Process Documentation File

Chip Truck

The construction requirements to build a container truck for the transportation of the biomass

Tracked Output Flows:

Corn Grain

Corn grain delivered to the energy conversion facility

Section II: Process Description

Associated Documentation

This unit process is composed of this document and the data sheet (DS) *DS_CTG_Biomass_CornGrain_2011.02.xls*, which provides additional details regarding relevant calculations, data quality, and references.

Goal and Scope

The scope of this unit process covers all aspects of raw material acquisition (RMA) and raw material transportation (RMT) to the energy conversion facility as seen in **Figure 1**. At the end, one kilogram of corn grain is delivered to the life cycle (LC) Stage #3 boundary. The RMA and RMT are discussed separately below.

Figure 1: Plan for RMA and RMT of Corn Grain

Boundary and Description

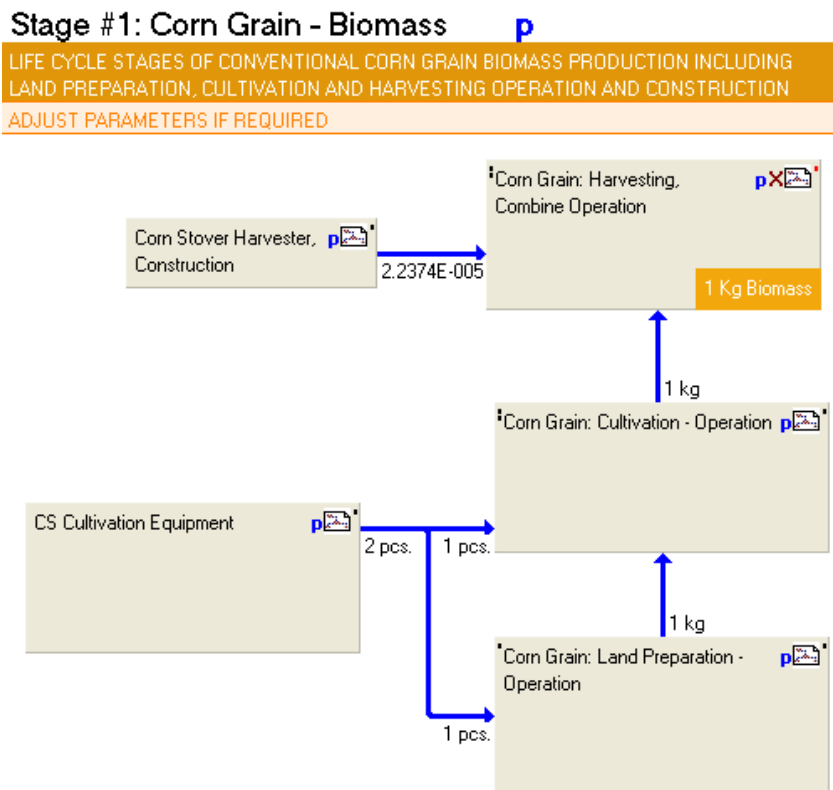

LC stage #1, raw material acquisition of corn grain, includes land preparation for the corn production, cultivation of corn grain, and the harvesting and storing of the corn grain. Most of the data used in the formation of the operation processes are from states in the U.S. Midwest.

The RMA of corn grain includes the construction of the machinery needed for RMA operation processes. Within the machinery construction, upstream processes (for example, steel or rubber) are included. The plan for RMA of corn grain is provided in **Figure 2**.

The biomass processes are set up slightly differently than some of the other feedstocks. Unlike other RMA pathways, biomass has a set order of operations for its production. The product from one process is the input to another process, which then lends itself to assembly of the model in series.

Each of the operations uses a distinct set of machinery, and each piece is constructed as many times as needed during the study period. For the operation processes, each requires diesel fuel and calculates the emissions based on the diesel consumed. The cultivation process also includes the production and application of different fertilizers (potassium, nitrogen, and phosphorus).

