(2) **Treatable water exists.** Except as provided in (p) of this Section for converting a well to a water well, the wellbore shall be filled with cement as follows:
(A) If there is no surface casing or the base of the surface casing is 25 feet or further above the base of the treatable water, the wellbore shall be filled with cement from a depth of at least 50 feet below the base of the treatable water to a depth the lesser of:
(i) Fifty feet above the base of treatable water; or
(ii) Three feet below surface.
(B) If the surface casing is set at or below the base of the treatable water, the wellbore shall be filled with cement from a depth of at least 50 feet below the base of the surface casing to a depth the lesser of:
(i) Fifty feet above the base of the surface casing; or
(ii) Three feet below surface.
(C) If the cement plug prescribed by (2) of this subsection is not sufficient to bring the level of cement to within three feet from the surface, then the wellbore shall be filled with cement from a depth of at least 30 feet to a depth of three feet from the surface.
(k) **Cutting off surface pipe and identification of the abandoned wellbore.**

(1) This subsection applies to a wellbore plugged for abandonment. It does not apply to a wellbore plugged back for conversion to a water well under (p) of this Section.
(2) After setting the top plugs in a well, the operator shall cut off the casing left in the wellbore three feet below surface, and the operator shall cap the casing in the wellbore with a steel plate.
(3) The operator shall inscribe or embed the well number and date of plugging on the steel plate.

(l) **Tagging the top of the plug.** The Field Inspector for the Conservation Division may require the operator to determine the depth of the top of a plug by running a wireline or tubing string.

(m) **Fall back of cement.** If the cement for a plug falls back during setting below the top depth required by this Section, the operator shall run additional cement until the plug meets the minimum requirements of this Section.

(n) **Alternative plugging procedure for down-hole problems.**
(1) In plugging a well, if the operator encounters a downhole problem which prevents the operator from complying with the standards of this Section, the District Manager may prescribe an alternative plugging procedure provided that the alternative plugging procedure prevents the vertical migration in the wellbore of oil, gas, saltwater, H_2S, and other deleterious substances into a formation bearing oil, gas, or treatable water.
(2) The District Manager shall note his approval of the alternative plugging procedure on the well's Plugging Report (Form 1003).

(o) **Plugging of rat holes and mouse holes.** If a rat hole or mouse hole was used at the surface for drilling the well, it shall be plugged as follows.
(1) The hole shall be filled with drilling mud from bottom to a depth eight feet below the surface.
(2) The operator shall fill the hole with cement from a depth of eight feet to a depth of three feet below the surface.
(3) The operator shall fill the hole with dirt from a depth of three feet to surface.

(p) **Plug back for conversion to a water well.** The District Manager may permit a well operator to plug back a well for permanent use as a water well by:
(1) Setting any bottom hole and intermediate plugs required by this Section.
(2) Setting a top cement plug from the base of treatable water to 50 feet below the base of treatable water.
(3) Obtaining written permission from the owner of the ground water rights for conversion of the well to a water well.
(4) Submitting under 165:10-11-7, a Plugging Report (Form 1003) noting the conversion of the well with a copy of the written permission from the owner of the ground water rights for conversion of the well to a water well.

[**SOURCE:** Amended at 13 Ok Reg 2395, eff 7-1-96; Amended in Rule Making 97000002, eff 7-1-97; Amended in Rule Making 980000013, eff 7-15-98; Amended in Rule making 980000034, eff 7-1-99; Amended in Rule Making 200200017, eff 7-1-02]

165:10-11-7. Plugging record

(a) Within 30 days after plugging a well, the owner or operator of the well shall submit for the well in duplicate to the appropriate District Office of the Conservation Division:
(1) Plugging Record (Form 1003).
(2) Cementing Report (Form 1003C) to accompany Plugging Record (Form 1003).
(3) If a Completion Report (Form 1002A) has not been submitted for the well, Form 1002A shall be attached to the Form 1003.

(b) Any operator failing to comply with this Section may be fined up to $500.00.

[**SOURCE:** Amended at 9 Ok Reg 2295, eff 6-25-92; Amended in Rule Making 97000002, eff 7-1-97]

165:10-11-8. Procedures for identification and control of wellbores in which radioactive sources have been abandoned

(a) **Notice and permission to abandon.**

(1) When a radioactive source has been lost and abandoned in a well bore, the operator shall immediately notify the appropriate District Office and request permission to plug or plug-back and/or bypass to conform to the conditions set out in this Section. The District Manager or his designee may exercise the option of witnessing the procedure.

(2) A radioactive source shall not be considered abandoned until all reasonable efforts have been expended to retrieve the source.

(b) **Method of plugging.**

(1) Wells in which radioactive sources have been abandoned shall be mechanically equipped and plugged in such a manner so as to prevent either accidental or intentional mechanical disintegration of the radioactive source.

(2) When a radioactive source has been lost in a well bore and cannot be recovered, the tool shall be covered with a 100 foot plug consisting of standard oil field cement with an approved deflection tool cemented in place at the top of the plug. An additional 100 foot plug colored by red iron oxide shall be run on top of the deflection tool.

(c) **Approval for alternate plugging method.** When an operator, after expending all reasonable efforts, finds that it is not possible to abandon the source as prescribed in (d) of this Section, an alternate plugging procedure must be approved by the Commission prior to use.

(d) **Markers for wells in which a radioactive source has been abandoned.** Upon abandonment of a well in which a radioactive source has been abandoned, and the abandonment procedure has been approved by the Commission, the operator shall cause a permanent plaque to be attached to casing remaining in the well. The plaque shall be attached in such a manner that reentry could not be accomplished without disturbing it. The plaque shall be constructed of a long lasting material and shall contain the following information:

(1) Lease name and well number.
(2) Name of operator.
(3) The source material abandoned.
(4) Total depth of the well.
(5) The depth of the abandoned source.
(6) The date of abandonment.
(7) The activity of the source.
(8) Trefoil radiation symbol with a radioactive warning.

(e) **Plugging reports of wells with lost radioactive sources.** Two copies of the plugging report shall be submitted to the Conservation Division of the Commission. The well operator shall forward one copy to the Radiation Management Section of the Oklahoma Department of Environmental Quality. The report shall contain all of the information required in (d) of this Section. The fact that a radioactive source was abandoned in the wellbore shall be noted under remarks on the Form 1002A.

(f) **Record of abandoned radioactive sources.** The Commission will maintain a current listing of all wells in which radioactive sources have been abandoned.

[**SOURCE:** Amended at 9 Ok Reg 2337, eff 6-25-92; Amended in Rule Making 97000002, eff 7-1-97]

165:10-11-9. Temporary exemption from plugging requirements

(a) **Scope.** The Commission may permit any well which is required to be properly abandoned pursuant to OAC 165:10-11-3 and OAC 165:10-11-5, at the request of an operator, to be temporarily abandoned.

(b) **Application.** An application for a permit to temporarily exempt a well from the plugging requirement shall be made on Form 1003A completed in its entirety, and submitted to the appropriate Conservation Division's District Office.

(c) **Permit.**

(1) Any operator seeking approval for temporary abandonment shall submit a notice of intent to temporarily abandon the well, Form 1003A, to the

appropriate District Office describing the temporary abandonment procedure used.

(2) The permit will be valid for a period of five (5) years. At least 30 days prior to the expiration of any approved temporary abandonment permit, the operator shall return the well to beneficial use in accordance with Commission rules, permanently plug and abandon said well, or apply for a new permit to temporarily abandon the well.

(3) No temporary abandonment will be approved that does not prevent the contamination of treatable water and/or other natural resources and the leakage of any substance at the surface.

(4) If the well fails the tests required herein the problem shall be found, corrected and a new test successfully conducted within 30 days or the well shall be plugged and abandoned in accordance with Commission rules.

(5) Upon successful completion of the work on the temporarily abandoned well, the operator will submit a new request for temporary abandonment to the appropriate District Office.

(d) **Protection of treatable water.** The treatable water shall be protected by one or more of the following:

(1) A drillable, retrievable or temporary bridging plug set above the producing interval and below the top of the cement. The surface shall be capped with a valve in operational condition. A pressure test may be required by the appropriate District Office.

(2) A packer run on tubing and set above the producing interval and below the top of the cement. The well shall be equipped with suitable wellhead packoff equipment and be closed to the atmosphere.

(3) A fluid level test determined by use of equipment approved by the Conservation Division’s Field Operations Department. The fluid level must be no higher than 150 feet below the base of the treatable water. The Field Inspector shall be notified at least 48 hours beforehand to be afforded the opportunity of witnessing the procedure. Fluid level tests must be conducted annually each of the five (5) years during the anniversary month of the permit. Additional tests may be required at any time at the request of the Conservation Division’s Field Operations Department. The wellhead shall be closed to the atmosphere.

(4) A casing inspection log confirming the mechanical integrity of the production casing submitted to the appropriate Conservation Division’s District Office.

(5) Alternate methods of testing may be approved by the Conservation Division’s Field Operations Department by written application and upon showing that such a test will provide information sufficient to determine that the well does not pose a threat to natural resources.

(e) **Surface facilities.** The well site of a well with temporary exemption from the plugging requirements shall be kept in a neat and orderly manner with a legible sign showing the name of the operator, operator telephone number, well name, number, and the legal location.

(f) **Termination of permit.** The permit for a temporary exemption from plugging shall terminate and plugging operations shall commence within 30 days after:

(1) The time interval set has lapsed and a renewal has not been granted.

(2) The lease or unit on which the exempted well was located has become nonproductive.

(3) The fluid level has risen to a point less than 150 feet below the base of the treatable water.

(4) The Conservation Division’s Field Operations Department has determined that the surface area or wellhead equipment requirement does not meet the standards required by the Commission.

(g) **Exception to termination of permit.** An exception to the termination of an exemption from the plugging requirements shall be allowed if:

(1) An application to convert the well to a disposal, injection, or supply well has been filed with the Commission, and proper notice, according to OAC 165:5, has been met.

(2) An application requesting an exception to the plugging rules has been filed with the Commission and an exception has been granted by an order of the Commission.

[BLANK PAGE]

SUBCHAPTER 13. DETERMINATION OF ALLOWABLES – OIL AND GAS WELLS

Section

[BLANK PAGE]

165:10-13-1. Oil and gas production [RESERVED]

165:10-13-2. Classification of wells for allowable purposes

(a) For purposes of this Subchapter the terms gas, oil, and gas-oil ratio are defined in 165:10-1-2.
(b) Any well having a gas-oil ratio of 15,000 to one or more shall be classified as a gas well for allowable purposes.
(c) Any well having a gas-oil ratio of less than 15,000 to one shall be classified as an oil well for allowable purposes.
(d) If a well is a multiply completed well under 165:10-3-35, then each zone of the completion shall be classified separately for allowable purposes.
(e) If a well is commingled under 165:10-3-39, the classification of the well for allowable purposes shall be determined by the gas-oil ratio of the commingled production.

165:10-13-3. Production tests on new, re-entered, and recompleted wells

(a) On all new wells, re-entered wells, and recompleted wells classified as oil wells for allowable purposes, in any regular spacing unit(s) and reservoir dewatering oil spacing unit(s), initial production tests shall be performed and reported to the Commission on Form 1029A unless otherwise specified by order of the Commission. The test shall not commence until after recovery of a volume of oil equivalent to or greater than the amount of load oil or other liquids introduced into the well.
(b) On all new wells, re-entered wells, and recompleted wells classified as gas wells for allowable purposes, initial production tests shall be performed and reported to the Commission on Form 1016 unless otherwise specified by order of the Commission.
(c) If special pool rules prescribe, by order of the Commission, the manner in which production tests are to be performed in any separate common source of supply, the production or gas-oil ratio test shall be performed and reported to the Commission in accordance with such special pool rules.

[**SOURCE:** Amended in Rule Making 200100009, eff 7-1-02]

165:10-13-4. Reservoir performance tests

The Commission may require, from time to time, the presentation of such data and facts as may be necessary to indicate reservoir performance and conditions in any oil or gas pool. The Commission may witness or supervise the taking of such reservoir performance tests and keep such records as it deems necessary to properly regulate the operation of any oil or gas pool. Any test requested by the Commission may be witnessed by any operator in the pool. When special pool rules require bottom hole pressure tests, the tests shall be reported to the Conservation Division on Form 1027.

165:10-13-5. Most efficient rate

Subject to the procedural requirements of 165:5-7-12, the Commission may issue an order increasing or decreasing the rate of oil and gas production in an oil pool to correspond to the most efficient rate of production which is consistent with sound engineering and conservation practices as may be justified by the circumstances and evidence submitted.

165:10-13-6. Load oil

Load oil used in well completions which is not produced from the same lease or spacing unit shall not be charged against the well, lease, or unit. The well shall be allowed to produce such load oil in addition to the current monthly allowable. Operators claiming credit for load oil for allowable purposes may file Oklahoma Tax Commission Form 317 not more than 6 months after treating the well.

[**SOURCE:** Amended in Rule Making 980000033, eff 7-1-99]

165:10-13-7. Production from different pools

(a) In the event there are two or more common sources of supply produced through a well or wells on the same lease or drilling and spacing unit and which are not commingled under 165:10-3-39, the production from each common source of supply shall be separately produced, measured, and/or accounted for to the Commission.

(b) If one or more of the zones produced are classified as oil for allowable purposes, the operator of the well shall submit to the Conservation Division a multi-zone report on Form 1011 showing the production from each oil-bearing common source of supply on or before the last day of the succeeding proration period.

165:10-13-8. Transfer of allowables

Subject to the procedural requirement of 165:5-7-12, the Commission may issue an order transferring, after proper adjustment, all or part of an allowable from a well with a high gas-oil ratio or high water-oil ratio to a well having a lower gas-oil ratio or water-oil ratio, if:

(1) The wells produce from the same common source of supply.

(2) The wells are located on the same lease or in the same drilling and spacing unit.

165:10-13-9. Allowable for increased density well

(a) **Allowable production.** Except as otherwise provided by rule or order of the Commission, the allowable production for permitted wells within a drilling and spacing unit producing from the same common source(s) of supply shall be determined as follows:

(1) Each individual well shall be classified for allowable purposes by gas-oil ratio under 165:10-13-2.

(2) Permitted wells of the same classification for allowable purposes shall share a single well allowable.

(3) Permitted wells of different classifications for allowable purposes shall receive allowables as provided by the order of the Commission authorizing the additional well(s).

(b) **Shared single allowable.** If two or more wells in a single drilling and spacing unit are classified as gas wells for allowable purposes, the shared single allowable for the unit shall be determined by the greater of:

(1) A minimum allowable; or

(2) A normal allowable based on the wellhead absolute open flow potential of the best well in the drilling and spacing unit producing from the same common source of supply.

(c) **Additional well.** If an additional well is not of the same classification as any prior permitted well, it shall receive an allowable as provided by the order permitting the well.

(d) **Effect of penalties.** If the allowable for a well in a drilling and spacing unit is subject to a percentage penalty or lid on production, the penalty or lid on production shall apply to the ratable share of production of the shared single allowable for the penalized well as opposed to the entire shared single allowable for the unit.

(1) The ratable share of production of the shared single allowable for an unallocated gas well is that volume of gas which bears the same ratio to the shared single allowable as the wellhead absolute open flow potential for the well bears to the sum of the wellhead absolute open flow potentials for all wells in the drilling and spacing unit of the same classification for allowable purposes.
(2) The ratable share of production of the shared single allowable for a special allocated gas well is that volume of gas which bears the same ratio to the shared single allowable as the unpenalized monthly allowable the well would receive if it were the only well in the unit bears to the sum of such allowables for all the wells in the drilling and spacing unit of the same classification for allowable purposes.
(3) No special allocated well shall receive an allowable less than the defined minimum unit allowable divided by the number of wells in the drilling and spacing unit of the same classification for allowable purposes.
(4) The ratable share of production of the shared single allowable for an oil well is that volume of oil which bears the same ratio to the shared single allowable as the potential for the well bears to the sum of the potentials for all wells in the drilling and spacing unit of the same classification for allowable purposes. If the oil well was assigned a separate allowable under (c) of this Section, the penalty shall apply to the allowable assigned to the well.
(5) The portion of the shared single allowable representing the reduction in the allowable for the penalized well is not allocable to other wells in the drilling and spacing unit.

(e) **Which operator shall file required tests.** If the operators of the wells in a drilling and spacing unit cannot agree as to which operator shall file the required tests and production reports for the unit or as to what proportion of a shared single allowable shall be attributable to each well of the same classification for allowable purposes, the Commission may, after application, notice, and hearing, issue an order determining which operator shall file the tests and reports or what the proportional share of the shared single allowable is attributable to each well or the maximum rate of allowable production for each well.

(f) **Wellhead absolute open flow potential.** For the purpose of this Section, the wellhead absolute open flow potential for a test exempt gas well shall be presumed to equal:
(1) The average daily production for the previous calendar year (or that portion of the previous calendar year if the first sales date was after January 1 of that year), or the minimum allowable that would otherwise be assigned to an unallocated gas well under applicable rules of the Commission as if such well were the only well in the unit, whichever is less, for an unallocated well; or
(2) The product of two multiplied by the monthly allowable for the well under 165:10-17-9 for a special allocated well.

(g) **Testing or reporting requirements.** This Section shall not exempt any well from any testing or reporting requirement imposed by rule or order of the Commission.

[**SOURCE:** Amended at 9 Ok Reg 2337, eff 6-25-92; Amended in Rule Making 980000033, eff 7-1-99]

165:10-13-10. Applications for reinstatement of cancelled underage for oil wells and for unallocated gas wells

(a) **Oil well.**
(1) With respect to an oil well, all underage for the proration period in excess of 15 percent of the allowable shall be automatically cancelled at the end of the proration period, except underage accrued under (4) of this subsection because of the failure to split a tank.
(2) A producer may apply to reinstate cancelled underage if the well is capable of producing in excess of its allowable. The procedure for applying for reinstatement of cancelled underage is described in (c) of this Section.

