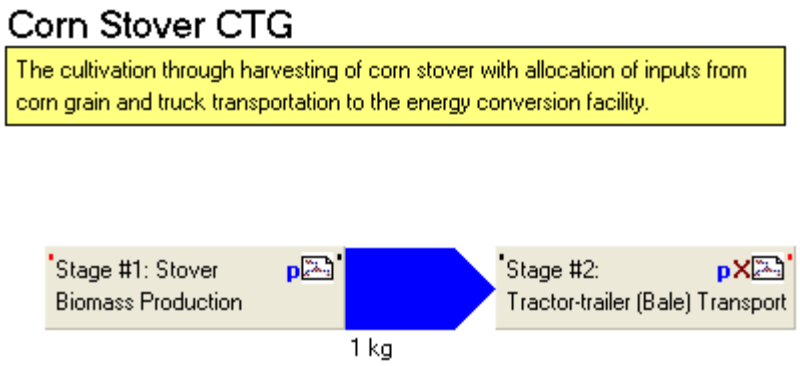
Associated Documentation

This unit process is composed of this document and the data sheet (DS) *DS_CTG_Biomass_CornStover_2011.02.xls*, which provides additional details regarding relevant calculations, data quality, and references.

Goal and Scope

The scope of this unit process covers all aspects of raw material acquisition (RMA) and raw material transportation (RMT) to the energy conversion facility as seen in **Figure 1**. At the end, one kilogram of corn stover is delivered to the life cycle (LC) Stage #3 boundary. The RMA and RMT are discussed separately below.

