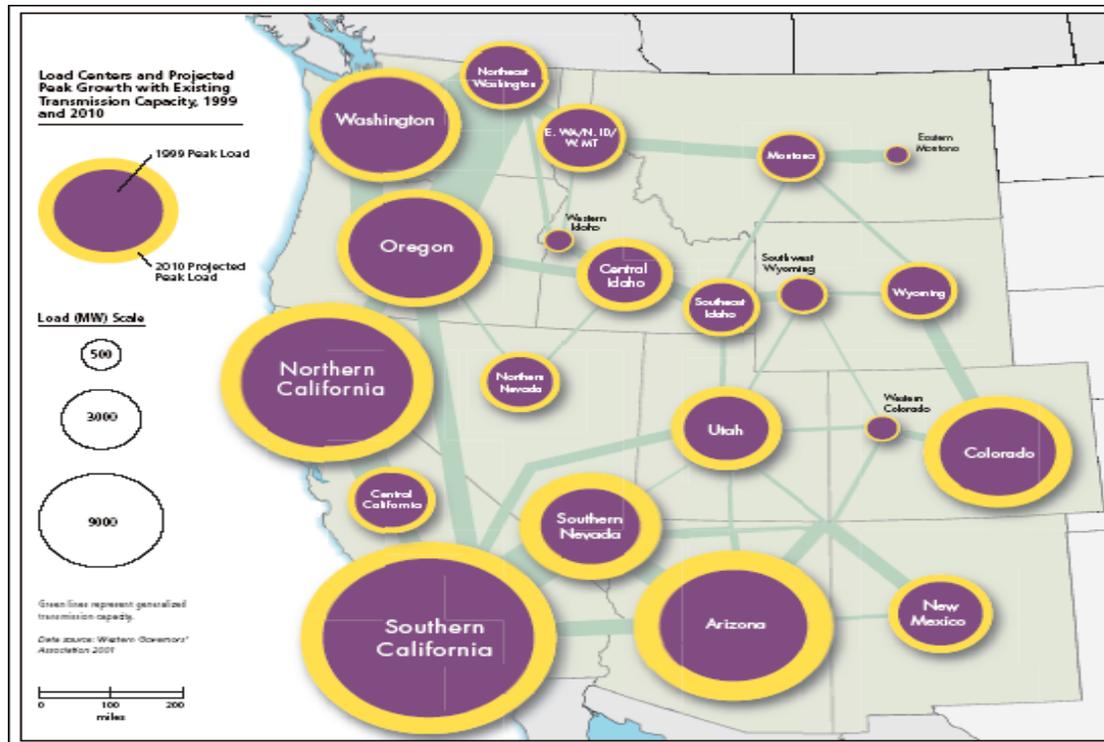

- Western states are the fastest growing region in the U.S.

Expanding populations + Growing economies = Increased energy demand

# Energy Transmission Infrastructure

- The Big Sky region is central to many load centers, but is currently constrained by transmission capacity

# Phase II: regional energy analysis will be coupled to the capacity for sequestration

- Evaluate key factors affecting energy growth
- Understand relationship between variables
- Build dynamic economic/policy analysis model
- Benchmark model to energy demand models
- Couple model to GIS database interface
- Collaborate with regional policy centers
- Support state and regional energy planning

# MMV activities

- Storage capacity needs to be matched with storage integrity
- coordinate MMV outputs with the following actions:
  - Regulatory Operations and Compliance,
  - Community Outreach and Communications,
  - GIS Systems and Predictive Applications and
  - Economic and Risk Assessment Modeling—making better decisions.

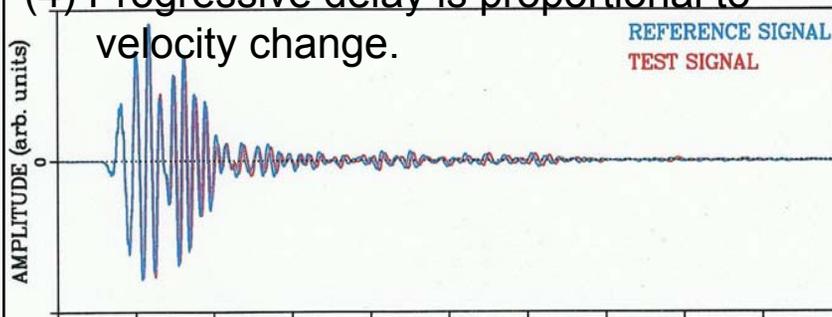

# Seismic MMV Methods

## • Active Doublet Method

**Objective:** Measure very small ( $< 1\%$ ) velocity changes occurring over time due to  $\text{CO}_2$  movement.

**Procedure:**

- (1) Record signals from permanent source-receiver pairs.
- (2) Repeated recordings at different times are “doublets”.
- (3) Analyze relative progressive signal delay of doublets.
- (4) Progressive delay is proportional to velocity change.