(3) Except in situations where the operator has failed to comply with applicable well testing and reporting requirements of the Commission, failure or refusal of the purchaser to take the allowable shall be grounds for reinstatement of any underage accumulated because of such failure or refusal. Underage of this nature may be accumulated until balanced by future runs.
(4) The operator shall not be required to sell less than a full stock tank of oil by the end of the proration period to avoid cancellation of underage. Instead, such underage may be accrued until the operator accumulates and sells a volume of oil from the tank amounting to a full tank, and the sale of oil representing such underage shall not be considered as overage.

(b) **Unallocated gas well.**
(1) With respect to any unallocated gas well, of the total underage for the well or unit existing at the end of the proration period, 75% shall be automatically cancelled and 25% shall be automatically carried forward to the next prorationing period.
(2) Said underage carried forward to the next balancing period must be utilized in said balancing period, with that amount of underage carried forward but not used, to be cancelled at the end of the prorationing period.

(c) **Procedure for reinstatement of cancelled underage.**
(1) The operator of an oil well may apply for reinstatement of cancelled underage by application for administrative approval on Form 1010 within 90 days after cancellation of the underage.
(2) If the Conservation Division declines to approve the Form 1010 application, the applicant shall be notified in writing that application, notice, and hearing under 165:5-7-1 are necessary to obtain reinstatement of cancelled underage.

[**SOURCE:** Amended in Rule Making 980000033, eff 7-1-99]

SUBCHAPTER 15. OIL WELL PRODUCTION AND ALLOWABLES

Section

[BLANK PAGE]

165:10-15-1. Classification of oil pools and projects

(a) **Types of oil pools.** Each producing oil pool shall be classified by the Commission into one of the following categories:

(1) Discovery oil pool (165:10-15-5).
(2) Allocated oil pool (165:10-15-9).
(3) Unallocated oil pool (165:10-15-12).
(4) Enhanced oil recovery project (165:10-15-14).
(5) Excessive water exempt oil project (165:10-15-16).
(6) Reservoir dewatering oil spacing unit (165:10-15-18).

(b) **Treatment of an oil well located in a gas pool.** An oil well located in a gas pool shall be treated as an unallocated oil well, unless the oil well is subject to one of the following:

(1) Pool rules controlled by volumetric withdrawal.
(2) Discovery oil pool rules.
(3) Allocated oil pool rules.
(4) Some other order of the Commission.

(c) **Discovery oil pools.**

(1) A new oil pool which has complied with the provision of 165:10-15-5 may be granted discovery allowable production rates, administratively, subject to either:
(A) Spacing requirements.
(B) Order of the Commission.

(2) Each permitted discovery oil well shall be subject to discovery oil pool rules until either:
(A) Expiration of the discovery allowable period.
(B) Reclassification of the well or pool.

(d) **Allocated oil pool.**

(1) The Commission shall classify an oil pool as an allocated oil pool when:
(A) At any market demand hearing the total production from an oil pool or from any well within the pool needs to be regulated; or
(B) For good cause shown, upon application, notice, and hearing.

(2) A gas well located in an allocated oil pool that is reclassified as an oil well for allowable purposes shall be subject to allocated oil pool rules.

(3) Each allocated oil well shall be subject to the allocated oil pool rules until the Commission reclassifies the well or pool.

(e) **Unallocated oil pools.**

(1) Classification of unallocated oil pool:
(A) Any pool or area which does not require specific regulation and control by the Commission to restrict production to the market demand, aid in the prevention of waste, assure the maximum ultimate recovery of oil and gas from the pool, or protect correlative rights shall be classified as an unallocated pool.
(B) The Commission shall determine which discovery and allocated pools will be placed in the unallocated classification at each market demand hearing.

(2) Each unallocated oil well shall be subject to unallocated oil pool rules until the Commission reclassifies the well or pool.

(f) **Enhanced oil recovery projects.**

(1) **Authorized pressure maintenance.** The Commission may, upon application, notice, and hearing, authorize the pressure maintenance of a pool or the production of oil by the injection of fluid, fluids, gas, gases, or other material into a common source of supply or a portion thereof, whether unitized or not, where substantial quantities of additional oil may be recovered which could not be recovered under ordinary primary depletion methods. When so authorized, the project will be classified as an Enhanced Oil Recovery Project with one of the following classifications:
(A) Pressure Maintenance Project
(B) Gas Repressuring Project
(C) Waterflood Project
(D) Other Enhanced Recovery Projects

(2) **Status of a gas well reclassified as an oil well.** If a well classified as a gas well in an enhanced oil recovery project is reclassified as an oil

well for allowable purposes, the well shall be subject to the appropriate enhanced oil recovery project rules.

(3) **Termination of enhanced oil recovery status.** Each enhanced oil recovery well shall be subject to enhanced oil recovery project rules until one of the following occurs:

(A) Termination of the enhanced oil recovery project.

(B) The well is reclassified as a gas well for allowable purposes.

(C) The Commission issues an order reclassifying the well or project.

(D) The well is abandoned.

(g) **Excessive water exempt oil projects.**

(1) **Oil production rates.** The Director of Conservation may administratively authorize the production of oil at rates greater than the normal allowable provided the water-oil ratio of the well and/or pool is greater than or equal to 3:1. All applications shall comply with 165:5-7-12.

(2) **Status of a gas well reclassified as an oil well.** If a well classified as a gas well in an excessive water exempt oil project is reclassified as an oil well for allowable purposes, the well shall be subject to excessive water exempt oil project rules.

(3) **Termination of excessive water exempt status.** Each excessive water exempt well shall be subject to excessive water exempt oil project rules until at least one of the following occurs:

(A) The water-oil ratio declines below 3:1.

(B) Termination of the excessive water exempt oil project.

(C) The well is reclassified as a gas well.

(D) The Commission issues an order reclassifying the well or project.

(h) **Allowable for reservoir dewatering oil spacing unit.**

(1) **Oil production rates.** To set an allowable for a well in a reservoir dewatering oil spacing unit, the operator shall refer to Appendix J and submit the appropriate forms and/or application as provided in OAC 165:10-15-18.

(2) **Reclassification of oil well as gas well.** If a well in a reservoir dewatering oil spacing unit is later subject to reclassification as a gas well for allowable purposes, such reclassification will be determined according to general classification procedures based on the its gas/oil ratio pursuant to OAC 165:10-1-6(d) and (e) and 165:10-13-2. If the subject well is designated an excessive water exempt oil project pursuant to OAC 165:10-15-1(g) and 165:10-15-16, reclassification shall be determined by OAC 165:10-15-1(g)(2). If the subject well is assigned an allowable based upon its most efficient rate pursuant to OAC 165:10-13-5, such allowable shall remain in effect under the order establishing the production rate, so that the well will not be reclassified, until its status is modified or terminated by the terms of the instant or a subsequent Commission order.

(3) **Termination of reservoir dewatering oil spacing unit allowable.** The oil allowable assigned a reservoir dewatering oil spacing unit shall remain in effect until one of the following occurs:

(A) The subject well is reclassified as a gas well pursuant to OAC 165:10-1-6 and 165:10-13-2.

(B) The subject well's status as an excessive water exempt oil project is terminated pursuant to OAC 165:10-15-1(g)(3).

(C) The subject well's status under a most efficient rate order is modified or terminated by the terms of the instant or a subsequent Commission order.

[**SOURCE:** Amended in Rule Making 200100009, eff 7-1-02]

165:10-15-2. Overage adjustments for oil wells

No well, lease, unit, or project shall be overproduced in excess of 15 percent of the allowable for the proration period. All overage accrued at the end of the proration period shall be deducted from the allowable for the second succeeding proration period.

165:10-15-3. Effect of percentage penalty on oil wells

If a percentage penalty has been assigned to an oil well, the penalty shall, depending on the status of the well, be subtracted from:

(1) **Discovery status.** The applicable allowable from the Discovery Allowable Table (Appendix B to this Chapter) or the capacity of the well to produce as reported on Form 1029A or the annual Form 1008A, whichever is less.

(2) **If allocated or unallocated per-well status.** The applicable allowable from the Allocated Well Allowable Table (Appendix A to this Chapter) multiplied by the current market demand factor or the capacity of the well to produce as reported on the initial Form 1029A or the annual Form 1008A, whichever is less.

(3) **If unallocated per-lease status.** The shallowest ten acre or less allowable from the Allocated Well Allowable Table (Appendix A to this Chapter) multiplied by the current market demand factor for the penalized well only. The penalty shall be subtracted from the lease allowable.

165:10-15-4. Discovery oil pools [RESERVED]

165:10-15-5. Discovery oil allowables

(a) **Number of barrels of oil per day and duration of the discovery allowable period.** The maximum number of barrels of oil per day and the duration of the discovery allowable period shall be determined from the Discovery Allowable Table (Appendix B to this Chapter) or the Allocated Well Allowable (Appendix A to this Chapter), whichever is greater, provided that the well is in compliance with the other provisions of this Section and other rules pertaining to allowables. If the well is not capable of producing at the discovery rate without causing preventable waste, the temporary discovery allowable shall be the capacity of the well to produce as reported on Form 1029A or the annual Form 1008A, unless otherwise limited by the Commission.

(b) **Effective date of discovery allowable.**

(1) The discovery allowable period for the pool shall begin with the date of first completion of the discovery well of the pool and extend as provided in the Discovery Well Allowable Table (Appendix B to this Chapter).

(2) The discovery allowable period for each well in the pool shall run from the date specified under 165:10-15-7 for each well to the date of termination of the pool, if granted administratively.

(3) If application, notice, and hearing are required, the effective date of the discovery allowable period shall be specified by an order of the Commission, provided that such date shall not precede the date of filing of the application. The date of expiration of the discovery allowable shall still be determined as set forth in (1) of this subsection.

(c) **Gross allowable production.** The gross allowable production for any proration period from a well in a discovery pool may, at the option of the operator, be produced at any time during the proration period; however, in no event shall the production exceed the maximum efficient rate of flow.

165:10-15-6. Production tests and reports for discovery oil pools

(a) **Initial test requirements.** The operator of each well in each discovery pool shall perform an initial potential test and furnish the Conservation Division the results of such test on Form 1029A not later than 30 days after completion of each well. Each individual well shall be tested for not less than six hours and not more than 24 hours with the production calculated and reported at a daily rate (24 hours).

(b) **Witnessing of tests.**

(1) With respect to initial test, the operator shall give twenty-four (24) hour notice of the opportunity to witness said test to the Conservation

Division and the offset operator(s) producing from the same pool, but no waiver or signature of Conservation Division personnel is required on Form 1029A.
(2) Any operator in the pool may witness any official test for any well in the pool. However, any person other than a Commission employee witnesses a test at their sole risk and expense.

[**SOURCE:** Amended at 9 Ok Reg 2337, eff 6-25-92; Amended in Rule Making 980000033, eff 7-1-99]

165:10-15-7. Procedure for obtaining discovery allowable
(a) Any operator desiring a discovery allowable shall file Form 1028 with the material and information specified below:
(1) A resistivity and a porosity type wireline survey of the well in question, if run.
(2) A Completion Report (Form 1002A) and Cementing Report (Form 1002C), completed in detail.
(3) A Potential Test (Form 1029A), completed in detail.
(4) A plat of the area showing all of the following information for each well within one and one-half (1 1/2) miles of the subject well:
(A) Operator.
(B) Well name and number.
(C) Total depth.
(D) Current status of the well (dry, oil, gas, injection, disposal, temporarily abandoned).
(E) Name of interval open, if any.
(F) Perforations, top and bottom, if any.
(G) Average daily production.
(5) An isopach contour map of the productive interval and/or a structural contour map of a nearby marker bed or formation, not separated from the producing interval by an unconformity, which is commonly used in the area. The Conservation Division may require either or both types of maps to determine the discovery status. The Commission may also require additional geological and/or engineering data, such as: stratigraphic cross-sections, structural cross-sections, production, and pressure information.
(b) The Conservation Division may administratively designate a discovery allowable for a well when the operator furnishes the Technical Department with the information specified in (a) of this Section. If the information is provided within 30 days of the date of first production and the application is approved, the effective date of the discovery allowable shall be the date of first production. If the information is provided more than 30 days after the date of first production and the application is approved, the discovery allowable shall be effective the date of filing.
(c) If a gas well in a discovery oil pool is reclassified as an oil well for allowable purposes, the operator must file the appropriate form, information and material specified in (a) of this Section within 30 days of reclassifying the well to obtain a discovery allowable. The allowable shall be effective the date the well was reclassified as an oil well as indicated on Form 1002A. If the application is not received within the specified time period, the application will be processed in accordance with (b) of this Section.

165:10-15-8. Allocated oil pools [RESERVED]

165:10-15-9. Allocated oil allowables
(a) **Effective date of allowables.** The allowable for an allocated well completed or recompleted on or after the first day of the proration period shall become effective the date of completion of the well, provided the operator has complied with the provisions of this Section and other rules governing

allowables. In situations where the operator fails to comply, the allowable shall become effective the date the operator complies with this Section and other rules governing allowables.
(b) **Allowables in allocated pools.** Allowables in allocated pools shall be granted on an individual well basis, subject to appropriate spacing requirements, unless otherwise specified by order of the Commission. The allowable for each allocated well shall be determined as if the well was an unallocated well operating under 165:10-15-12(b) or 165:10-15-12(c)(1), whichever is appropriate, unless adjusted by order of the Commission. The operator shall produce the allowable on each well from that well and no part thereof from any other well.
(c) **Application.** Upon application by the Director of Conservation or any interested party, and after notice and hearing, the Commission may order the wells in a common source of supply to be produced under allowables established by special pool rules in lieu of the provisions of this Section. All requirements as to production tests and allowables shall be set forth by the order of the Commission establishing such special pool rules.

165:10-15-10. Production tests and reports for allocated oil wells

All production tests and reports shall be filed as if the allocated well were an unallocated well operating on a per-well basis allowable under 165:10-15-13(a).

165:10-15-11. Unallocated oil pools [RESERVED]

165:10-15-12. Unallocated oil allowables

(a) **Effective date of allowable.** The allowable for a well completed or recompleted on or after the first day of a proration period shall become effective the date of completion of the well, provided the operator has complied with the provisions of this Section and other rules governing allowables. In situations where the operator fails to comply, the allowable shall become effective the date the operator complies with this Section and other rules governing allowables.
(b) **Well in an unallocated pool.** Each well in an unallocated pool in which drilling and spacing units have been established shall be assigned the applicable allowable on a per-well basis from the Allocated Well Allowable Table (Appendix A to this Chapter) multiplied by the current market demand factor unless adjusted by order of the Commission. The production from each well shall be separately accounted for to the Commission.
(c) **Lease in an unallocated pool.** Each individual lease in an unallocated pool in which drilling and spacing units have not been established shall be assigned allowables, at the option of the operator, on either of the following basis:

(1) **A per-well basis.** If the operator elects to accept the per-well basis allowable, each well on the lease shall be assigned an allowable applicable to a ten-acre or less allowable at the appropriate depth from the Allocated Well Allowable Table (Appendix A to this Chapter) multiplied by the current market demand factor unless adjusted by order of the Commission. The production from each well shall be separately accounted for to the Commission.

(2) **A per-lease basis.** If the operator elects to accept the per-lease basis allowable, the allowable for the lease shall be the shallowest ten-acre or less allowable from the Allocated Well Allowable Table (Appendix A to this Chapter) multiplied by the current market demand factor multiplied by the number of wells on the lease unless adjusted by order of the Commission. The production from each lease shall be separately measured and accounted for to the Commission.

165:10-15-13. Production tests and reports for unallocated oil wells

(a) **Per-well basis allowable.**

(1) If the well is an allocated well, or an unallocated well located on lands in which drilling and spacing units have not been established and the operator elected to accept allowables on a per-well basis, or an unallocated well located on lands in which drilling and spacing units have been established, the operator shall file a production test on Form 1029A no later than 30 days after the earlier of:

(A) Making the election,

(B) Completion of the well, or

(C) Recompletion of the well.

Each individual well shall be tested for not less than six hours and not more than 24 hours with the production calculated and reported at a daily rate (24 hours).

(2) Each new well shall be given an allowable equal to the allowable for an unallocated per-well basis well until the production test has been performed with the results reported to the Conservation Division on Form 1029A. The allowable shall be effective for a period not longer than 30 days from completion of the well. No further allowable shall be assigned to the well until compliance with this subsection.

(3) Until an operator submits the required test results for any well, as provided in subsection (a)(1), no allowable shall be assigned to the well. If said test results are filed late, then the allowable shall be effective the first day of the following month after the Conservation Division accepts the test.

(4) All initial tests shall be conducted in the manner set forth in (1) of this subsection.

(5) Annual testing shall not be required.

(b) **Per-lease basis allowables.**

(1) If the well is an unallocated well located on lands in which drilling and spacing units have not been established and the operator elects to accept allowables on a per-lease basis, the operator shall file a production test on Form 1029A with the Conservation Division not later than 30 days after:

(A) Making the election,

(B) Completion of the initial well on the lease,

(C) Completion of a subsequent well on the lease,

(D) Recompletion of any well on the lease, or

(E) Retesting of any well on the lease.

Each well on the lease shall be tested for not less than six hours and not more than 24 hours with the production calculated and reported at a daily rate (24 hours).

(2) Each lease shall be given an additional allowable equivalent to the shallowest ten-acre or less allowable from the Allocated Well Allowable Table (Appendix A to this Chapter) multiplied by the current market demand factor for each new producing well added to the lease until the production test has been performed with the results reported to the Conservation Division on Form 1029A. The additional allowable shall be effective for a period not longer than 30 days from completion of the well. No further additional allowable shall be assigned to the lease until compliance with this subsection.

(3) If an operator fails to submit the required test results for any lease with allowables calculated on a per-lease basis, no allowable shall be assigned to the lease. The operator may submit the results of the test to the Conservation Division on Form 1029A to reinstate the allowable. The allowable shall be effective the first day of the following month after the Conservation Division accepts the test.

(4) No lease shall be granted underage resulting from failure to perform a required test in compliance with this Section.

(5) All initial tests, annual tests and retests shall be conducted in the manner set forth in (1) of this subsection.