Figure 1: Plan for RMA and RMT of Corn Stover



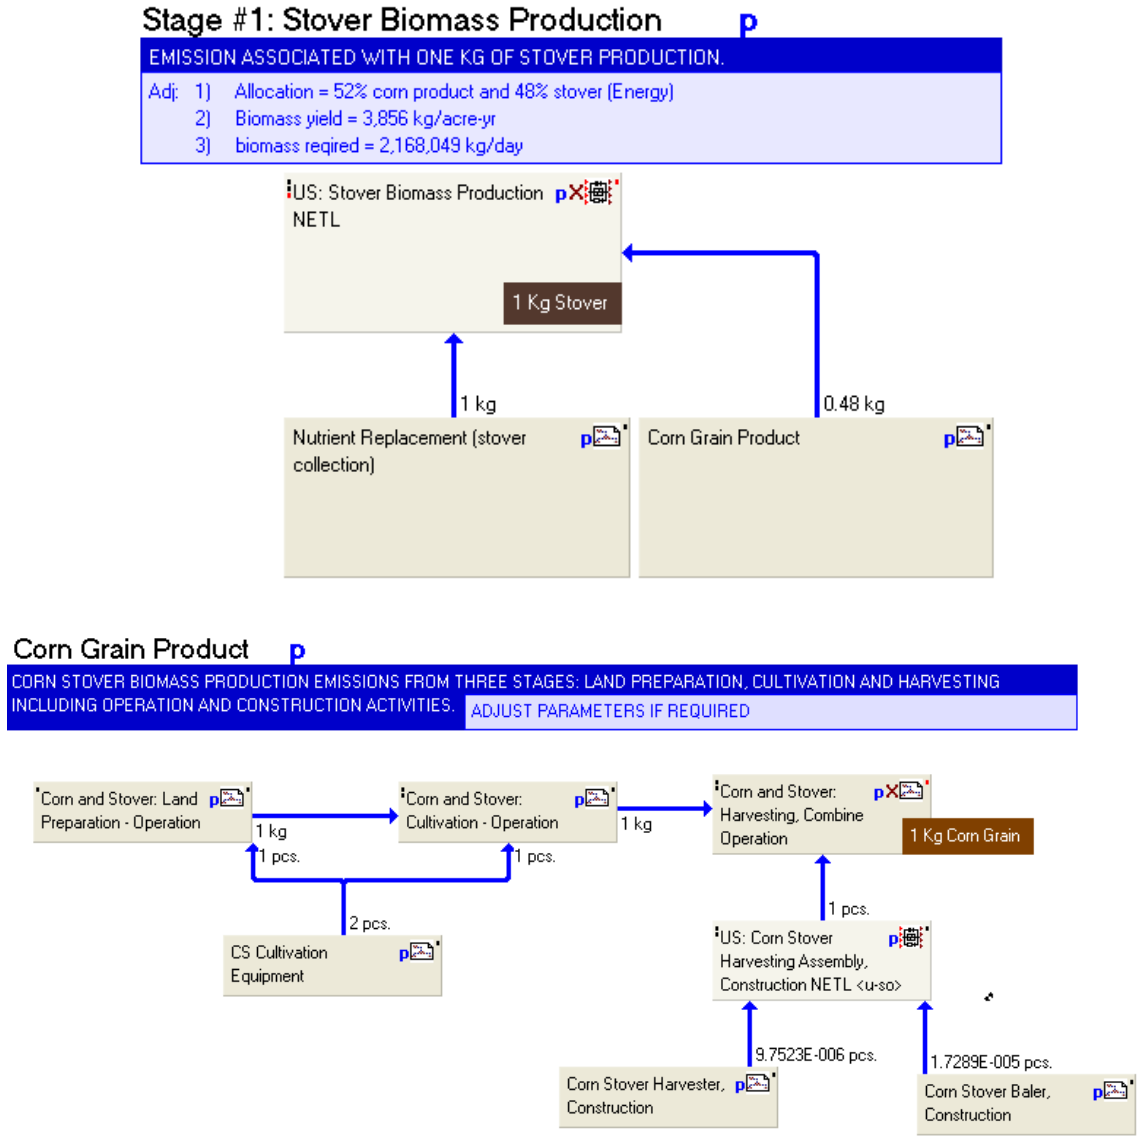
Boundary and Description

LC Stage #1, raw material acquisition of corn stover, includes land preparation for corn and corn stover production, cultivation of the corn and corn stover, and the harvesting

and storing of the corn stover. Most of the data used in the formation of the operation processes are from states in the U.S. Midwest.

The RMA of corn stover includes the construction of machinery needed for RMA operation processes. Within the machinery construction, upstream processes (for example, steel or rubber) are included. The plan for RMA of corn stover is provided in **Figure 2**.

Figure 2: Plan for RMA of Corn Stover, Including Land Preparation, Cultivation and Harvesting and Storage



The biomass processes are set up slightly differently than some of the other feedstocks. Unlike other RMA pathways, biomass has a set order of operations for its production. The product from one process is the input to another process, which then lends itself to

assembly of the model in series. Each of the operations uses a distinct set of machinery, and each piece is constructed as many times as needed during the study period. For the operation processes, each requires diesel fuel and calculates the emissions based on the diesel consumed. The cultivation process also includes the production and application of different fertilizers (potassium, nitrogen, and phosphorus).

The construction processes for machinery contain all of the machinery needed for the initial clearing of the site, cultivation, and harvesting of the corn stover. The machinery includes:

- Tiller

- Tractor

- Baler

Each piece of equipment is scaled to the production of one kilogram of corn stover, accounting for the lifetime of each piece of equipment, as relevant. The profiles and processes included in RMA are provided in **Table 1**. Those shown in bold face were developed by NETL.

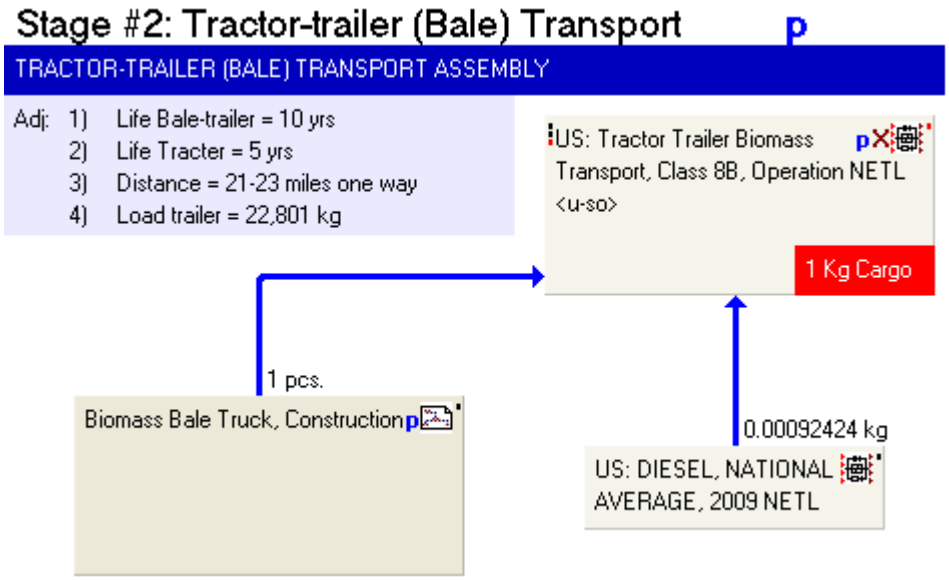
LC Stage #2 (RMT) includes the transport of the corn stover from the farm to the energy conversion facility (LC Stage #3). The construction of equipment used to transport corn stover and the operation of that equipment are the two processes within RMT. Corn stover transport takes place via a bale truck that is suitable for the transport of corn stover and powered by diesel. The transport distance is an adjustable parameter for RMT. The plan for RMT of corn stover is provided in **Figure 3.**

Figure 3: Plan for RMT of Corn Stover, Including Construction and Operation of Profiles for Transport



Construction of the train for RMT includes the materials required to construct the following piece of equipment for transport:

- Bale Truck