Figure 2: Plan for RMA of Corn Grain, Including Land Preparation, Cultivation and Harvesting and Storage

The construction processes for machinery contain all of the machinery needed for the initial clearing of the site, cultivation, and harvesting of the corn grain. The machinery includes:

- Tiller
(DS/DF_Stage1_C_Tiller_5015_lbs_TractorPropelled_2009.01.doc)
- Tractor
(DS/DF_Stage1_C_Diesel_Tractor_165_HP_2009.01.doc)
- Seeder
(DS/DF_Stage1_C_Diesel_Forage_Harvester_615_HP_2010.01.doc)
- Harvester
(DS/DF_Stage1_C_Harvester_300_Bushel_Capacity_2009.01.doc)

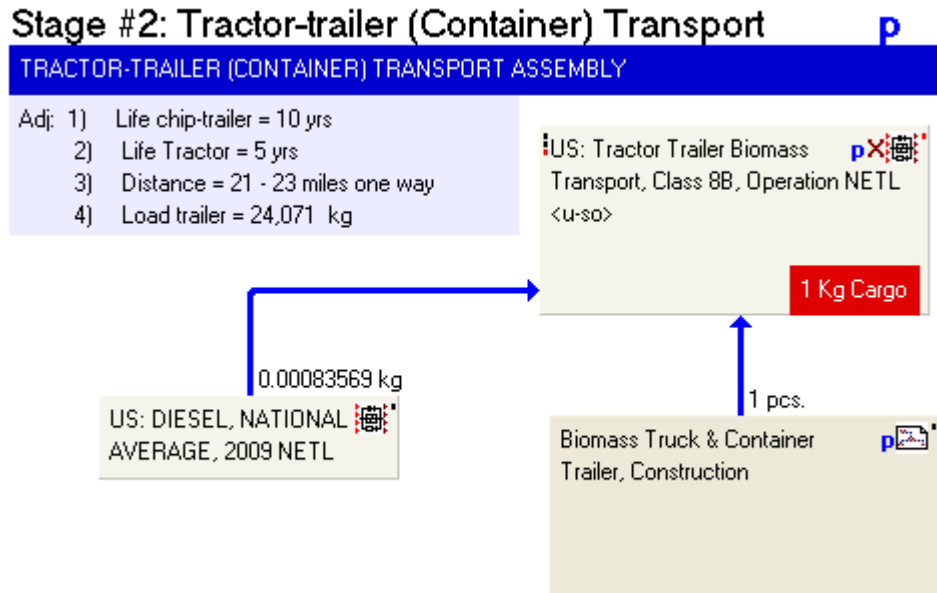

Each piece of equipment is scaled to the production of one kilogram of corn grain accounting for the lifetime of each piece of equipment, as relevant. The profiles and processes included in RMA are provided in **Table 1**. Those shown in bold face were developed by NETL.

LC Stage #2 (RMT) includes the transport of the corn grain from the farm to the energy conversion facility (LC Stage #3). The construction of equipment used to transport corn grain and the operation of that equipment are the two processes within RMT. Corn grain transport takes place via a chip truck that is suitable for the transport of corn grain and powered by diesel. The transport distance is an adjustable parameter for RMT. The plan for RMT of corn grain is provided in **Figure 3**.

Figure 3: Plan for RMT of Corn Grain, Including Construction and Operation of Profiles for Transport

Construction of the train for RMT includes the materials required to construct the following piece of equipment for transport:

- Container/Chip Truck
 (DS/ DF DF_Stage2_C_Chip_Truck_Biomass_Transport_2010.01.doc)

The profiles and processes included in RMT are provided in **Table 2**. Those shown in bold face were developed by NETL.

Parameters and Balances

The parameters for the highest level modeling plans for RMA and RMT of corn grain are shown in **Table 3**. These parameters may or may not include the adjustable parameters shown previously, based on how the model was created. **Table 4** presents the input and output balances for resources and emissions of interest for the cradle-to-gate plan as well as each of the RMA and RMT plans.

Table 3: Adjustable Parameters for RMA and RMT of Corn Grain

Plan	Parameter	Value	Comment
LC Stage #1			
Stage #1: Corn Grain - Biomass	acres_yr	652070	[acre/yr] Assumed size of farm is 500 acres (just to cal. individual stage results).
Stage #1: Corn Grain - Biomass	biomass_yield	3829	[kg/acre-year] Adjustable parameter. Biomass yield is determined by type of biomass
LC Stage #2			
Stage #2: Tractor-trailer (Bale) Transport	Load_Trailer	22801	[kg] Maximum weight of corn grain transported by 1 trailer load.
Stage #2: Tractor-trailer (Bale) Transport	S2_TRK_DIST	33	[miles] adjustable parameter for distance from Origin to Destination.

Table 4: Inputs and Output Balances for Cradle-to-Gate, RMA, and RMT of Corn Grain (kg/kg delivered)