[**SOURCE:** Amended at 9 Ok Reg 2337, eff 6-25-92; Amended in Rule Making 980000033, eff 7-1-99]

165:10-15-14. Enhanced oil recovery project allowables

(a) **Effective date of allowable.** The allowable for an enhanced oil recovery project shall be effective on the date operations commenced or the date specified by order of the Commission authorizing the project, whichever is later, provided the operator has complied with the provisions of this Section and other rules governing allowables. In situations where the operator fails to comply, the allowable shall become effective the date the operator complies with this Section and other rules governing allowables.

(b) **Qualification for enhanced oil recovery allowable.** For any project to qualify for an enhanced oil recovery allowable, an order of the Commission authorizing the project must be obtained.

(c) **Allowable for enhanced oil recovery project.** The allowable for an enhanced oil recovery project shall be on a project basis and shall be the capacity of the project to produce.

(d) **Wells on a project producing from another reservoir.** Oil wells within the boundaries of a project which do not produce from the project shall not be permitted to produce any portion of the allowable of such enhanced oil recovery project. The oil produced by non-project wells shall be separately produced, measured, and reported.

165:10-15-15. Production tests and reports for enhanced oil recovery projects

(a) Within 30 days of commencement of any enhanced oil recovery project, the operator shall file with the Conservation Division an inventory of all the wells located within the boundaries of the project completed in the approved common source of supply showing the name of the project and the new OTC Production Unit Number (including merge number) and the following for each well:

(1) Previous OTC Production Unit Number.
(2) API Number.
(3) Well Name and Number.
(4) Legal location, including quarter quarter quarter quarter section.
(5) Current status (producer, injector, observation, or temporarily abandoned).

The inventory shall also include the current daily (24 hour) production and injection rates for the project.

(b) The operator shall notify the Conservation Division in writing within 30 days of the completion of any new well or the change in status of any existing well in the project.

(c) Until the operator submits the required test results for any enhanced oil recovery project as provided in subsection (a), no allowable shall be assigned to the project. If said test results are filed late, then the allowable shall be effective the first day of the following month after the Conservation Division accepts the tests.

(d) All initial tests shall be conducted as set forth in subsection (a).

(e) Annual testing shall not be required except as provided in OAC 165:10-1-6.

[**SOURCE:** Amended in Rule Making 980000033, eff 7-1-99]

165:10-15-16. Excessive water exempt oil project allowables

(a) **Effective date of allowables.** The allowable for an excessive water exempt oil project shall be on a well or a project basis and shall be effective when the Conservation Division receives and accepts the production test of, Form 1013, unless otherwise specified by order of the Commission.

(b) **Qualification for excessive water exempt oil project.** For any project or well to qualify for excessive water exempt allowable, an order of the Commission authorizing the well or project must be obtained.

(c) **Allowable for excessive water exempt oil project.** The allowable for a well or project which has received a special excessive water exempt allowable shall be the capacity of the well or project to produce without causing preventable waste unless otherwise adjusted by the Director of Conservation. The production from a well which has received a special excessive water exempt allowable under this Section shall be separately produced, measured, and accounted for to the Commission from the oil produced from the remainder of the lease.

165:10-15-17. Production tests and reports for excessive water exempt oil projects

(a) The operator of each individual well with an excessive water exempt allowable shall file an initial production test, in duplicate, on Form 1013 with the Conservation Division. Each individual well shall be tested for seven consecutive days, and the amount of oil and the amount of water produced each day shall be reported on Form 1013. With respect to the initial test, the operator shall give twenty-four (24) hour notice of the opportunity to witness said test to the Conservation Division and the offset operator(s) producing from the same formation, but no waiver or signature of Conservation Division personnel is required on Form 1013.
(b) Each individual well shall be given an initial allowable equal to the unallocated per-well basis allowable until the production test has been performed with the results reported to the Conservation Division on Form 1013. The allowable shall be effective for a period not longer than 30 days from completion of the well. No further allowable shall be assigned to the well until compliance with this subsection.
(c) Until the operator submits the required test results for any excessive water exempt well or project, as provided in subsection (a), no allowable shall be assigned to the well or project. If said test results are filed late, the allowable shall be effective the first day of the following month after the Conservation Division accepts the test.
(d) All initial tests shall be conducted as set forth in (a) of this Subsection.
(e) Annual testing shall not be required except as provided in OAC 165:10-1-6.

[**SOURCE:** Amended in Rule Making 980000033, eff 7-1-99]

165:10-15-18. Production tests and reports for reservoir dewatering oil spacing units

(a) **Effective date for oil allowable.** To establish the commencement date of an allowable for an oil well in a reservoir dewatering oil spacing unit, the operator shall file Forms 1002A and 1013, in lieu of the Form 1029A, with the Commission according to OAC 165:10-13-3 within thirty (30) days after the completion date of the well. The allowable will commence on the date of first production.
(b) **Qualification for reservoir dewatering unit.** Proof of fifty percent (50%) water saturation presented at the time of a hearing to establish dewatering oil spacing may entail calculations from logs or core data from wells within the common source of supply covered by the application or an analogous common source of supply, or an actual production test from a well in the common source of supply covered by the application. To qualify for the reservoir dewatering spacing unit allowable provided on Appendix J, the Form 1013 must provide data that verifies that the water-oil ratio is greater than 1:1. If the water-oil ratio is less than 1:1, then the oil allowable shall be the appropriate allowable for the depth of the top of the formation and the maximum acreage provided in Appendix A.
(c) **Allowable rate not provided for in Appendix J.** To establish an allowable other than that specified in Appendix J, the operator shall file a Form 1030 with the Commission to adjust the allowable.
(d) **Record of annual production rates.** The operator shall maintain production records on an annual basis. Operators shall make these records available to the Conservation Division staff upon the request of the Manager of the Technical Department. Annual testing shall not be required except as provided in OAC 165:10-1-6.

[**SOURCE:** Amended in Rule Making 200100009, eff 7-1-02]

[BLANK PAGE]

SUBCHAPTER 17. GAS WELL OPERATIONS AND PERMITTED PRODUCTION

Section

[BLANK PAGE]

165:10-17-1. Gas production from gas pools [RESERVED]

165:10-17-2. Classification of gas pools

(a) **Types of gas pools.** Each gas pool shall be classified by the Commission into one of the following categories:
(1) Allocated Gas Pool.
(2) Special Allocated Gas Pool.
(3) Unallocated Gas Pool.

(b) **Treatment of gas well in an oil pool.** If a well in an oil pool is classified as a gas well for allowable purposes, the well shall be treated as if it were in an unallocated gas pool, unless the well is subject to pool rules which establish allowables by volumetric withdrawal.

(c) **Allocated gas wells.**
(1) **Classification of pool by order.** Upon application, notice, and hearing, the Commission may issue an order establishing allowables for gas wells in a pool by the allocated gas pool rules in 165:10-17-8.
(2) **Status of an oil well reclassified as a gas well.** If a well classified as an oil well in an allocated gas pool is reclassified as a gas well for allowable purposes, the well shall be subject to allocated gas pool rules.
(3) **Termination of allocated status.** Each allocated gas well shall be subject to allocated gas pool rules until:
(A) The Commission establishes special allocated gas pool rules for the common source of supply.
(B) The well is reclassified as an oil well for allowable purposes.
(C) The Commission issues an order reclassifying the well as an unallocated gas well.
(D) The well becomes the only gas well in the pool.
(E) The well is abandoned.

(d) **Special allocated gas pools.** Each gas pool for which special pool allocation rules (field rules) are or have been established by the Commission shall be classified as a special allocated gas pool. Each gas well in a special allocated gas pool shall be referred to as a special allocated gas well for allowable purposes.

(e) **Unallocated gas pools.** Each gas pool not classified as an allocated gas pool or as a special allocated gas pool shall be classified as an unallocated gas pool. Each gas well in an unallocated gas pool shall be referred to as an unallocated gas well for allowable purposes.

165:10-17-3. Effective date of allowables

A gas well shall be assigned an allowable as of the date it is connected into a pipeline and the first delivery is made if the Notice of Intention to Drill (Form 1000) is valid, the Completion Report (Form 1002A) is filed with attachments, if required, and all required tests are run within 30 days from the date of first sales and are filed within 45 days of the date of first sales, and special reports have been filed with the Conservation Division.

[**SOURCE:** Amended in Rule Making 980000033, eff 7-1-99]

165:10-17-4. Standard gas measurement law

Sections 471 through 477, inclusive, of Title 52, Oklahoma Statutes Annotated, cited as the "Standard Gas Measurement Law", are hereby adopted as rules of the Commission as fully as if set out verbatim herein.

165:10-17-5. Meters and recorders
(a) **Requirement of a gas meter and recorder.**
(1) For allowable, allocation or custody transfer purposes, each well producing natural gas other than a shut-in gas well shall have a gas meter and recorder for the gathering line; provided, if two or more wells share a single allowable, a single meter and recorder may be used to measure gas production, unless a special order of the Commission or either 165:10-13-9 or 165:10-3-39 require allocation of gas production on a per well basis.
(2) For purposes of (1) of this subsection, the term "recorder" refers to a circular gas chart recorder or other type of recording device which has been mutually agreed upon by the gas seller and the gas purchaser.
(3) For purposes of (1) of this subsection, an offsite recorder shall be permitted provided:
(A) There is compliance with the requirements of (2) of this subsection.
(B) The recording device is made available for inspection by the Conservation Division to determine that the recorder is functioning properly.
(4) Offsite recordation under (1) and (3) of this subsection shall be treated as wellsite metering for purposes of the reporting requirements of 165:10-1-47.
(5) Use of electronic gas measurement and recording devices that meet industry standards of (b)(2) of this Section are permitted for allowable, allocation, custody transfer, and well testing.
(b) **Standards for meters and recorders.**
(1) Each meter and recorder shall be properly constructed, maintained, repaired, and operated to continually and accurately register the quantity of gas produced from the well into a gathering line.
(2) The meter and recorder shall be installed, used, and operated according to the natural gas industry standards and guidelines promulgated by the American Gas Association, the American Petroleum Institute, and the Gas Processors Association, in effect at the time of installation of the meter and recorder. If there are conflicting standards, then the most current American Petroleum Institute standard shall apply.
(c) **Prohibited meter bypasses.** For each meter measuring production at the wellsite, use of piping to bypass the meter is prohibited. Gas meters with internal bypasses are permitted.
(d) **Reporting of estimated volume if the meter or recorder fails.**
(1) **Seventy-two hours to repair equipment.** If a meter or recorder at the wellsite malfunctions, then the malfunctioning equipment shall be repaired within 72 hours after discovery of the malfunction.
(2) **Reporting of estimated volumes while the meter or recorder is down.** If the well continues to produce gas while the meter or recorder is malfunctioning or being repaired, estimated gas volumes shall be reported to the Conservation Division for purposes of 165:10-1-47.

[**Source:** Amended at 12 Ok Reg 2017, 7-1-95]

165:10-17-6. General well testing requirements
(a) All single-point and multi-point potential tests shall be calculated for all gas wells in a uniform manner with respect to the following:
(1) The potential shall be the calculated wellhead absolute open flow potential of the well determined by obtaining a static column wellhead flowing pressure and shall indicate the capacity of the well to produce against zero psia at the wellhead.
(2) All pressures used in test calculations shall be corrected to pounds per square inch absolute, using 14.4 psia as the average barometric pressure.
(3) The static column wellhead pressure, either measured or calculated as reported in the potential test, shall be no more than 90 percent of the wellhead shut-in pressure. If data cannot be obtained in accordance with the foregoing provisions, an assumed static column wellhead pressure of 90

percent of the wellhead shut-in pressure shall be used to calculate the results of the test. This paragraph supersedes any contrary provision in special pool rules.

(b) The operator of a well shall be responsible for testing the well and submitting the test results to the Conservation Division. The results of a potential test shall be filed with the Conservation Division on Form 1016. If the operator wishes to obtain a copy of the approved Form 1016, he shall enclose with the original form a self-addressed stamped envelope and one additional copy of the test and/or form. The Conservation Division shall acknowledge such requests within 15 days, stating either the date of acceptance of the test results or rerunning the original test if it has been rejected. If any order or rule of the Conservation Division requires witnessing of a test, the operator of the well shall be responsible for securing the presence of an authorized Conservation Division representative to witness the test and sign the Form 1016 for the test.

(c) Unless otherwise prescribed by special pool rules, field testing procedure shall be performed in accordance with the procedures set out in Oklahoma Corporation Commission Manual of Back-Pressure Testing of Gas Wells, Parts I and II, utilizing the specified tables in the Interstate Oil and Gas Compact Commission Manual of Back-Pressure Testing. A gas turbine meter may be used in lieu of an orifice meter for flow measurements in gas well testing.

(d) The initial test for all gas wells shall be run into the pipeline within 30 days and test results filed within 45 days after the date of first sales of gas. Any test filed after the 45 day limit will not be made effective until the first of the month following the date of acceptance of the test. With regard to initial tests for special allocated gas wells, the operator of the well shall provide twenty-four (24) hours notice to the Conservation Division of its intent to run an initial test in order to give the Conservation Division the opportunity to witness said test, but in no case shall the operator be precluded from performing said test and filing the results as provided for in subsection (b). Initial tests for special allocated gas wells need not be witnessed, nor signatures obtained, if witnessed, in order for the Conservation Division to assign an allowable to said well. Initial tests for unallocated gas wells with calculated open flow of less than two million cubic feet per day are exempt from witnessing by Conservation Division personnel under 165:10-17-7(b)(1).

(e) The annual test for all gas wells shall be run into a pipeline in accordance with this Section or applicable pool rules. Any annual test for a well in a special allocated pool, filed late shall not be made effective until the first of the month following the date of acceptance of the test.

(f) Wells in allocated pools shall be tested in accordance with the requirements for wells in unallocated pools, unless superseded by specific field rules. Form 1016 shall be used to report shut-in pressure tests on wells in allocated and special allocated pools, except for the Guymon-Hugoton Pool #182 which shall use a form 1017 Deliverability Gas Test.

[**SOURCE:** Amended in Rule Making 980000033, eff 7-1-99]

165:10-17-7. Well tests

(a) **Wells in special allocated pools.**

(1) An initial test shall be filed for each newly completed gas well in each special allocated pool. The well shall be tested into a pipeline no later than 30 days after the date of the first sale of gas. Test procedures shall be those specified in the applicable pool rules subject to the uniform requirements of 165:10-17-6.

(2) An annual test shall be filed in accordance with the requirements of the applicable pool rules, subject to the following provisions specific to the Guymon-Hugoton special allocated pool.

(3) **Wells in the Guymon-Hugoton special allocated pool.**

(A) The Conservation Division staff will not be required to witness any well test on any well in the Guymon-Hugoton special allocated gas pool unless requested to do so by an offset operator. Operators have a right to witness any well test on any well offsetting said operator's well in the pool. Operators of offsetting wells will be given sufficient prior notice of testing to allow for a representative to be present to witness testing, and will be provided access to the designated witness throughout testing.

(B) Wells in the Guymon-Hugoton special allocated gas pool which are not capable of producing 450 Mcf/day will be exempt from biannual deliverability tests. Operators shall have the right to elect to receive the minimum allowable by deciding not to conduct well deliverability tests on any such wells in the pool. No well shall be exempt from the annual wellhead shut-in pressure test requirements. For the purpose of the annual wellhead shut-in pressure test, the shut-in pressure shall be measured after the well has been shut-in for approximately 48 hours. In no case shall the well have been shut-in for less than 44 hours at the time the shut-in pressure is taken.

(b) **Wells in unallocated pools.**

(1) **Testing of newly completed wells.**

(A) An initial test shall be submitted to the Conservation Division for each newly completed gas well in an unallocated gas pool under 165:10-17-2. The well shall be tested into a pipeline no later than 30 days after the date of first sale of gas into a pipeline. The flow period for the initial test shall be 24 hours. It shall not be necessary for the operator to submit the initial flow potential test for an unallocated well with a calculated open flow of less than 2,000,000 cubic feet per day, only the wellhead shut-in pressure taken for a minimum of 24 hours for the well is required, unless requested by the Commission. All tests and initial shut-in pressures shall be submitted to the Conservation Division on Form 1016 and, at the operator's discretion, in digital magnetic form in a format prescribed by the Commission. The form shall contain complete and accurate information.

(B) If said initial test is taken between the first day of January and the thirty-first day of July of the calendar year, the test shall be used for allowable purposes for the calendar year unless the operator later submits a retest which is accepted by the Conservation Division.

(C) The well shall also be tested during the annual test period between the first day of May and the thirty-first day of October, but no sooner than three months after the initial test. Said test shall be used for the annual test to determine permitted production for the following calendar year unless the well is later retested.

(D) If the test used for the following year cannot be submitted during the annual test period, the Conservation Division may grant administratively a written extension of time up to 30 days beyond the thirty-first day of October for running the test.

(2) **Annual test period for other wells.** An annual potential test shall be run on each gas well in each unallocated pool between May 1, and November 30, and must be accepted by the Commission no later than December 15, except for wells exempt under (4) of this subsection. The annual potential test shall be effective January 1 of the succeeding calendar year (annual accounting period) unless superseded by a later test. The Director of Conservation may require additional tests at any time. Retests become effective the first day of the month following acceptance of the test by the Conservation Division.

(3) **One-point tests.** The potential test required for each gas well in each unallocated pool shall use the one-point back pressure method and an assumed flow characteristic of 0.85 shall be used in establishing the wellhead absolute open flow. The test shall be governed by the requirements of OAC 165:10-17-6.

(4) **Minimum well exemption from annual tests.** Each gas well in each unallocated pool having a tested potential of 2,000,000 cubic feet of gas per day, or less, shall thereafter be exempt from the annual potential test, and the operator of the well shall report annually the results of an annual wellhead shut-in pressure test taken for a minimum of 24 hours on Machine Accounting Form 1007A and, at the operator's discretion, in digital magnetic form in a format prescribed by the Commission unless the Director of

Conservation waives in writing the pressure test requirement. Machine Accounting Form 1007A, when received by the operator, shall be used to report shut-in pressure tests and gas sales from the previous calendar year on wells in unallocated pools. Wellhead shut-in pressure just for minimum wells may be taken any time during the year, but must be taken at least six months after the test submitted for the prior year.