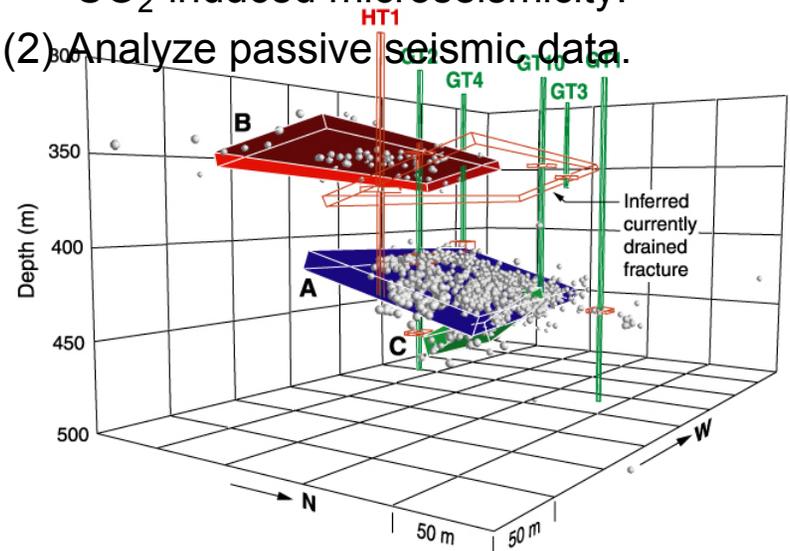

## • Passive Seismic Method

**Objectives:** Map fluid flow paths, monitor reservoir deformation and cap rock integrity.

**Procedure:**

- (1) Place borehole seismometers at reservoir depth for months to record  $\text{CO}_2$ -induced microseismicity.
- (2) Analyze passive seismic data.

