Abstract

The 200 Kw PC25 is the world's first commercially available fuel cell. These power plants have been purchased, installed and successfully operated by members of the North American Fuel Cell Owners Group (NAFCOG), which includes major gas and electric companies in the United States and Canada, as well as the Department of Defense and the National Rural Electric Cooperative Association. The real world experiences of siting, installation, and operation will be covered, including the latest marketing issues. It is hoped that the lessons learned by the NAFCOG provide insights valuable to future PC25 production units and for other types of emerging fuel cell technologies.