(5) **Retests.** Retests may be run at any time and shall become effective the first day of the month following acceptance of the test by the Conservation Division. Retests submitted during the unallocated gas well testing period of May 1, through October 31, will also be classified as annual-status tests to establish the allowable for the following year.

(6) **Minimum compliance.** Each operator shall be responsible for conducting and submitting the required potential tests on the applicable form and for the annual reporting of all required information on Machine Accounting Form 1007A and, at the operator's discretion, in digital magnetic form in a format prescribed by the Commission. All submitted tests and 1007A forms must contain complete and accurate information. Permitted production rates will be granted only to those wells which meet this requirement and all other rules or orders of the Commission.

[**SOURCE:** Amended in Rule Making 97000002, eff 7-1-97; Amended in Rule Making 97000011, eff 7-1-98; Amended in Rule Making 980000033, eff 7-1-99]

165:10-17-8. Allocated pools

(a) The current monthly allowable for each allocated pool shall be equal to the total production from the pool during the current month.

(b) The current allowable for each capable drilling and spacing unit within the pool shall be that proportion of the pool allowable that the acreage of the drilling and spacing unit bears to the total developed acreage in the pool, adjusted in accordance with any order of the Commission imposing an allowable adjustment. The current allowable for each limited drilling and spacing unit shall be equal to the current production from the unit. A unit shall be deemed limited when its underage is cancelled under this Section until it thereafter produces a current allowable for any one month.

(c) Accrued underage shall be carried forward as a cumulative credit by adding it to the unit's current allowable until the underage has been produced. If the unit's cumulative underage exceeds six times the allowable assigned to it for the preceding January, all of the underage will be cancelled, the unit shall be classified as "limited", and the unit shall not thereafter accumulate underage until such time as the unit produces a current allowable for any one month. All cancelled underage shall be distributed to the capable drilling and spacing units within the pool in the proportion that the acreage of each unit bears to the total capable acreage in the pool, adjusted in accordance with any order of the Commission imposing an allowable adjustment. A capable unit shall be any nonlimited unit. Cancelled underage may be reinstated administratively by the Director of Conservation to any capable unit in an overproduced status within six months after cancellation by application on Form 1010.

(d) Accrued overage shall be carried forward as a cumulative charge against the unit by subtracting it from the unit's current allowable until the overage has been made up. If the cumulative overage exceeds six times the current allowable assigned for the preceding January, the Director of Conservation shall notify the operator in writing, and the unit shall thereafter be permitted to produce not more than 25 percent of its current allowable until all of the overage in excess of six times the well's current allowable for the preceding January has been made up. In the event the operator fails to limit production as herein provided, the well shall be ordered shut-in by the Commission upon application of the Director of Conservation and after notice and hearing.

(e) If a unit did not have a current allowable assigned to it on a full month's basis for the preceding January, the first current allowable assigned to the unit on a full month's basis shall be used as reference for the purpose of limiting underage and overage.

165:10-17-9. Special allocated gas pools

(a) **Scope.** This Section applies to special allocated gas pools except any special allocated gas pool with allowables based upon volumetric withdrawals.

(b) **Minimum unit allowable of 150 mcf/d.** For all special allocated gas pools except the West Cheyenne Upper Morrow, Purvis Chert, Guymon-Hugoton, Custer City N. Hunton, Sharon W. Morrow, Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro, the minimum allowable for a drilling and spacing unit in the pool shall be 150 MCF/D regardless of the amount of any location exception penalty charged against a unit well. For purposes of this Section, the net minimum allowable shall be the gross minimum allowable adjusted for overage or underage according to this Section.

(c) **Minimum unit allowable of 450 mcf/d for the Guymon-Hugoton pool.**

(1) For the Guymon-Hugoton Special Allocated Gas Pool, minimum allowables shall be determined as follows: The minimum allowable shall be the lesser of 450 mcf/d or the drilling and spacing unit's capability. Capability shall be defined as the average of the highest three (3) of the last twelve (12) months of production. A drilling and spacing unit receiving a minimum allowable shall not accrue underage. The minimum allowables under this Section shall not affect the calculation of capable well allowables. The field monthly allowable shall be equal to total nominations and not adjusted for underage or overage.

(2) The deliverability standard pressure (DSP) to be used in the application of special allocated rules (field rules) shall be defined as 25 pounds less than the average shut-in wellhead pressure of the pool.

(3) The Corporation Commission shall calculate and publish reports of allowable and production quarterly.

(d) Minimum unit allowable of 2,000 mcf/d for the Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro Pools. For the Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro Pools (Pool Nos. 456, 457 and 458) located in Latimer and LeFlore Counties, Oklahoma, the minimum allowable for a drilling and spacing unit in each pool shall be 2,000 mcf/d. For purposes of this Section, the net minimum allowable shall be the gross minimum allowable adjusted for overage or underage according to this Section.

(e) **Double minimum allowable of 300 mcf/d.**

(1) **Compressor and application required.** For all special allocated gas pools except the West Cheyenne Upper Morrow, Purvis Chert, Guymon-Hugoton, Custer City N. Hunton, Sharon W. Morrow, Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro, if a drilling and spacing unit has a minimum allowable under (b) of this Section, the operator of a well in the drilling and spacing unit may obtain for the unit a double minimum allowable regardless of any location penalty against a well by installing a compressor on a unit well and applying for a double minimum allowable under (2) of this subsection.

(2) **Request for administrative approval.** To apply for a double minimum allowable, the operator shall submit to the Manager of Production Allowables for the Conservation Division a letter requesting a double minimum allowable and stating the factual basis for the request and the legal description of the well with the compressor.

(f) **Basic allowable.**

(1) **Use of basic allowable for determining overage and underage.** For purposes of determining the amount of overage or underage accrued by a well or drilling and spacing unit, the Conservation Division shall establish on a yearly basis a status factor known as the basic allowable.

(2) **Apportionment of basic allowable.**

(A) **Increased density unit without apportionment of the allowable.** If neither OAC 165:10-13-9 nor an order of the Commission require specific allocation of the unit allowable to each unit well, overage and underage shall be carried on a unit basis.

(B) **Increased density unit with ratable allowables.** If either OAC 165:10-13-9 or an order of the Commission require specific allocation of the unit allowable to each unit well, overage and underage shall be carried on a per well basis. For purposes of computing overage and underage, the basic allowable shall be apportioned to each unit well using the formula for determining each well's ratable allowables for the applicable month under (3) of this subsection. The term "ratable allowables" refers to a well's share of the unit allowable under the formula apportioning the allowable amongst the unit wells.

(3) **Computation of the basic allowable.** Except as provided in (C) of this paragraph for basic allowable changes, the basic allowable for the calendar year shall be computed as follows:

(A) **For all pools except the Red Oak Pools.** For all pools except the Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro, the basic allowable shall equal the drilling and spacing unit's January allowable for the calendar year.

(B) **For the Red Oak Pools.** For the Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro, the basic allowable shall equal the drilling and spacing unit's March allowable for the calendar year.

(C) **Changes in the basic allowable.**

(i) **Test exempt minimum allowable.** If a drilling and spacing unit receives test exempt minimum allowable status as provided in this Section, then the basic allowable shall be a minimum allowable.

(ii) **Test exempt double minimum allowable.** If a drilling and spacing unit receives a test exempt double minimum allowable as provided in this Section, then the basic allowable for the unit shall be a double minimum allowable.

(iii) **Retests.** If the well operator submits to the Conservation Division a retest which is approved by the Conservation Division, then the Conservation Division shall recompute the basic allowable using the retest. Retests are permitted at any time and become effective the first day of the month after acceptance by the Conservation Division.

(g) **Determination of overage and underage.**

(1) **Overage.**

(A) **Drilling and spacing unit without ratable allowables.** If no well in a drilling and spacing unit is subject to a ratable allowable, the current monthly allowable shall be compared with the second prior month's unit production. Production in excess of the current monthly allowable is overage. Aside from any adjustment to the pool allowable required by pool rules, overage shall not reduce any subsequent monthly allowable until accumulated overage exceeds the applicable overage limit under (h) of this Section.

(B) **Drilling and spacing unit subject to ratable allowables.** If any well in a drilling and spacing unit is subject to a ratable allowable, the current monthly ratable allowable for the well shall be compared with the second prior month's production from the well. Production in excess of the ratable allowable is overage. Aside from any adjustment to the pool allowable required by pool rules, the well's overage shall not reduce any subsequent monthly ratable allowable until accumulated overage exceeds the well's overage limit under (h) of this Section.

(2) **Underage.**

(A) **Drilling and spacing unit without ratable allowable.** If no well in a drilling and spacing unit is subject to a ratable allowable under OAC 165:10-13-9, the current monthly allowable for the unit shall be compared with the second prior month's unit production. If production is less than the allowable, the difference between the production and the unit allowable is underage. Aside from any adjustment to the pool allowable required by pool rules, only reinstated cancelled underage under (k) of this Section shall increase any subsequent monthly allowable.

(B) **Drilling and spacing unit with ratable allowables.** In a drilling and spacing unit with ratable allowables, the current monthly ratable allowable for a well shall be compared with the second prior month's production from the well. If production was less than the current monthly ratable allowable, the difference between the production and the ratable allowable is underage. Aside from any adjustment to the pool allowable required by pool rules, only reinstated cancelled underage under (k) of this Section shall increase any subsequent monthly ratable allowable for the well.

(h) **Overage limits.**

(1) **For all pools Except the Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro.** For all pools except the Red Oak Fanshawe, Red Oak Red Oak, and the Red Oak Spiro, the overage limit is six times:

(A) The basic allowable for the drilling and spacing unit, if the overage carried on a unit basis; or

(B) The well's share of the basic allowable for the drilling and spacing unit, if the well receives a ratable allowable.

(2) **For the Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro Pools.** For the Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro Pools, the overage limit is 168 times:

(A) The basic allowable for the drilling and spacing unit, if the overage is carried on a unit basis; or

(B) The well's share of the basic allowable for the drilling and spacing unit, if the well receives a ratable allowable.

(3) **Mandatory curtailment for excessive overage.**

(A) **Single well drilling and spacing unit.** If accumulated overage from a single well drilling and spacing unit exceeds the applicable overage limit, production from the unit shall be curtailed to 25 percent of the monthly allowable until accumulated overage is reduced below the overage limit.

(B) **Multiple well unit without ratable allowables.** In a multiple well drilling and spacing unit without ratable allowables, if accumulated overage for the unit exceeds the applicable overage limit, the unit production shall be curtailed to 25 percent of its monthly allowable until the accumulated overage is reduced below the overage limit.

(C) **Multiple well unit with a ratable allowable.** In a multiple well drilling and spacing unit with one or more wells subject to a ratable allowable, if the accumulated overage for a well exceeds its overage limit, production from the well shall be curtailed to 25 percent of its monthly ratable allowable until the well's accumulated overage is reduced below its overage limit.

(i) **Underage limits.**

(1) **For the Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro Pools.** For the Red Oak Fanshawe, Red Oak Red Oak, and Red Oak Spiro Pools (Pool Nos. 456, 457 and 458) located in Latimer and LeFlore Counties, Oklahoma, the underage limit is three times the status factor for:

(A) The drilling and spacing unit,

(i) If the unit has only one well, or

(ii) If the unit has multiple wells but no unit well has a ratable allowable; or

(B) The well, if a well has a ratable allowable.

(2) **For all other special allocated gas pools subject to this Section.** For all other special allocated gas pools subject to the Section, the underage limit is six times the status factor for:

(A) The drilling and spacing unit, if the status factor is determined on a unit basis; or

(B) The well, if the well is subject to a ratable allowable.

(j) **Cancellation of underage.**

(1) **Underage in excess of the underage limit.** If accumulated underage exceeds the applicable underage limit, the accumulated underage shall be cancelled.

(2) **Subsequent underage.** After cancellation, underage shall not accrue until after:

(A) The drilling and spacing unit produces a current monthly allowable, if the unit wells share a unit allowable; or

(B) A well with a ratable allowable produces a current monthly ratable allowable.

(k) **Reinstatement of cancelled underage.**

(1) The operator may apply for reinstatement of cancelled underage by:

(A) An application for administrative approval on Form 1010, if filed within six months after cancellation of underage; or

(B) Application, notice, and hearing under OAC 165:5-7-1.

(2) Reinstated cancelled underage shall be available to increase the monthly allowable or ratable allowable for up to one year without cancellation. If reinstated underage is cancelled, the operator may reapply under (1) of this subsection.

(3) For the Guymon-Hugoton special allocated gas pool, the operator of any drilling and spacing unit in such pool which unit has accumulated cancelled underage credited thereto on the records of the Commission prior to July 1, 1998 shall have until January 1, 2000 to file an application with the Commission pursuant to OAC 165:5-7-1 for the reinstatement of such accumulated cancelled underage as credited to such unit prior to July 1, 1998. Upon the filing of such an application, the cause seeking reinstatement of such accumulated cancelled underage shall be diligently prosecuted. In such proceeding for the reinstatement of such accumulated cancelled underage credited to such drilling and spacing unit prior to July 1, 1998, the Commission shall determine the portion of such accumulated cancelled underage which is proper and valid under the special pool allocation rules (field rules) applicable to the Guymon-Hugoton special allocated gas pool and shall reinstate only such portion that is determined to be proper and valid under such special pool allocation rules (field rules). If an application for reinstatement of any such accumulated cancelled underage credited to a drilling and spacing unit on the records of the Commission prior to July 1, 1998 is not filed with the Commission on or before January 1, 2000, such accumulated cancelled underage shall be permanently deleted from the records of the Commission and shall not thereafter be able to be reinstated or used for any other purpose under the special pool allocation rules (field rules) applicable to the Guymon-Hugoton special allocated gas pool.

(l) **Effect of reinstatement of underage on pool allowables.** If cancelled underage has been distributed among the capable wells in the pool, reinstated underage shall not be deducted for the allowables of the capable wells which received distributed cancelled underage.

(m) **Test exempt status.**

(1) **No allowable without test.** For all pools except West Cheyenne Upper Morrow and Purvis Chert, no allowable shall be assigned unless:

(A) **Single well drilling and spacing unit.** The operator submits the required test or the unit has test exempt status under this Section.

(B) **Multiple well drilling and spacing unit.** In a multiple well drilling and spacing unit, the operator of at least one well in the unit submits the required test in accordance with applicable pool rules or the unit is granted test exempt status under this Section.

(2) **Automatic test exempt status.**

(A) **For the West Cheyenne Upper Morrow and Purvis Chert Pool.** For the West Cheyenne Upper Morrow and Purvis Chert, a drilling and spacing unit shall have test exempt status as follows:

(i) **Single well drilling and spacing unit.** In a single well drilling and spacing, the well operator does not submit either an initial or an annual test.

(ii) **Multiple well drilling and spacing unit.** In a multiple well drilling and spacing unit, none of the well operators in the unit submit either an initial or annual test. A test exempt drilling and spacing unit on the West Cheyenne Upper Morrow and Purvis Chert Pools shall have a minimum allowable under the applicable orders establishing and modifying pool rules as opposed to (b) of this Section.

(3) **Test exempt status upon requests for all other pools.** For all other pools except Guymon-Hugoton a drilling and spacing unit shall be test exempt upon written request to the Conservation Division if the potential for the unit does not exceed:

(A) The applicable minimum allowable under this Section.

(B) A double minimum allowable, if the Conservation Division has granted a double minimum to the unit.

(4) **Termination of requested test exempt status.**

(A) **Automatic termination.** Requested test exempt status shall terminate upon:

(i) **Submission of a retest.** Submission of a retest showing that the well has a potential in excess of a test exempt allowable, or;

(ii) **Overproduction.**

(I) **Single well drilling and spacing unit.** If gas production from a single well drilling and spacing unit exceeds a test exempt allowable during any month while the well has test exempt status, the unit shall lose test exempt status beginning with next month following the month with overproduction.

(II) **Multiple well drilling and spacing unit.** If total gas production from a multiple well drilling and spacing unit exceeds the minimum allowable during any month while the unit has test exempt status, the unit shall lose test exempt status beginning with the next month following the month with overproduction.

(B) **Reinstatement of test exempt status after automatic termination.** After termination of test exempt status for overproduction, the Conservation Division shall not reinstate test exempt status until:

(i) The operator requests test exempt status; and

(ii) The allowable year during which overproduction occurred expires.

[**SOURCE:** Amended in Rule Making 970000011, eff 7-1-98; Amended in Rule Making 980000033, eff 7-1-99; Amended in Rule Making 200100006, eff 7-1-01; Amended in Rule Making 200400006, eff 7-1-04]

165:10-17-10. Unallocated pools [RESERVED]

165:10-17-11. Maximum permitted rates of production for unallocated gas wells

(a) **Scope.**

(1) This Section shall apply to each gas well in unallocated status except as otherwise provided by Commission order. The Commission may establish different production rates by:

(A) Location exception order.

(B) Establishment of pool rules for the common source of supply.

(C) Other order adjusting gas production from the well.

(2) For purposes of this Section, the term "well" shall include any drilling and spacing unit with multiple unallocated gas wells, which do not receive separate maximum permitted rates of production by Commission order.

(3) For the purposes of this Section, the term "allowable formula" shall mean the formula used by the Commission for the determination of the daily rates for capable and minimum wells.

(4) For purposes of this Section, the term "capable well" shall refer to those unallocated gas wells having a wellhead absolute flow potential of 2000 mcf/d or greater. All other wells are minimum wells.

(5) For purposes of this Section, the term "daily natural flow" means the wellhead absolute open flow potential determined in the manner described in OAC 165:10-17-6 and OAC 165:10-17-7.

(b) **Commission authority and responsibility.** Production shall be governed by the provisions of 52 O.S. Section 29. Pursuant to said statute, the Commission has the power and authority to adjust allowables to meet reasonable market demand. The Commission, upon its own application, after notice and hearing, shall establish allowables which may be greater or lesser than those set forth in 52 O.S. Section 29.

