

Section II: Process Description

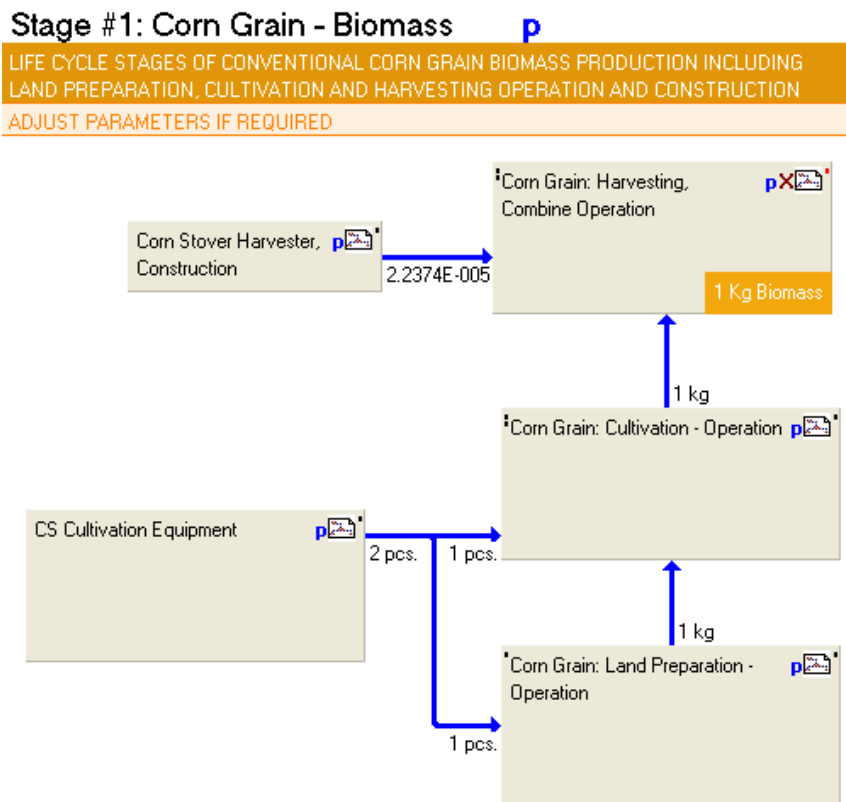

Associated Documentation

This unit process is composed of this document and the data sheet (DS) *DS_RMA_Biomass_CornGrain_2011.02.xls*, which provides additional details regarding relevant calculations, data quality, and references.

Goal and Scope

The scope of this unit process covers all aspects of raw material acquisition (RMA) as seen in **Figure 1**. At the end, one kilogram of corn grain is has been cultivated and produced and ends at the boundary of life cycle (LC) Stage #2.

Figure 1: Plan for RMA of Corn Grain, Including Land Preparation, Cultivation and Harvesting, and Storage

Boundary and Description

LC Stage #1, raw material acquisition of corn grain, includes land preparation for the corn production, cultivation of corn grain, and the harvesting and storing of the corn grain. Most of the data used in the formation of the operation processes are from states in the U.S. Midwest.

The RMA of corn grain includes the construction of the machinery needed for RMA operation processes. Within the machinery construction, upstream processes (for example, steel or rubber) are included. The plan for RMA of corn grain is provided in **Figure 1**.

The biomass processes are set up slightly differently than some of the other feedstocks. Unlike other RMA pathways, biomass has a set order of operations for its production. The product from one process is the input to another process, which lends itself to assembly of the model in series. Each of the operations uses a distinct set of machinery, and each piece is constructed as many times as needed during the study period. For the operation processes, each requires diesel fuel and calculates the emissions based on the diesel consumed. The cultivation process also includes the production and application of different fertilizers (potassium, nitrogen, and phosphorus).

The construction processes for machinery contain all of the machinery needed for the initial clearing of the site, cultivation, and harvesting of the corn grain. The machinery includes:

- Tiller
(DS/DF_Stage1_C_Tiller_5015_lbs_TractorPropelled_2009.01.doc)
- Tractor
(DS/DF_Stage1_C_Diesel_Tractor_165_HP_2009.01.doc)
- Seeder
(DS/DF_Stage1_C_Diesel_Forage_Harvester_615_HP_2010.01.doc)
- Harvester
(DS/DF_Stage1_C_Harvester_300_Bushel_Capacity_2009.01.doc)

Each piece of equipment is scaled to the production of one kilogram of corn grain accounting for the lifetime of each piece of equipment, as relevant. The profiles and processes included in RMA are provided in **Table 1**. Those shown in bold face were developed by NETL.

Parameters and Balances

The parameters for the highest level modeling plan for RMA of corn grain are shown in **Table 2**. These parameters may or may not include the adjustable parameters shown previously, depending on how the model was created. **Table 3** presents the input and output balances for resources and emissions of interest for the RMA plan.

Table 2: Adjustable Parameters for RMA of Corn Grain

Plan	Parameter	Value	Comment
<i>LC Stage #1</i>			
Stage #1: Corn Grain - Biomass	acres_yr	652070	[acre/yr] Assumed size of farm is 500 acres (just to cal. individual stage results).
Stage #1: Corn Grain - Biomass	corn_yield_yr	3829	[kg/acre-year] Adjustable parameter. Biomass yield is determined by type of biomass
