Associated Documentation

This unit process is composed of this document and the data sheet (DS) *DS_RMA_NaturalGas_USMix2010_2012.01.xls*, which provides additional details regarding relevant calculations, data quality, and references.

Goal and Scope

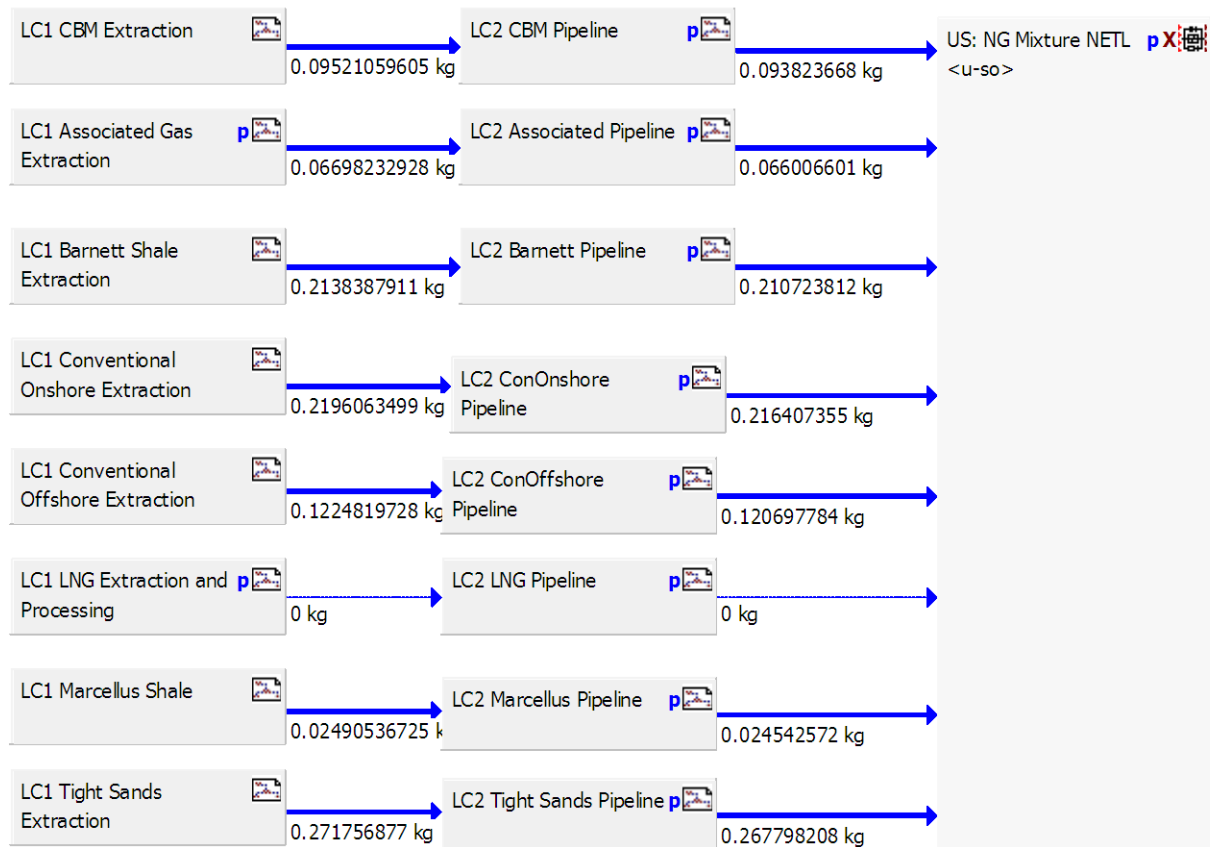

The scope of this unit process covers all aspects of raw material acquisition (RMA) and is seen in **Figure 1**. At the end, one kilogram of natural gas is delivered to the life cycle (LC) Stage #2 boundary.

Figure 1: Plan for RMA and RMT of Natural Gas

Natural Gas RMA/RMT

GaBi 4 process plan:Reference quantities

Boundary and Description

LC Stage #1, RMA of natural gas includes the ability to have extraction by coalbed methane, associated gas, Barnett shale, Marcellus shale, conventional onshore, convention offshore, Marcellus shale, tight sands, and the importation of liquefied natural gas (LNG). The natural gas is processed and put into a pipeline for transportation. The mixture shown in this process is the 2010 domestic mix and therefore does not include LNG.

Construction of the wells and pipelines are included. The upstream profiles for concrete and steel are rolled up into this process.

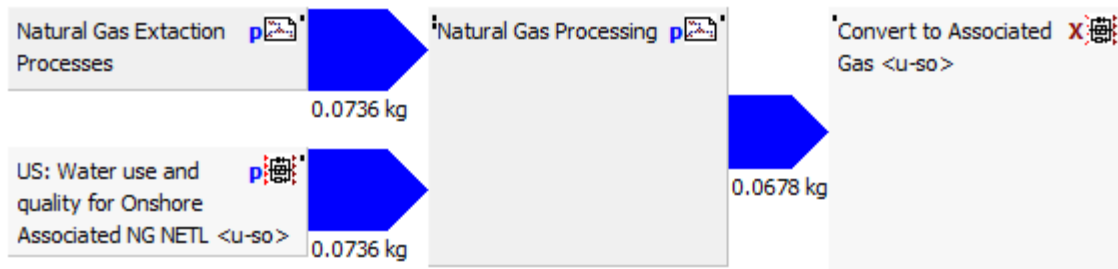

An example plan is provided in **Figure 2**. Overall plans for extraction and processes were created. For each method of extraction, additional processes were added as needed for water issues or any additional transportation of the crew in the case of offshore extraction.

The construction process for both machinery and facilities were created and resulted in the following process:

(DS/DF_Stage1_C_Natural_Gas_Well_Generic_2011.01.doc)

Each piece of equipment or facility is scaled to the production of one kilogram of natural gas. The profiles and processes included in RMA are provided in **Table 1**. Those shown in bold face were developed by NETL.