(c) **Procedure.**

(1) Allowables for wells other than those provided in subsections (a), (e), (f), and (g) of this Section shall be determined pursuant to a proration hearing held at least semiannually for the proration periods of April through September and October through March. The Commission may hold additional proration hearings at shorter intervals if necessary. At least 15 days prior to scheduled semiannual hearings, the Commission shall publish

in a newspaper of general circulation in Oklahoma County, the proposed allowable formula for the next proration period. The semiannual proration hearings shall be held at least 30 days prior to the proration period for which the allowable is being determined. Such hearing shall be for the purpose of gathering comments and hearing testimony from all interested parties concerning the determination of reasonable market demand for the next proration period. As a guideline, but not to the exclusion of any other information that the Commission deems pertinent, the following may be considered by the Commission in determining reasonable market demand and corresponding allowables:

(A) Production from prior years.

(B) Production from the most recent proration period.

(C) Wellhead open flow potentials.

(D) New wells, recompletions, temporarily abandoned wells and plugged wells.

(E) Gas which is available but is not being produced at the present time.

(F) Changes in existing gas markets, forecasts, and new markets for Oklahoma gas.

(G) State-wide gas production and the portion thereof attributable to unallocated gas wells.

(H) Overproduction and underproduction from the preceding proration period.

(2) After a proration hearing, the Commission shall publish in a newspaper of general circulation in Oklahoma County, the allowable formula, no later than 15 days prior to the proration period for which the allowable formula is determined.

(d) **Emergency allowables.**

(1) When the Commission determines that an emergency gas supply situation exists, the Commission may establish an emergency allowable. The emergency allowable shall provide for the protection of correlative rights including those relating to minimum wells and penalized wells.

(2) The Commission may extend or change the emergency allowable for as long as an emergency exists. However, any authorized extension of the emergency allowable shall be by order after notice and hearing.

(e) **Exceptions.** Upon application, notice, and hearing, the Commission may establish a different allowable for good cause shown.

(f) **Exclusion for hardship and distressed wells.** The allowable established under this Section shall not limit rates established by special order for those wells classified as hardship or distressed wells.

(g) **Discovery gas well.**

(1) For thirty (30) months from the date of first production, a discovery gas well, as defined in this subsection, subject to the provisions of this Section, shall have a production allowable which shall be the greater of one thousand three hundred (1,300) mcf/d or sixty-five percent (65%) of the absolute open flow (AOF) as specified by the Corporation Commission. Such discovery well allowable shall not be available for any discovery gas well wherein two (2) or more separate common sources of supply are commingled and one (1) common source of supply would not qualify a new gas well as a discovery gas well, as defined in this Section.

(2) Drilling and spacing units which are downspaced after June 1, 1997, shall not qualify for the discovery gas well allowable.

(3) For purposes of this subsection, "discovery gas well" shall mean a new gas well, which is not an off-pattern well, is the first well completed in a common source of supply within a drilling and spacing unit and is at least one (1) mile from all existing gas wells which are completed in the same common source of supply. In the absence of spacing, a discovery well shall be the first well in the governmental section completed in a common source of supply, provided that the discovery gas well shall not be drilled closer than one thousand three hundred twenty (1,320) feet from the boundaries of the governmental section and is at least one (1) mile from all existing gas wells which are completed in the same common source of supply.

(h) **Minimum compliance.**

(1) The Conservation Division shall monitor well production at least annually. The allowable for a well shall be based on the product of the number of days in the proration period, multiplied by the applicable allowable formula, provided that said product shall be reduced for overproduction as provided by this Section or by any penalty or limitation on production imposed by applicable Commission order.
(2) Any overproduction existing at the end of the calendar year shall be applied against the allowable for the next calendar year. Furthermore, the overproduced well shall be required to make up overproduction within the first six months of the next calendar year. If the overproduction is not made up within that time period, the flow rate shall not exceed ten percent of the then current allowable until the overproduction is made up.

[**Source:** Amended at 9 Ok Reg 3969, eff 8-28-92 (emergency); Amended at 10 Ok Reg 1275, eff 9-25-92 (emergency); Amended at 10 Ok Reg 1579, eff 5-13-93; Amended in Rule Making 97000002, eff 7-1-97; Amended in Rule Making 980000011, eff 7-1-98; Amended in Rule Making 200200017, eff 7-1-02]

165:10-17-12. New proposed well classification for the priority schedule
(a) Any common purchaser as defined in 52 O.S. 1981, Section 240 shall purchase all the gas which may be offered for sale and which may reasonably be reached by its trunk lines or gathering lines, without discrimination in favor of one producer as against another or in favor of any one source of supply as against another, except as authorized by the Commission under (b) of this Section.
(b) In the interest of the prevention of waste and protection of correlative rights, the following priority schedule shall be implemented by any first purchaser of gas whenever the permitted production from all wells in any common source of supply in its system in this State, including gas which is processed, is in excess of that purchaser's reasonable market demand; provided, however, if the first purchaser does not contractually control wellhead production, the first taker of gas shall be responsible for implementation of the following priority schedule.
(1) Priority One - Hardship and distressed wells.
(2) Priority Two - Enhanced recovery wells.
(3) Priority Three - Wells producing casinghead gas and associated gas.
(c) With respect to all gas not identified in (b) of this Section, the collective market demand of multiple common purchasers on each pipeline system for natural gas production from each well and each common source of supply in this state shall be deemed adequate to meet statutory purchasing requirements unless the Commission, upon its own motion or upon verified application by any interested party and after notice and hearing, as hereinafter provided, shall determine that differing obligations shall be imposed upon any common purchaser in order to protect correlative rights, the interest of the public or otherwise meet the requirements of applicable law.
(d) When permitted production of gas from all Priority 1, 2, and 3 wells from which a purchaser or taker is required to take exceeds the market demand of said purchaser or taker, all reductions in gas purchases or takes from wells in each priority shall be ratable. All production from the lower priority wells shall be shut-in before production from any well in the next higher priority is curtailed.
(e) Any well which meets the definition of more than one priority shall be assigned the higher priority.
(f) When there is more than one purchaser or taker involved in the taking of gas from a well into any purchaser's system, all purchasers and takers within that system shall be responsible for compliance with this Section.
(g) Upon a verified application of the Director of the Conservation Division or any other person, the Commission, after notice and hearing, may determine if gas has been ratably purchased or taken from a common source of supply on a system-wide basis in accordance with this Section without avoidable waste and

with equitable participation in production and markets by all operators and other interested parties.
(h) First purchasers or takers of gas produced from Priority 1, 2, or 3 wells, who anticipate curtailing production from such wells, shall file by the twentieth day of each month nominations of requirements for gas to be purchased and/or used by them during the following month (Form 1004B). Nominations shall be made according to priorities established in (b) of this Section. Curtailments of production and acceptance of deliveries of gas shall be performed in accordance with (a) and (b) of this Section.
(i) Any interested party may file an application requesting that the Commission, for good cause shown, authorize limited deviation from the general priority schedule provided under (b) of this Section. The Commission, on its own motion, may initiate a review of the continued need for such a limited deviation. After notice and hearing, the Commission may authorize limited deviation upon finding that the same is necessary in order to prevent waste, protect correlative rights, and is otherwise required by the public interest or authorized by law.

[**Source:** Amended at 12 Ok Reg 2045, eff 7-1-95]

165:10-17-13. Use of gas for carbon black
Gas may not be used for the manufacture of carbon black or similar products predominately carbon, except as specifically authorized by the Commission after notice and hearing.

165:10-17-14. Waste of tail gas at gasoline plants
The duty, obligation, and jurisdiction of the Commission to prevent waste of tail gas where an additional market is available shall not be circumvented by any exclusive provisions in private contracts between the owners and the purchasers of tail gas.

165:10-17-15. Gas removed from storage
The rules relating to gas production from pools shall not apply to gas being removed from storage except and unless waste is involved.

165:10-17-16. Reports
A calendar year shall constitute the accounting period for each unallocated gas well. At the end of each calendar year, the Conservation Division will mail an original and one copy of Machine Accounting Form 1007A (Unallocated Gas Well Survey) to the operator, and the operator shall complete and file the original form with the Conservation Division on or before the following February 15th and retain the copy for his own use.

PART 6. PRODUCTION ENHANCEMENT PROJECTS

165:10-21-21. General

Exemption from the levy of gross production tax on the incremental production which results from a production enhancement project with a project beginning date on or after July 1, 1994, and prior to July 1, 2006 shall be determined according to the provisions of this Part, which have been jointly adopted by the Oklahoma Corporation Commission and Oklahoma Tax Commission pursuant to 68 O.S. Section 1001(M)(1).

[SOURCE: Added at 12 Ok Reg 491, eff 1-1-95 (emergency); Added at 12 Ok Reg 1605, eff 7-1-95; Amended at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01, Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-22. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Base production" means the average monthly amount of production for the twelve-month (12) period immediately prior to the commencement of the project or the average monthly amount of production for the twelve-month period immediately prior to the commencement of the project less the monthly rate of production decline for the project for each month beginning one hundred eighty (180) days prior to the commencement of the project. The monthly rate of production decline shall be equal to the average extrapolated monthly decline rate for the twelve-month period immediately prior to the commencement of the project based on the production history of the well. If the well or wells covered by the application had production for less than the full twelve-month period prior to the filing of the application for the production enhancement project, the base production shall be the average monthly production for the months during that period that the well or wells produced.

"Effective date" means the project beginning date for the production enhancement project.

"Exemption period" means a period of twenty-eight (28) months from the date of first sale after completion of the production enhancement project.

"Incremental production" means the amount of crude oil, natural gas or other hydrocarbons which are produced as a result of the production enhancement project in excess of the base production.

"Production enhancement project" means: for production enhancement projects having a project beginning date prior to July 1, 1997, any workover as defined in this Section, recompletion as defined in this Section, or fracturing of a producing well; for production enhancement projects having a project beginning date on or after July 1, 1997, and prior to July 1, 2006, "production enhancement project" means any workover as defined in this Section, recompletion as defined in this Section, reentry of plugged and abandoned wellbores, or addition of well or field compression.

"Recompletion" means: for production enhancement projects having a project beginning date prior to July 1, 1997, any downhole operation in an existing oil or gas well that is conducted to establish production of oil or gas from any geological interval not currently completed or producing in such existing oil or gas well; for production enhancement projects having a project beginning date on or after July 1, 1997, and prior to July 1, 2006, "recompletion" means any downhole operation in an existing oil or gas well that is conducted to establish production of oil or gas from any geologic interval not currently completed or producing in such existing oil or gas well within the same or a different geologic formation.

"Workover" means any downhole operation in an existing oil or gas well that is designed to sustain, restore or increase the production rate or ultimate recovery in a geologic interval currently completed or producing in said existing oil or gas well. For production enhancement projects having a project beginning date prior to July 1, 1997, "workover" includes, but is not limited to, acidizing, reperforating, fracture treating, sand/paraffin removal, casing repair, squeeze cementing, or setting bridge plugs to isolate water productive zones from oil or gas productive zones, or any combination thereof. For production enhancement projects having a project beginning date on or after July 1, 1997, and prior to July 1, 2006, "workover" includes, but is not limited to, the following: acidizing; reperforating; fracture treating; sand/paraffin/scale removal or other wellbore cleanouts; casing repair; squeeze cementing; installation of compression on a well or group of wells or artificial lifts on oil and/or gas wells, including plunger lifts, rod pumps, submersible pumps and coiled tubing velocity strings; downsizing existing tubing to reduce well loading; downhole commingling; bacteria treatments; upgrading the size of pumping unit equipment; setting bridge plugs to isolate water production zones; or any combination thereof. "Workover" shall not mean the routine maintenance, routine repair, or like-for-like replacement of downhole equipment such as rods, pumps, tubing, packers, or other mechanical devices.

[**SOURCE**: Added at 12 Ok Reg 491, eff 1-1-95 (emergency); Added at 12 Ok Reg 1605, eff 7-1-95; Amended at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 97000025, eff 7-1-98; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-23. Qualification procedure

The well operator or one of the working interest owners in the well, on behalf of the well operator and the other owners of the well, shall apply for qualification of the production enhancement project and incremental production, at the Oklahoma Corporation Commission on OCC Form 1534.

(1) OCC Form 1534 shall be completed in its entirety, and together with supporting documentation, shall be submitted to the Technical Services Department of the Conservation Division of the Oklahoma Corporation Commission for review.
(2) If the Department approves the application, an order of the Oklahoma Corporation Commission shall be issued, and a copy of the order shall be forwarded to the operator.
(3) If the application is denied or refused, or approval is delayed beyond sixty (60) days, the applicant may seek review by application, notice and hearing.

[SOURCE: Added at 12 Ok Reg 491, eff 1-1-95 (emergency); Added at 12 Ok Reg 1605, eff 7-1-95; Amended at 13 Ok Reg 2933, eff 7-11-96]

165:10-21-24. Rebates - Refund procedure
(a) **Request to Oklahoma Tax Commission for a tax refund.** If the Oklahoma Corporation Commission grants the application, the operator or one of the working interest owners in the well, on behalf of the well operator and the other owners of the well, shall make its request for refund by letter to the Audit Division, Oklahoma Tax Commission. Such letter request shall state the reason for refund and the amount claimed and must be accompanied by the following:
(1) A Corporation Commission order certifying the well as production enhanced.
(2) A Copy of OCC Form 1534 submitted to the Corporation Commission.
(3) A properly completed OTC Form 328 Gross Production 841/495 Refund Report.
(4) If the refund request is filed by any person other than the party named in the Oklahoma Corporation Commission order, a notarized affidavit, signed by the party named in the order must be filed, authorizing the applicant to apply for the refund.
(b) **No time limitation on rebate for prior periods; claim limitation after July 1, 2003.** Approval of a "Production Incentive" for production periods prior to July 1, 2003 shall not be time-barred by either the date of certification or the date of filing a claim for refund of the rebate of gross production tax. Effective July 1, 2003, claims for rebate filed with the Oklahoma Tax Commission shall be subject to a time limitation pursuant to Title 68 O.S., Section 1001(L).
(c) **Method of appeal.** If the refund is denied, the applicant may file an appeal under the provisions of Title 68, Sections 227 and 228 of the Oklahoma Statutes.

PART 7. RE-ESTABLISHMENT OF PRODUCTION FROM AN INACTIVE WELL

165:10-21-35. General
Exemption from the levy of gross production tax on the re-establishment of production from an inactive well shall be determined according to the provisions of this Part, which have been jointly adopted by the Oklahoma Corporation Commission and Oklahoma Tax Commission pursuant to 68 O.S. Section 1001(M)(1).

[SOURCE: Added at 12 Ok Reg 491, eff 1-1-95 (emergency); Added at 12 Ok Reg 1605, eff 7-1-95; Amended at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01]

165:10-21-36. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Effective date" means the date on which the reestablishment of production has occurred.

"Exemption period" means a period of twenty-eight (28) months from the date upon which production from an inactive well is reestablished.

"Inactive well" means a well which may be defined under one (1) of the following three (3) categories:

(A) A well which after July 1, 1997 experiences mechanical failure or loss of mechanical integrity, as defined by the Corporation Commission, including but not limited to, casing leaks, collapse of casing or loss of equipment in a wellbore, or any similar event which causes cessation of production, shall be considered an inactive well. For use within this sub-paragraph "mechanical failure" means a well which experiences mechanical failure or loss of mechanical integrity because of, but not limited to, casing leaks, collapse of casing or loss of equipment in a wellbore, or any similar event which results in a workover of the well and cessation of production as evidenced by the use of a workover rig or other mechanical device being placed over the well to repair the well or equipment.

(B) A well on which work to reestablish production commenced on or after July 1, 1997, and on or before June 30, 2006, that has not produced oil, gas or oil and gas for a period of not less than one (1) year as evidenced by the appropriate forms on file with the Oklahoma Corporation Commission reflecting the well.

(C) A well on which work to reestablish production commenced on or after July 1, 1994, and on or before June 30, 1997, that has not produced oil, gas or oil and gas for a period of not less than two (2) years as evidenced by the appropriate forms on file with the Oklahoma Corporation Commission reflecting the well's status.

[**SOURCE:** Added at 12 Ok Reg 491, eff 1-1-95 (emergency); Added at 12 Ok Reg 1605, eff 7-1-95; Amended in Rule Making 97000025, eff 7-1-98; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-37. Qualification procedure

The well operator or one of the working interest owners, on behalf of the well operator and the other owners of the well, shall apply for qualification of the well and production at the Oklahoma Corporation Commission on OCC Form 1534.

(1) OCC Form 1534 shall be completed in its entirety, and together with supporting documentation, shall be submitted to the Technical Services Department of the Conservation Division of the Oklahoma Corporation Commission for review.

(2) If the Department approves the application, an order of the Oklahoma Corporation Commission shall be issued, and a copy shall be forwarded to the operator.

(3) If the application is denied or refused, or approval is delayed beyond sixty (60) days, the applicant may seek review by application, notice and hearing.

[SOURCE: Added at 12 Ok Reg 491, eff 1-1-95 (emergency); Added at 12 Ok Reg 1605, eff 7-1-95; Amended at 13 Ok Reg 2933, eff 7-11-96]

165:10-21-38. Rebates - Refund procedure

(a) **Request to Oklahoma Tax Commission for a tax refund.** If the Oklahoma Corporation Commission grants the application, the operator or one of the working interest owners in the well, on behalf of the well operator and the other owners of the well, shall make its request for refund by letter to the

Audit Division, Oklahoma Tax Commission. Such letter request shall state the reason for refund and the amount claimed and must be accompanied by the following:

(1) A Corporation Commission order certifying the well as an inactive well for which production has been reestablished.

(2) A copy of OCC Form 1534 submitted to the Corporation Commission.

(3) A copy of an approved OTC Form 320C that shows the date of the re-establishment of production of oil and/or gas.

(4) A properly completed OTC Form 328 Gross Production 841/495 Refund Report.

(5) If the refund request is filed by any person other than the party named in the Oklahoma Corporation Commission order, a notarized affidavit, signed by the party named in the order must be filed, authorizing the applicant to apply for the refund.

(b) **No time limitation on rebate for prior periods; claim limitation after July 1, 2003.** Approval of a "Reestablished Incentive" for production periods prior to July 1, 2003 shall not be time-barred by either the date of certification or the date of filing a claim for refund of gross production tax. Effective July 1, 2003, claims for rebate filed with the Oklahoma Tax Commission shall be subject to a time limitation pursuant to Title 68 O.S., Section 1001(L).