# MMV Integrated Plan

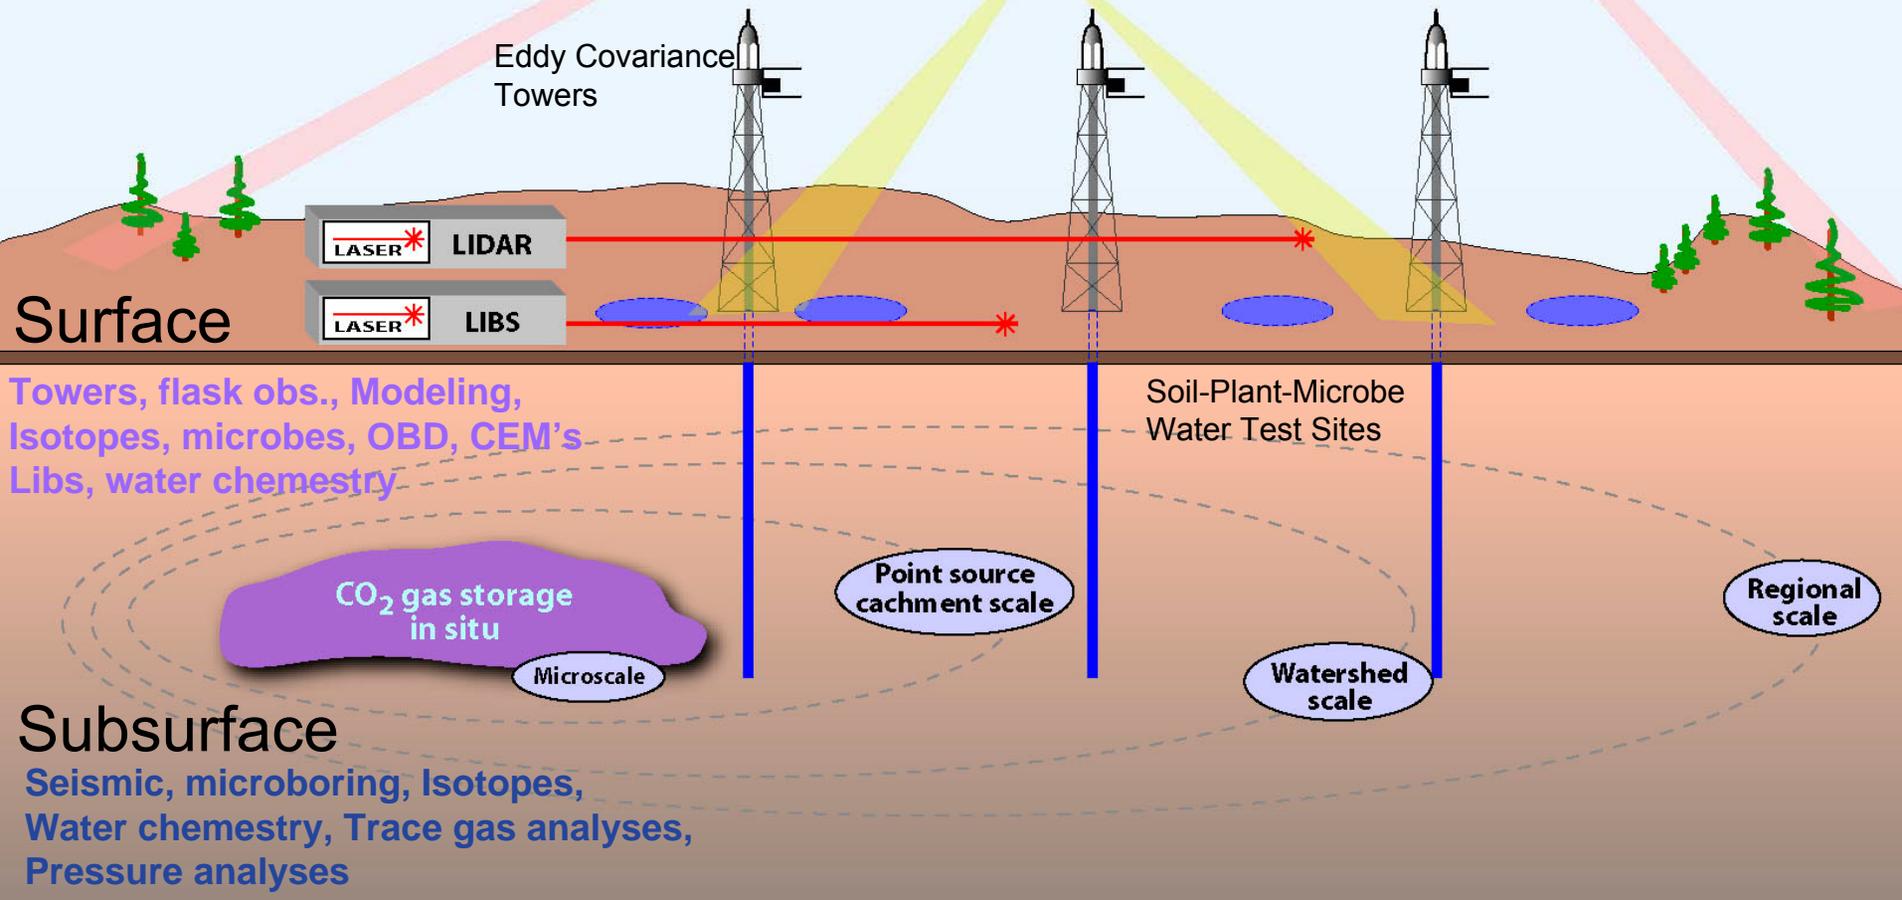

**Global coverage**  
Satellite, Modeling, Remote sampling  
MODIS < Nimbus 7  
GCM models  
Climate stations (ARM, NOAA)

## Atmosphere

Satellite, Aircraft, Towers, Modeling,  
Isotopes, FTIR, Lidar

## Regional coverage

Aircraft, LES modeling, Remote sampling  
MODIS, Nimbus 7  
GCM models, Flux networks

# Phase I

## Public education and Outreach

# Approach

- Materials Development (Action Plan, Web Site, Poster, Fact Sheets, etc.)
- Discussions/Roundtables with Key Decision Makers:
  - State Govt and Sequestration Advisory Committees
  - Environmental NGOs
  - Tribal Council Leaders
  - Economic Development Groups
  - Departments of Environmental Quality and EPA

# Approach

- Establish Web Networks to Disseminate Information
  - Access to about 800 people
- Establish CO<sub>2</sub> Networks
- Workshops/Symposia
- News Coverage

# Web page

# Score card

- Presentations: 48
- Poster Sessions: 10
- Workshops/Symposia: 8
- Stakeholder Meetings: 21
- External News Articles: 9
- Internal News Articles: 5

# Lessons

- Climate change is 800 lb gorilla
- Sequestration associated with terrestrial and opportunities for farmers and foresters
- General interest in geologic - some skepticism, little overt hostility
- Questions about permanence/safety
- Economic development matters a lot

# REGIONAL CARBON PARTNERSHIPS PROGRAM OVERVIEW

OCTOBER 12, 2005

**Big Sky**  
CARBON SEQUESTRATION  
PARTNERSHIP