(c) **Method of appeal.** If the refund is denied, the applicant may file an appeal under the provisions of Title 68, Sections 227 and 228 of the Oklahoma Statutes.

[**SOURCE:** Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule making 200300001, eff 7-1-03; Amended in Rule Making 200400006, eff 7-1-04]

PART 8. DEEP WELLS

165:10-21-45. General

(a) **General provisions.** Exemption from the levy of gross production tax on the production of gas, oil, or gas and oil from wells certified as being "Deep Wells" set out in 68 O.S. §.1001(H).shall be determined according to the provisions of this Part, which have been jointly adopted by the Oklahoma Corporation Commission and the Oklahoma Tax Commission pursuant to 68 O.S. § 1001(M)(1).

(b) **Definitions.** For purposes of qualifying for the exemption, **"depth"** means the length of the maximum continuous string of drill pipe utilized between the drill bit face and the drilling rig's kelly bushing.

(c) **Exemption for wells spudded between July 1, 1994, and June 30, 2000, to a depth of fifteen thousand (15,000) feet or greater.** Deep wells spudded between July 1, 1994, and June 30, 2000, and drilled to a depth of fifteen thousand (15,000) feet or greater shall be exempt from the gross production tax, beginning from the date of first sale, for a period of twenty-eight (28) months.

(d) **Exemption for wells spudded between July 1, 1997, and June 30, 2006, to a depth of twelve thousand five hundred (12,500) feet.** Deep wells spudded between July 1, 1997, and June 30, 2006, and drilled to a depth of twelve thousand five hundred (12,500) feet or greater shall be exempt from the gross production tax, beginning from the date of first sale, for a period of twenty-eight (28) months.

(e) **Exemption for wells spudded between July 1, 2002, and June 30, 2006.** Deep wells spudded between July 1, 2002, and June 30, 2006, shall be eligible for an exemption from the gross production tax which shall begin from the date of first sale, and vary as to duration in relation to the depth of the well.

(1) **12,500 to 14,999 feet.** The duration of the exemption for wells drilled to this depth is twenty-eight (28) months.

(2) **15,000 to 17,499 feet.** The duration of the exemption for wells drilled to this depth is forty-eight (48) months.

(3) **17,500 feet or greater.** The duration of the exemption for wells drilled to this depth is sixty (60) months.

[SOURCE: Added at 12 Ok Reg 491, eff 1-1-95 (emergency); Added at 12 Ok Reg 1605, eff 7-1-95; Amended at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 970000025, eff 7-1-98; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200300001, eff 7-1-03; Amended in Rule Making 200400006, eff 7-1-04]

[SOURCE: Added at 12 Ok Reg 491, eff 1-1-95 (emergency); Added at 12 Ok Reg 1605, eff 7-1-95; Amended at 13 Ok Reg 2933, eff 7-11-96; Revoked in Rule Making 97000025, eff 7-1-98]

165:10-21-47. Qualification procedure

The well operator or one of the working interest owners, on behalf of the well operator and the other owners of the well, shall apply for qualification of the well at the Oklahoma Corporation Commission on OCC Form 1534.

(1) OCC Form 1534 shall be completed in its entirety, and together with supporting documentation, shall be submitted to the Technical Services Department of the Conservation Division of the Oklahoma Corporation Commission for review.

(2) If the Department approves the application, an order of the Oklahoma Corporation Commission shall be issued, and a copy shall be forwarded to the operator.

(3) If the application is denied or refused, or approval is delayed beyond sixty (60) days, the applicant may seek review by application, notice and hearing.

[SOURCE: Added at 12 Ok Reg 491, eff 1-1-95 (emergency); Added at 12 Ok Reg 1605, eff 7-1-95; Amended at 13 Ok Reg 2933, eff 7-11-96]

165:10-21-47.1. Rebates-Refund procedure

(a) **Request to Oklahoma Tax Commission for a tax refund.** If the Oklahoma Corporation Commission grants the application, the operator or one of the working interest owners in the well, on behalf of the well operator and the other owners of the well, shall make its request for refund by letter to the Audit Division, Oklahoma Tax Commission. Such letter request shall state the reason for refund and the amount claimed and must be accompanied by the following:

(1) A Corporation Commission order certifying the well as a well spudded within the applicable time periods and drilled to the prescribed depths provided in OAC 165:10-21-45.

(2) A copy of OCC Form 1534 submitted to the Corporation Commission.

(3) A copy of an approved OTC Form 320A that shows date of first sale of production.

(4) A properly completed OTC Form 328 Gross Production 841/495 Refund Report.

(5) If the refund request is filed by any person other than the party named in the Oklahoma Corporation Commission order, a notarized affidavit, signed by the party named in the order must be filed, authorizing the applicant to apply for the refund.

(b) **No time limitation on rebate for prior periods; claim limitation after July 1, 2003.** Approval of a "Deep Well Incentive" for production periods prior to July 1, 2003 shall not be time-barred by either the date of certification or the date of filing a claim for refund of the rebate of gross production tax. Effective July 1, 2003, claims for rebate filed with the Oklahoma Tax Commission shall be subject to a time limitation pursuant to Title 68 O.S., Section 1001(L).

(c) **Method of appeal.** If the refund is denied, the applicant may file an appeal under the provisions of Title 68, Sections 227 and 228 of the Oklahoma Statutes.

PART 9. NEW DISCOVERY WELLS

165:10-21-55. General
(a) Exemption from the levy of gross production tax on the production of gas, oil, or gas and oil from wells spudded or reentered between July 1, 1995 and July 1, 2006, which qualify as a new discovery well pursuant to Title 68, Section 1001(I), shall be determined according to the provisions of this Part, which have been jointly adopted by the Oklahoma Corporation Commission and the Oklahoma Tax Commission pursuant to Title 68, Section 1001(M)(1).
(b) **"New discovery"** means production of oil, gas or oil and gas from:
(1) A well spudded or reentered prior to July 1, 1997, which discovers crude oil in paying quantities and is located more than one mile from the nearest oil well producing from the same interval.
(2) A well, spudded or reentered on or after July 1, 1997, and prior to July 1, 2006, which discovers crude oil in paying quantities and is located more than one mile from the nearest oil well producing from the same interval of the same formation.
(3) A well, spudded or reentered prior to July 1, 1997, which discovers crude oil in paying quantities beneath current production in a deeper producing formation located more than one mile from the nearest oil well producing from the same deeper interval.
(4) A well, spudded or reentered on or after July 1, 1997, and prior to July 1, 2006, which discovers crude oil in paying quantities beneath current production in a deeper producing interval located more than one mile from the nearest oil well producing from the same deeper interval.
(5) A well, spudded or reentered, prior to July 1, 1997, which discovers natural gas in paying quantities and is located more than two miles from the nearest gas well producing from the same producing interval.
(6) A well, spudded or reentered, on or after July 1, 1997, and prior to July 1, 2006, which discovers natural gas in paying quantities and is located more than two miles from the nearest gas well producing from the same producing interval.
(7) A well, spudded or reentered, prior to July 1, 1997, which discovers natural gas in paying quantities beneath current production in a deeper producing interval that is more than two miles from the nearest gas well producing from the same deeper interval.
(8) A well, spudded or reentered, on or after July 1, 1997, and prior to July 1, 2006, which discovers natural gas in paying quantities beneath current production in a deeper producing interval that is more than two

miles from the nearest gas well producing from the same deeper producing interval.

165:10-21-56. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Effective date" means the date the well was spudded or the beginning date for a re-entered well.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 97000025, eff 7-1-98]

165:10-21-57. Qualification procedure

The well operator or one of the working interest owners, on behalf of the well operator and the other owners of the well, shall apply for qualification of the well at the Oklahoma Corporation Commission on OCC Form 1534.

(1) OCC Form 1534 shall be completed in its entirety, and together with supporting documentation, shall be submitted to the Technical Services Department of the Oklahoma Corporation Commission for review.

(2) If the Department approves the application, an order of the Oklahoma Corporation Commission shall be issued, and a copy shall be forwarded to the operator.

(3) If the application is denied or refused, or approval is delayed beyond sixty (60) days, the applicant may seek review by application, notice and hearing.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96]

165:10-21-58. Rebates - Refund procedure

(a) **Request to Oklahoma Tax Commission for a tax refund.** If the Oklahoma Corporation Commission grants the application, the operator or one of the working interest owners in the well, on behalf of the well operator and the other owners of the well, shall make its request for refund by letter to the Audit Division, Oklahoma Tax Commission. Such letter request shall state the reason for refund and the amount claimed and must be accompanied by the following:

(1) A Corporation Commission order certifying the well as a new discovery well spudded or re-entered between July 1, 1995 and June 30, 2006.

(2) A copy of OCC Form 1534 submitted to the Corporation Commission.

(3) A copy of an approved OTC Form 320A that shows date of first sale of production.

(4) A properly completed OTC Form 328 Gross Production 841/495 Refund Report.

(5) If the refund request is filed by any person other than the party named in the Oklahoma Corporation Commission order, a notarized affidavit, signed by the party named in the order must be filed, authorizing the applicant to apply for the refund.

(b) **No time limitation on rebate for prior periods; claim limitation after July 1, 2003.** Approval of a "New Discovery Incentive" for production periods prior to July 1, 2003 shall not be time-barred by either the date of certification or the date of filing a claim for refund of the rebate of gross production tax. Effective July 1, 2003, claims for rebate filed with the Oklahoma Tax Commission shall be subject to a time limitation pursuant to Title 68 O.S., Section 1001(L).

(c) **Method of appeal.** If the refund is denied, the applicant may file an appeal under the provisions of Title 68, Sections 227 and 228 of the Oklahoma Statutes.

PART 11. HORIZONTALLY DRILLED PRODUCING WELLS

165:10-21-65. General

Exemption from the levy of Gross Production Tax on horizontally drilled producing wells set out in 68 O.S. § 1001(E) shall be determined according to the provisions of this Part, which have been jointly adopted by the Oklahoma Corporation Commission and the Oklahoma Tax Commission pursuant to law. [See: 68 O.S. §1001(M)(1)]

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200300001, eff 7-1-03]

165:10-21-66. Definitions

In addition to terms defined in 165:10-1-2, the following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Angle of deviation" means that angle in which a wellbore may deviate from the vertical.

"Date of completion of a gas well" means the date that gas is capable of being delivered to a pipeline purchaser.

"Date of completion of an oil well" means the date that the well first produces into the lease tanks through permanent well head equipment.

"Effective date" means that the first production must have commenced after July 1, 1995 and before July 1, 2006.

"Horizontal displacement" means that distance drilled into the pay zone of a formation at an angle exceeding seventy (70) degrees.

"Horizontally drilled payout" means the point at which gross working interest revenue from the horizontally drilled well equals the cost of drilling and completing such well.

"Horizontally drilled well" means an oil, gas, or oil and gas well drilled or completed in a manner which encounters and subsequently produces from a geological formation at an angle in excess of seventy (70) degrees from the vertical and which laterally penetrates a minimum of one hundred and fifty (150) feet into the pay zone of the formation.

"True vertical depth" means that depth measured from the surface perpendicular to the surface.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 97000025, eff 7-1-98; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-67. Qualification procedure

The well operator or one of the working interest owners in the well, on behalf of the well operator and the other owners of the well, shall apply for qualification of the production from horizontally drilled wells, at the Oklahoma Corporation Commission on OCC Form 1534.

(1) OCC Form 1534 shall be completed in its entirety, and together with supporting documentation, shall be submitted to the Technical Services Department of the Conservation Division of the Oklahoma Corporation Commission for review.

(2) If the Department approves the application, an order of the Oklahoma Corporation Commission shall be issued, and a copy of the order shall be forwarded to the operator.

(3) If the application is denied or refused, or approval is delayed beyond sixty (60) days, the applicant may seek review by application, notice and hearing.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96]

165:10-21-68. Rebates - Refund procedure

(a) **Request to Oklahoma Tax Commission for a tax refund.** If the Commission grants the application, the well operator or one of the working interest owners in the well, on behalf of the well operator and the other owners of the well, shall make its request for refund by letter to the Audit Division, Oklahoma Tax Commission. Such letter request shall state the reason for refund and the amount claimed and must be accompanied by the following:

(1) A Corporation Commission order certifying the well as a horizontally drilled well.

(2) A copy of OCC Form 1534 submitted to the Corporation Commission.

(3) A copy of an approved OTC Form 320A that shows the date of initial production.

(4) A properly completed OTC Form 328 Gross Production 841/495 Refund Report.

(5) If the refund request is filed by any person other than the party named in the Oklahoma Corporation Commission order, a notarized affidavit, signed by the party named in the order must be filed, authorizing the applicant to apply for the refund.

(b) **No time limitation on rebate for prior periods; claim limitation after July 1, 2003.** Approval of a "Horizontal Drilling Incentive" for production periods prior to July 1, 2003 shall not be time-barred by either the date of certification or the date of filing a claim for refund of the rebate of gross production tax. Effective July 1, 2003, claims for rebate filed with the Oklahoma Tax Commission shall be subject to a time limitation pursuant to Title 68 O.S., Section 1001(L).

(c) **Method of appeal.** If the refund is denied, the applicant may file an appeal under the provisions of Title 68, Sections 227 and 228 of the Oklahoma Statutes.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200300001, eff 7-1-03; Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-69. Time periods for exemption from gross production tax levied on horizontally drilled producing wells

(a) **General provisions.** The exemption for horizontally drilled wells qualified pursuant to this Part shall be determined from the project beginning date until project payback is achieved, and are limited in duration to the time periods set out in this Section.

(b) **Twenty-four (24) month exemptions.** For production described in this subsection, duration of the exemption may not exceed a period of twenty-four

(24) months commencing with the date of initial production from the horizontally drilled well.

(1) **Production prior to July 1, 1994.** Any incremental production which results from a horizontally drilled well producing prior to July 1, 1994.

(2) **Production prior to July 1, 2002, which commenced after July 1, 1995.** Any horizontally drilled well producing prior to July 1, 2002, which production commenced after July 1, 1995.

(c) **Forty-eight (48) month exemption.** For a horizontally drilled well producing prior to July 1, 2006, which production commenced after July 1, 2002, the duration of the exemption may not exceed a period of forty-eight (48) months commencing with the date of initial production from the horizontally drilled well. [See: 68 O.S. Supp. 2002, Section 1001(E)(1)]

PART 13. INCREMENTAL PRODUCTION FROM ENHANCED RECOVERY PROJECTS

165:10-21-75. General

Exemption from the levy of gross production tax on the incremental production of oil or other liquid hydrocarbons attributable to the working interest owners of an enhanced recovery project and property shall be determined according to the provisions of this Part.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01]

165:10-21-76. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Base production amount" means the average monthly amount of productions for the twelve (12) month period immediately prior to the project beginning date minus the monthly rate of production decline for the project or property for each month beginning one hundred eighty (180) days prior to the project beginning date.

"Completion date" means the date a well is first capable of being used for the injection of liquids, gases or other matter, or is capable of producing crude oil or other liquid hydrocarbons through permanent wellhead equipment.

"Enhanced recovery project costs" means the incremental project costs that are allowed as payback factors in determining the exemptions from the levy of gross production tax of project incremental production.

"Existing tertiary recovery project" means, for purposes of the exemption described in 68 O.S. Section 1001(D)(1), a tertiary recovery project whose beginning date is prior to October 16, 1987.

"Incremental production" means the amount of crude oil or other liquid hydrocarbons which are produced during an approved enhanced oil recovery operation and which are in excess of the base production amount of crude oil or other liquid hydrocarbons.

"Incremental working interest revenue" means the gross value of the incremental production, less the royalty interest therein.

"Monthly rate of production decline" means a rate equal to the average extrapolated monthly decline rate for the twelve (12) month period immediately prior to the project beginning date as determined by the Commission, based on the production history of the field, its current status, and sound reservoir engineering principles.

"New enhanced recovery project" means, for purposes of the exemption described in 68 O.S. Section 1001(D)(1), a secondary or tertiary recovery project whose beginning date is on or after October 16, 1987.

"Project beginning date" means the date on which the injection of liquids, gas or other matter begins on an enhanced recovery project.

"Project payback or payout" means that point at which the incremental working interest revenue from the enhanced recovery project equals the enhanced project costs.

"Secondary recovery properties" means secondary recovery properties approved or having an initial project beginning date on or after July 1, 2000 and before July 1, 2006, such that any incremental production attributable to the working interest which results from such secondary recovery property shall be exempt from the gross production tax levied pursuant to 68 O.S. Section 1001 for a period not to exceed five (5) years from the initial project beginning date or for a period ending upon the termination of the secondary recovery process, whichever occurs first. [Applicant may omit payback report for such secondary recovery properties.]

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200300001, eff 7-1-03; Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-77. Qualification procedure

The provisions of this Section establish criteria for determining if an operator of an enhanced recovery project or property has met the required conditions to qualify the incremental production from such project or property for the exemption from the Gross Production Tax. [**See:** 68 O.S. §1001]

(1) **Application to Oklahoma Corporation Commission; determination; order.** An operator seeking an exemption of incremental production from the gross production tax shall make application to the Oklahoma Corporation Commission, as provided in OAC 165:5-7-14, for a determination that such project or property qualifies, a determination of the starting date, and of the base production amount.

(A) If the application is administratively approved, an order of the Oklahoma Corporation Commission shall be issued.

(B) To obtain the tax exemption, the operator shall forward a copy of the Oklahoma Corporation Commission order to the Oklahoma Tax Commission, together with any other data required by that agency.

(2) **Tax Commission approval of exemption.** An operator desiring an exemption from the gross production tax shall make application by letter to the Audit Division, Oklahoma Tax Commission. Such application shall be accompanied by:

(A) Corporation Commission Order approving such application and containing a determination of the project beginning date, base production amount and project payback.

(B) The ratio of working interest/royalty interest in the well. Only the incremental production attributable to the working interest owners shall be exempted from the gross production tax. For purposes of this exemption, overriding royalty shall be included in working interest.

(C) A schedule of production, by month, of the gross amounts of crude oil or other liquid hydrocarbons produced, and the gross values thereof, from the project beginning date until the date application is made to the Tax Commission.

(D) OTC Form 320A, 320C, and 320U, as are necessary, to set up the OTC Production Units, to request merge numbers, and to show the entity who will remit taxes.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01]

165:10-21-78. Recovery of costs allowed as payback factors

(a) **Enhanced recovery project, project beginning date between October 17, 1987 and June 30, 1990.** For any enhanced recovery project with a project beginning date between October 17, 1987, and June 30 1990, allowed enhanced recovery costs shall include only incremental capital costs and incremental operating expenses associated with enhanced recovery operations.

(b) **Enhanced recovery project, project beginning date between July 1, 1990 and June 30, 1993.** For any enhanced recovery project with a project beginning date between July 1, 1990, and June 30, 1993, allowable enhanced recovery project costs shall be limited to the incremental capital costs of project start up, including the cost of completing any well necessary to the project and of converting any existing well to handle secondary or tertiary injection of liquids, gas or other matter. With respect to completing or converting a well, no expenditure after completion or conversion for enhanced recovery purposes shall be included.
(c) **Secondary recovery project, project beginning date on or after July 1, 1993 and before July 1, 2000.** For any secondary recovery project with a project beginning date on or after July 1, 1993, and before July 1, 2000, allowed enhanced recovery project costs shall include only incremental capital costs and fifty percent (50%) of incremental operating expenses, provided however that the period for project payback shall not exceed a period of ten (10) years from the project beginning date.
(d) **Tertiary enhanced recovery project, project beginning date on or after July 1, 1993 and before July 1, 2006.** For any tertiary enhanced recovery project with a project beginning date on or after July 1, 1993, and before July 1, 2006, allowable enhanced recovery project costs shall include only incremental capital costs and incremental operating expenses, excluding administrative expenses. The capital expenses of pipelines constructed to transport carbon dioxide to a tertiary recovery project shall not be included in determining project payback. The period for project payback shall not exceed ten (10) years from the project beginning date.
(e) **Excluded costs.** The cost of tank batteries, meters, pipelines or other external equipment shall not be included in allowable enhanced recovery project costs. Allowable costs shall be determined using generally accepted accounting principles such as outlined in the "Council of Petroleum Accountants Society (COPAS) - Accounting Procedure Form for Joint Operations" and "COPAS Bulletin No. 16", or subsequent revisions thereto.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 97000025, eff 7-1-98; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200300001, eff 7-1-03; Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-79. Responsibility for filing and payment of taxes
(a) **Responsibility for reporting; reporting; forms required.** The operator of a qualifying project will have primary responsibility for filing OTC Form 300-R-7-81, Gross Production Tax Monthly Tax Report, and for remitting gross production and petroleum excise taxes on project production controlled by the operator. Working interest owners who take-in-kind will be responsible for filing Gross production Monthly Tax Reports, unless the take-in-kind owner has made an agreement with his purchaser or the operator to report and remit on his behalf. A take-in-kind interest owner must submit, through the project operator, a Form 320, showing the disposition of his share of production. Purchasers may report taxes on project production with the approval of the Tax Commission, provided whenever there are multiple purchasers from a project, each reporting purchaser must report his allocated share of production, incremental production, and any exempt interest. All persons remitting taxes must comply with Tax Commission security requirements.
(b) **Valuation of incremental production.** When an operator or a single purchaser files the gross production tax reports and remits taxes, the incremental production will be valued at the volume-weighted average price per barrel of all crude oil or other liquid hydrocarbons produced from the project during the month. When multiple purchasers file the gross production tax reports and remit taxes, the incremental production will be valued at the volume-weighted average price per barrel purchased for the month, by each purchaser individually.
(c) **Method of computing production, base production amount and incremental production.**

(1) Frac oil recovered must be excluded as a Code 07 exemption. Frac oil will not be counted as part of the project base production amount, nor as incremental production.
(2) Incremental production will be deducted next as a Code 11 exemption.
(3) Exempt interests will be deducted next, in order of exemption code, as a decimal equivalent of the amount and value of production remaining after subtraction of the frac oil and incremental production.

(d) Well operators are advised to contact the Oklahoma Tax Commission concerning required annual reporting.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96]

165:10-21-80. Expiration of exemption for incremental production

For secondary recovery projects approved prior to July 1, 2000, and tertiary recovery projects approved prior to July 1, 2006, once the gross working revenue equals the enhanced recovery project cost, the exemption of incremental production shall end and the Oklahoma Tax Commission shall resume collection of the Gross Production Tax thereon.

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200400006, eff 7-1-04]

PART 14. PRODUCTION OF OIL, GAS OR OIL AND GAS FROM ANY WELL LOCATED WITHIN BOUNDARIES OF A THREE-DIMENSIONAL SEISMIC SHOOT

165:10-21-82. General

Exemption from the levy of gross production tax on the production of oil, gas or oil and gas from a well, drilling of which is commenced on or after July 1, 2000, and prior to July 1, 2006, located within the boundaries of a three-dimensional seismic shoot and drilled based on three-dimensional seismic technology, shall be determined according to the provisions of this Part.

[SOURCE: Added in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-82.1. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Three-dimensional seismic shoot" means any three-dimensional geophysical or seismic exploration activity conducted in the field for the purpose of drilling for and producing oil, gas or oil and gas from geological formations, intervals and/or common sources of supply.

"Three-dimensional seismic technology" means any three-dimensional geophysical or seismic equipment or instruments, data processing equipment, and/or data utilized to evaluate geological formations, intervals and/or common sources of supply in connection with a three-dimensional seismic shoot.

[SOURCE: Added in Rule Making 200000009, eff 5-11-01]

165:10-21-82.2. Qualification procedure

(a) **Applicable wells.** The provisions of this Section establish criteria for determining if an operator producing oil, gas or oil and gas from a well, drilling of which is commenced on or after July 1, 2000, and prior to July 1, 2006, located within the boundaries of a three-dimensional seismic shoot and drilled based on three-dimensional seismic technology, has met the required conditions to qualify the production from such a well for the exemption from the Gross Production Tax. [See: 68 O.S. §1001(J)]

(b) **Application to Oklahoma Corporation Commission; determination; order.** An operator seeking an exemption of the gross production tax on production from a well located within the boundaries of a three-dimensional seismic shoot and drilled based on such technology, shall make application to the Oklahoma Corporation Commission on a Form 1534 for a determination that the well qualifies for such exemption, as provided in 68 O.S. 2000 Supp. §1001(J).

(1) If the application is administratively approved, an order of the Oklahoma Corporation Commission shall be issued.

(2) To obtain the tax exemption, the operator shall forward a copy of the Oklahoma Corporation Commission order to the Oklahoma Tax Commission, together with any other data required by that agency pursuant to OAC 165:10-21-82.3.

(3) Any data, maps and other information submitted with the Form 1534 for determination that a well qualifies for the exemption provided in this paragraph shall be held as confidential information by the Conservation Division and/or Commission, and upon approval through issuance of a Commission order, shall be returned to the applicant or destroyed.

[SOURCE: Added in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200300001, eff 7-1-03; Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-82.3. Rebates - Refund procedure

(a) **Request to Oklahoma Tax Commission for a tax refund.** If the Commission grants the application, the well operator or one of the working interest owners in the well, on behalf of the well operator and the other owners of the well, shall make its request for refund by letter to the Audit Division, Oklahoma Tax Commission. Such letter request shall state the reason for refund and the amount claimed and must be accompanied by the following:

(1) Corporation Commission order approving such application and containing a determination that the well meets the criteria of the statute insofar that its drilling was commenced on or after July 1, 2000, and prior to July 1, 2006, that it is located within the boundaries of a three-dimensional seismic shoot and was drilled based on such technology, and indicating whether the seismic shoot was shot either prior to or on or after July 1, 2000.

(2) A schedule of production, by month, of the gross amounts of oil, gas or oil and gas produced, and the gross values thereof, from the date of first sale until the date application is made to the Tax Commission.

(3) OTC Form 320A, 320C, and 320U, as are necessary, to set up the OTC Production Units, to request merge numbers, and to show the entity who will remit taxes.

(4) If the refund request is filed by any person other than the party named in the Oklahoma Corporation Commission order, a notarized affidavit, signed by the party named in the order must be filed, authorizing the applicant to apply for the refund.

(b) **No time limitation on rebate for prior periods; claim limitation after July 1, 2003.** Approval of a "Three-Dimensional Incentive" for production periods prior to July 1, 2003 shall not be time-barred by either the date of certification or the date of filing a claim for refund of the rebate of gross production tax. Effective July 1, 2003, claims for rebate filed with the Oklahoma Tax Commission shall be subject to a time limitation pursuant to Title 68 O.S., Section 1001(L).

(c) **Method of appeal.** If the refund is denied, the applicant may file an appeal under the provisions of Title 68, Sections 227 and 228 of the Oklahoma Statutes.

[SOURCE: Added in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200300001, eff 7-1-03; Amended in Rule Making 200400006, eff 7-1-04]

165:10-21-82.4. Time periods for exemption from gross production tax levied on oil, gas or oil and gas production from a well located within boundaries of three-dimensional seismic shoot

The exemption from gross production tax levied on oil, gas or oil and gas production from a well qualified pursuant to this Section shall be applied as follows:

(1) **Eighteen (18) month exemption.** For a well where the seismic shoot was shot prior to July 1, 2000, the well shall be exempt from the gross production tax levied from the date of first sales for a period of eighteen (18) months.

(2) **Twenty-eight (28) month exemption.** For a well where the seismic shoot was shot on or after July 1, 2000, the well shall be exempt from the gross production tax levied from the date of first sales for a period of twenty-eight (28) months.

[SOURCE: Added in Rule Making 200000009, eff 5-11-01; Amended in Rule Making 200300001, eff 7-1-03]

PART 15. GENERAL PROVISIONS

165:10-21-85. Election of exemption

(a) **Election of exemptions generally.** Persons entitled to exemption based upon production from qualifying oil, gas, or oil and gas wells shall be entitled only to the exemption granted pursuant to:

(1) Incremental production from enhanced recovery projects, as authorized by 68 O.S. Supp. 2000 §1001(D) and Part 13 of this Subchapter; **or**,

(2) Horizontally drilled production wells, as authorized by 68 O.S. Supp. 2000 §1001(E) and Part 11 of this Subchapter; **or**,

(3) Reestablished production from inactive wells, as authorized by 68 O.S. Supp. 2000 §1001(F) and Part 7 of this Subchapter; **or**,

(4) Production enhancement projects, as authorized by 68 O.S. Supp. 2000 §1001(G) and Part 6 of this Subchapter; **or**,

(5) Production from deep wells, as authorized by 68 O.S. Supp. 2000 §1001(H) and Part 8 of this Subchapter; **or**,

(6) Production from new discovery wells, as authorized by 68 O.S. Supp. 2000 §1001(I) and Part 9 of this Subchapter; **or**,

(7) Production from wells located within the boundaries of three-dimensional seismic shoot, as authorized by 68 O.S. §1001(J) and Part 14 of this Subchapter.

(b) **Special provision.** Expiration of an exemption available for production from a qualifying well pursuant to one of Subsections (a)(2) through (a)(6) of this Section does not prohibit any person from qualifying for the exemption provided for in Subsection (a)(1).

[SOURCE: Added at 13 Ok Reg 2933, eff 7-11-96; Amended in Rule Making 200000009, eff 5-11-01]

PART 17. SALES TAX EXEMPTION FOR ELECTRICITY AND ASSOCIATED DELIVERY AND TRANSMISSION SERVICES SOLD FOR OPERATION OF RESERVOIR DEWATERING PROJECT AND/OR UNIT

165:10-21-90. General

(a) **Scope.** This Part deals with the classification by the Oklahoma Corporation Commission (Corporation Commission or Commission) of a reservoir dewatering project and/or unit for the purpose of an exemption, beginning January 1, 2004, from sales taxes levied on electricity and associated delivery and transmission services sold to an oil and gas operator for reservoir dewatering projects and associated operations commencing on or after July 1, 2003, as provided in 68

O.S. 2002 Supp., §1357(28).

(b) **Distinction from designation as reservoir dewatering oil spacing unit or other spacing application.** The classification of an area and reservoir(s) as a "reservoir dewatering project" and/or a "reservoir dewatering unit" pursuant to this Part shall be separate and distinct from the designation of a reservoir dewatering oil spacing unit for oil allowable purposes pursuant to OAC 165:10-15-18. Corporation Commission approval of an area and reservoir(s) for the instant sales tax exemption shall be made by application under this Part and not as a result of a spacing application filed for oil allowable purposes under OAC 165:10-15-1 and OAC 165:10-15-18, a spacing application filed for gas allowable purposes under OAC 165:10-17-2 through 10-17-16, a spacing application filed for horizontal drilling purposes under OAC 165:10-3-28, or any spacing application filed under OAC 165:10-1-22.

(c) **Reservoir Dewatering Projects for Oil Production.** Any reservoir that is the subject of an application pursuant to this Part, which produces predominantly oil, shall be evaluated to determine the initial water-to-oil ratio is equal to or greater than five-to-one (5-to-1).

(d) **Reservoir Dewatering Projects for Gas Production.** Any reservoir that is the subject of an application pursuant to this Part, which produces predominantly gas, shall be evaluated to determine the initial five-to-one (5-to-1) water-to-oil ratio using a gas conversion factor of one (1) barrel of oil converted to an MCF of natural gas based on an initial natural gas formation volume factor, BTU or price calculation or conversion accepted by the Conservation Division.

[**SOURCE:** Added in Rule Making 200300001, eff 7-1-03]

165:10-21-91. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Reservoir dewatering project" means an oil or gas production project covering a specified area and reservoir(s), which utilizes water recovery and disposal technology to increase water production in the initial phase of reservoir development, with the primary purpose of increasing oil or gas production from the reservoir(s) as a result of the dewatering process. For the purpose of qualification for the sales tax exemption pursuant to this Part, the definition of reservoir dewatering project shall require the proof that the reservoir's initial water-to-oil ratio is greater than or equal to five-to-one (5-to-1), or is greater than or equal to the appropriate gas-to-water ratio calculated using the gas conversion factor outlined in OAC 165:10-21-90(d). This definition shall not include enhanced recovery projects or secondary recovery properties, which are subject to gross production tax exemptions pursuant to 68 O.S. Section 1001 and Part 13 of this Subchapter, OAC 165:10-21-75 through 10-21-80.

"Reservoir dewatering unit" means an area and reservoir(s) designated a reservoir dewatering project where a reservoir dewatering process is conducted as defined in this Part.

[**SOURCE:** Added in Rule Making 200300001, eff 7-1-03]

165:10-21-92. Qualification procedure

(a) **Applicable operations.** The provisions of this Section establish criteria for determining if an area and reservoir(s) can be classified a reservoir dewatering project and/or a reservoir dewatering unit, beginning January 1, 2004, for the purpose of an exemption from sales taxes levied on electricity and associated delivery and transmission services sold to an oil and gas operator for a reservoir dewatering project and associated operations commencing on or after July 1, 2003.

(b) **Application to the Oklahoma Corporation Commission.** An oil and gas operator seeking the classification of an area and reservoir(s) as a reservoir dewatering project and/or reservoir dewatering unit pursuant to this Part shall file an application with the Corporation Commission on a Form 1535 for a determination that the project and/or unit qualifies for the exemption, as provided in 68 O.S. 2002 Supp., §1357(28). The operator shall attach to the Form 1535 a copy of the following information:

(1) A production test or other appropriate data showing the initial water-to-oil ratio is greater than or equal to five-to-one (5-to-1) or is greater than or equal to the appropriate gas-to-water ratio calculated using the gas conversion factor outlined in OAC 165:10-21-90(d). For this purpose, a Corporation Commission Form 1013 may be filed with the sales tax exemption application to demonstrate the initial 5-to-1 water-to-oil ratio for the reservoir.

(2) Geological structure and isopach maps for the applicable reservoir showing its geological characteristics; and any additional engineering and geological data or information deemed necessary by the Conservation Division to evaluate the application.

(3) A schematic diagram of the electrical grid and dewatering and water disposal equipment associated with the reservoir dewatering project covered by the application.

(c) **Administrative approval, determination and order.**

(1) If the application is administratively approved, an order of the Oklahoma Corporation Commission shall be issued.

(2) To obtain the tax exemption, the operator should contact the Director's Office, Taxpayer Assistance Division, Oklahoma Tax Commission, 2501 N. Lincoln Blvd., Oklahoma City, Ok. 73194.

(3) Any data, maps and other information submitted with the Form 1535 for determination that an area and reservoir qualify for the exemption provided in this Part shall be held as confidential information by the Conservation Division and/or Corporation Commission, and upon approval through issuance of a Commission order, shall be returned to the applicant or destroyed.

SUBCHAPTER 24. MARKET SHARING

Section

[**Authority**: 52 O.S. 1992, Section 581.1 et seq.]

[**Source**: Codified 6-25-93]

[BLANK PAGE]

165:10-24-1. Scope
(a) This Subchapter implements the Natural Gas Market Sharing Act of 1992, codified at 52 O.S. Section 581, et seq.
(b) This Subchapter establishes a procedure whereby an owner in a well may compel the well operator or other designated marketer to either sell gas on the owner's behalf or find a market for that owner's gas.
(c) This Subchapter shall apply to the sale of natural gas from a well except for:
(1) any sale under a gas contract for more than one year, entered into before January 1, 1985 (including any successor, replacement or roll-over contract entered into before January 1, 1990) provided that any participating mineral owners who were sharing in a contract on January 1, 1992, and continue to share in such a contract on September 1, 1992, are subject to this Subchapter;
(2) any sale under a contract which provides for:
(A) an initial term of more than three years; and
(B) a guarantee or warranty of delivery of fixed volumes without limitation on specified wells or reserves; and
(C) delivery of such volumes;
(3) any sale of natural gas liquids extracted by mechanical processing of the natural gas stream for removal of liquid components other than methane.
(d) Nothing in this Subchapter shall change the obligation of a first purchaser of production under an existing gas contract unless otherwise agreed to by the parties.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93; Amended at 11 Ok Reg 3699, eff 7-11-94]

165:10-24-2. Definitions
The following words or terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:
"Designated marketer" means the operator of the well or a producing owner substituted for the operator as provided in 165:10-24-5.
"Electing owner" means any owner who elects to produce and market its share of production pursuant to the provisions of this Subchapter.
"Nonexempt sales" means those gas sales which are subject to the provisions of this Subchapter and do not qualify for exemptions as set forth in 165:10-24-1(c) and 165:10-24-3(b).
"Overproduced owner" means an owner who has produced and sold a volume of gas in excess of his working interest percentage of cumulative sales from a well.
"Owner" means a person or persons who own a working interest in a well.
"Producing owner" means an owner who produces and sells gas from a well for its own account.
"Working interest" means the interest in a well, calculated prior to deduction for royalty, overriding royalty and other non-cost bearing interests burdening production, entitling the owner thereof to drill for and produce oil and gas, including the interest of a participating mineral owner to the extent set forth in Section 87.1 of Title 52 of the Oklahoma Statutes.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-24-3. Election to market share
(a) An owner eligible to market share as to a particular well, may elect to market share as to such well by sending written notice to the designated marketer for the well.
(b) An owner may not elect to market share as to a particular well if as to such well:

(1) said owner is subject to a balancing agreement (or other written agreement expressly providing for gas balancing or the taking, sharing, marketing of gas); or
(2) the term has yet to expire for a gas contract, where the owner terminated the contract for value received; or
(3) said owner terminated market sharing within the previous 12 months; or
(4) said owner is currently over-produced; or
(5) the designated marketer is relieved from the duty to market share pursuant to 165:10-24-4(g) or 165:10-24-4(i) and (j).

(c) An election to market share shall be effective on the first day of the month following 60 days from receipt of the election by the designated marketer.
(d) The well operator shall serve as the designated marketer until appointment of a substitute.
(e) An owner may terminate his election by sending writing notice to the designated marketer. Notice of termination is effective on the first day of the month following 60 days after receipt of the notice.
(f) Copies of all market sharing elections and notices shall be sent to the well operator, if said operator is not the designated marketer.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-24-4. Duties and accounting

(a) The designated marketer shall find an independent, non-affiliated purchaser for the electing owner's gas, or the designated marketer shall produce and sell said gas for the account of the electing owner.
(b) During market sharing, the designated marketer shall have the right to produce and sell and electing owner's gas, without further notice and consent except in those cases where the designated marketer has secured an independent non-affiliated purchaser for the gas production of such electing owner.
(c) If the designated marketer produces and sells the electing owner's gas for the account of the electing owner, the designated marketer shall account to the electing owner at the average price, weighted by volume, received by the marketer for all of the designated marketer's non-exempt sales from the well for that month, less post production cost and expenses required to render the gas marketable and to sell and deliver the gas to market, and net of all reasonable marketing costs, expenses and administrative fees. Volumetric allocation between the designated marketer and the electing owner shall be in proportion to their working interests in the well, with one exception. If the owner's proportionate production interest is different from his working interest, the proportionate production interest shall be used.
(d) Disbursement of gas sales proceeds shall be subject to the Production Revenue Standards Act of 1992 (52 O.S. Section 570.1, et seq.).
(e) The designated marketer shall not be considered as a fiduciary to any electing owner or to any owner with an interest burdening the electing owner's interest. The designated marketer shall not be liable for losses absent bad faith, gross negligence or willful misconduct.
(f) Market sharing according to this Subchapter shall not confer any contract rights to an electing owner or his assigns, either directly or as third party beneficiaries.
(g) For a gas contract with a term in excess of one year, the designated marketer may require an electing owner to either agree in writing to be bound by the contract terms or forego market sharing under that contract. Absent a confidentiality provision in said gas contract, the designated marketer shall send a copy of the gas contract to each electing owner.
(1) After receipt of the contract, the electing owner shall have 30 days in which to:
(A) send written consent to the contract terms, or
(B) provide a written termination of market sharing or
(C) elect a new designated marketer.
(2) If the electing owner fails to so respond, his election to market share shall be deemed terminated.

(h) If the designated marketer ceases to sell gas from the well and therefore has no sales, the designated marketer:

(1) may:

(A) notify the electing owners in writing that it has no sales and that the electing owners must elect a new designated marketer, or

(B) locate a non-affiliated purchaser for the electing owners.

(2) shall not be responsible for sharing sales with electing owners as it has no sales. If such a designated marketer again begins to produce and market gas from the well, then the electing owners may re-elect it as designated marketer.

(i) If the designated marketer provides the electing owner with a sales contract with a gas purchaser, the designated marketer shall be relieved of the duty to market share with the electing owner to the extent that the terms of said contract provide for the purchase of the electing owner's share of each withdrawal from the well during the contract period, provided:

(1) The designated marketer is not an affiliate of the gas purchaser: said term "affiliate" being defined at 18 O.S. Section 1148A(2); and

(2) The contract is of a type and with terms generally offered at the time to other producers for gas production from wells in the common source of supply; and

(3) If the designated marketer operates and controls a gathering line to the well, it does not prohibit access to downstream transportation or impose unjust or discriminatory gathering fees or tariffs upon the electing owner; and

(4) Before discontinuing market sharing if it had begun, the designated marketer provides the electing owner with at least thirty days in which to accept or reject the offer for said contract.

(j) In so far as the exemption established by subsection (i) of this Section, if the designated marketer fulfills each of the foregoing conditions, it shall be relieved from the duty to market share with the electing owner for a time period hereafter described as the "exemption period", calculated as follows:

(1) If the electing owner enters into said contract with said purchaser, then the exemption period shall be the duration of the contract as originally offered to the electing owner or the duration of the contract as entered into by the electing owner, whichever is greater;

(2) If the electing owner fails to enter into said contract for any reason, then the exemption period shall be the duration of the contract period as initially offered to the electing owner or twelve months, whichever is less.

(k) During the exemption period as determined in subsection (j) of this Section, failure to enter into said contract shall not be grounds for election or appointment of an additional designated marketer to market share with the electing owner with respect to volumes of gas which would have been purchased if the electing owner had entered into the said contract as initially offered to the electing owner.

(l) Upon request, the designated marketer or electing owner shall provide the first purchaser of production with information concerning the election to market share and the electing owner's share of monthly production.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-24-5. Replacement of the designated marketer

A new designated marketer may be appointed by a majority vote of the remaining market sharing owners. If an electing owner does not agree to the terms of a gas contract with a term greater than one year, the electing owner may elect a new designated marketer unless said election is prohibited by 165:10-24-4(i) and (j). Otherwise, substitution of the designated marketer shall occur not more than once every twelve months.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-24-6. Fees

(a) The designated marketer may charge each electing owner with an administrative fee for marketing the electing owner's share of production. Said fee shall be assessed monthly on a per-well basis. It shall be based on a formula described in this Section subject to annual adjustments as provided below. Said formula consists of 2.5% of the electing owner's monthly share of proceeds, but not less than twenty dollars nor more than seventy-five dollars, unless application of the annual adjustment factor provides a different maximum amount. The maximum amount of the fee permitted by this Section shall be adjusted as of the first day of May each year following May 1, 1993. The annual adjustment shall be computed by multiplying the rate currently in use by the percentage of increase or decrease in the annual overhead adjustment factor established by the Council of Petroleum Accountants Societies at its annual spring meeting for purposes of adjusting the combined fixed-rate overhead charges against joint operations in a well.

(b) If the designated marketer produces and sells gas for the account of the electing owner, the designated marketer may charge the electing owner or deduct said fee from the electing owner's share of the undistributed proceeds of production.

(c) Administrative fees under this Section shall be in addition to and separate from any and all post-production costs and expenses, including but not limited to reasonable marketing costs and expenses which may also be deducted from the proceeds payable to eligible electing owners.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

SUBCHAPTER 25. ESCROWED ACCOUNTS FOR POOLED MONIES

Section

[BLANK PAGE]

165:10-25-1. Definitions

The following words or terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Escrow account" means an account established in a financial institution and held in the name of the holder and an escrow agent wherein each owner is federally insured to One Hundred Thousand Dollars ($100,000.00).

"Financial institution" means a federally or state chartered bank, savings and loan, or credit union.

"Holder" means any person in possession of royalties, bonus payments, or other monies directed to be paid under a Commission pooling order and which cannot be paid because the persons entitled thereto are unknown or cannot be located.

"Owner" means the last known record titleholder of a mineral interest which is subject to a Commission pooling order.

"Person" means any individual, partnership, joint stock associations, trust, cooperative, unincorporated association, or corporation.

165:10-25-2. Escrow account required

(a) Each pooling order which pools interest of unknown or unlocated owners shall contain language substantially similar to the following: "If any payment of bonus, royalty payments, or other payments due and owing under this order cannot be made because the person entitled thereto cannot be located or is unknown, then said bonus, royalty payments or other payments shall be paid into an escrow account in a financial institution within ninety (90) days after this order and shall not be commingled with any funds of the applicant or operator. Provided however, that the Commission shall retain jurisdiction to grant to financially solid and stable holders an exception to the requirement that such funds be paid into an escrow account with a financial institution and permit such holder to escrow such funds within such holder's organization. Responsibility for filing reports with the Commission as required by law and Commission rule as to bonus, royalty or other payments escrowed hereunder shall be with the applicable holder. Such escrowed funds shall be held for the exclusive use of, and the sole benefit of, the person entitled thereto. It shall be the responsibility of the operator to notify all other holders of this provision and of the Commission rules regarding unclaimed monies under pooling orders".

(b) Each pooling order issuing upon an application filed on or after July 1, 1984, shall contain, in addition to the foregoing language, an attached exhibit listing all parties or interests which are unknown or cannot be located, together with each party's last known address, if available.

165:10-25-3. Escrow account requirements

(a) Monies which are directed to be paid under a Commission pooling order and which cannot be paid because the persons entitled thereto are unknown or cannot be located shall be placed into escrow accounts in a financial institution. The holder shall choose the institution. The holder and the financial institution may make such arrangements as are necessary and appropriate for the establishment of the account. Service charges, fees, and costs may be deducted from any interest generated by the monies but in no event shall such charges, fees, and costs be deducted from the principal. Any financially solid and stable holder may apply to the Commission for an exception to the requirement to place monies into escrow accounts in a financial institution. The granting of an exception shall be within the sole discretion of the Commission and may only be granted upon the filing of a proper application therefor pursuant to notice given to the Manager of the Mineral Owners Escrow Account by mail at least ten days prior to the hearing and by publication one time at least 15 days prior to the hearing in a newspaper of general circulation in Oklahoma County and in a newspaper of general circulation in the county where the holder's principal

office in the state is located. The granting of an exception shall not exempt the holder from any other requirements set forth in this Subchapter.
(b) Only one account need be established by each holder. If only one account is established, a record shall be make of deposits and withdrawals for each person for whom monies are being held. Either the holder or the financial institution may keep the deposit/withdrawal record.
(c) An application for an exception under (a) of this Section shall state that the holder has proof by the holder's annual financial statement that it is a solid and stable holder. The holder must introduce its annual financial statement into evidence in the cause and the order, if one is issued, shall show that the annual financial statement was in fact introduced into evidence and considered by the Administrative Law Judge in making the determination to grant holder's request for an exemption under (a) of this Section, and holder shall submit a current financial statement on an annual basis thereafter.
(d) Withdrawals from such escrow account by the holder may only be made for the following purposes:
(1) To pay the rightful recipient of the monies upon presentation of a proper claim.
(2) To submit and pay to the Commission the principal of all monies placed in escrow pursuant to 165:10-25-6.
(3) To correct an overpayment or other mistake made in the distribution of monies by the holder.

[**SOURCE:** Amended at 9 Ok Reg 2337, eff 6-25-92]

165:10-25-4. Payment to owner

The holder shall have a designated officer or employee to whom claims upon the escrow account may be made. The holder shall promptly pay the appropriate sum to any person showing the holder sufficient proof of ownership and proof of identity as may be determined in good faith by the holder. The holder shall report any payments made on his annual report to the Commission.

165:10-25-5. Reports to the Commission

Each holder shall submit a report for persons who cannot be located or are unknown and for whom monies are being held in escrow no later than 30 days after such holder's annual reporting date. Each holder's initial report shall be filed no later than one year and 30 days after the date of the issuance of the first pooling order subject to this Subchapter. Such reports shall be filed each year that any monies are held in escrow, until the well is plugged.

165:10-25-6. Payment to the Commission

(a) No later than 30 days after the annual reporting date of each year, the holder shall submit to the Commission the principal of all monies placed in escrow accruing under the orders issued during the first year, and all subsequent years where the sum exceeds $100.00 for any one person.
(b) If the holder has placed in escrow less than $100.00 for any one person, the holder may follow the procedures for deposit, or maintain the funds in escrow. If the amount accumulates to over $100.00 for any one person after any annual reporting date, it shall be submitted to the Commission on the next annual reporting date.
(c) Payments shall be tendered to the Finance Office of the Commission. Payments shall be made by cashier's check, certified check, or money order made payable to the "Oklahoma Corporation Commission".

165:10-25-7. Affidavit of compliance

In addition to the Plugging Record (Form 1003) and Completion Report (Form 1002A) required under 165:10-11-7, the operator shall file a compliance affidavit. No plugging bond shall be released until after the compliance affidavit is filed.

165:10-25-8. Forms

The Commission may issue appropriate forms to implement the provisions of this Subchapter.

165:10-25-9. Release from liability

Any holder who pays or delivers monies to the Commission required to be paid under this Subchapter shall be relieved of all liability for the monies so paid or delivered for any claim which then exists or thereafter may arise or be made in respect to such monies.

165:10-25-10. Construction

This Subchapter shall not be construed as limiting the Commission's authority to grant an exception to any rule in this Subchapter, unless precluded by law.

[BLANK PAGE]

SUBCHAPTER 27. PRODUCTION REVENUE STANDARDS

Section

[**Authority:** 52 O.S. 1992, Section 570.13 et seq.]

[**Source:** Codified 6-25-93]

[BLANK PAGE]

165:10-27-1. Scope

This Subchapter implements the Production Revenue Standards Act of 1992, codified at 52 O.S. Section 570.1, et seq. It shall apply to all producing wells as set forth in the Production Revenue Standards Act of 1992. However, Sections 165:10-27-4 through 165:10-27-10 shall not apply to any well which is a part of a compulsory enhanced recovery project, or where royalty remittance is otherwise regulated by written agreement among all owners in the well. This Subchapter is intended to supplement and clarify as needed the language in the statutes.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-27-2. Effective date [Revoked]

[**Source:** Added at 10 OK Reg 2601, eff 6-25-93; Revoked at 11 Ok Reg 3699, eff 7-11-94]

165:10-27-3. Definitions

The following words or terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

"Owner" means a person or governmental entity with a legal interest in the mineral acreage under a well which entitles that person or entity to oil or gas production or the proceeds or revenues therefrom.

"Produce", **"producing"** and **"production"** mean the physical act of severance of oil and gas from a well by an owner and includes but is not limited to the sale or other disposition thereof.

"Producing owner" means an owner entitled to produce who during a given month produces oil or gas for its own account or the account of subsequently created interests as they burden its interest.

"Proportionate production interest" means that interest in production which a working interest owner is entitled to produce in order to adjust for shifting of royalty burdens among working interest owners under the royalty provisions of 52 O.S. Sections 570.1, et seq., and is equal to the quotient of:

(A) the sum of a working interest owner's net revenue interest plus the net revenue interests of any subsequently created interests as they burden such owner's working interest,

(B) divided by the remainder of one (1) less the royalty share.

"Proportionate royalty share" means the percentage of the royalty share owned by a royalty interest owner calculated by dividing such owner's royalty interest in a well by the royalty share.

"Royalty interest" means the entirety of the percentage interest in production or proceeds therefrom:

(A) reserved or granted by a mineral interest owner exclusive of any interest defined as a working interest or a subsequently created interest, or

(B) otherwise provided or ascribed to a mineral interest owner by statute, rule, order or operation of law.

"Royalty interest in a well" means an owner's royalty interest multiplied by the quotient of:

(A) the gross mineral acres under the well attributable to such interest, divided by

(B) the total mineral acres under the well.

"Royalty proceeds" means the share of proceeds or other revenue derived from or attributable to any production of oil and gas attributable to the royalty share, but shall not include payments of bonus, delay rentals, shut-in royalties or any additional royalty payable to the Commissioners of the Land Office or other governmental entity, pursuant to and valued according to the terms of its oil and gas lease, which is calculated separately from the royalty portion of actual proceeds from the sale of oil or gas.

"Royalty share" means the percentage of the well equal to the sum of all royalty interests in the well.

"Share of production" means the monthly entitlement to produce belonging to a producing owner.

"Shipper" means any entity who contracts with a transporter to move gas through the transporter's system.

"Subsequently created interest" means any interest carved from a working interest other than a royalty interest. In addition to the royalty interest contained in a lease, a non-participatory interest created by a working interest owner for the benefit of a mineral interest owner in excess of a one-eighth (1/8) royalty interest may, by separate agreement other than the oil and gas lease, be a subsequently created interest and thereby not be communitized under the terms of the Production Revenue Standards Act only if there is clear and unambiguous language expressing that intent in the creating document. The additional royalty payable to the Commissioners of the Land Office or other governmental entity pursuant to and valued according to the terms of its oil and gas lease, which is calculated separately from the sale of oil or gas, shall also be a subsequently created interest and thereby shall not be communitized under 52 O.S. Section 570.1, et seq.

"Well" means an oil or gas well, and shall include:

(A) a well having uniform ownership as to all producing zones, or

(B) a drilling and spacing unit having uniform ownership wherein multiple wells producing gas are commonly metered, and

(C) each separately metered producing zone within a single wellbore wherein ownership varies by zone.

"Working interest" means the interest in a well entitling the owner thereof to drill for an produce oil and gas, including but not limited to the interest of a participating mineral owner to the extent set forth in Section 87.1 of Title 52 of the Oklahoma Statutes.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93; Amended at 11 Ok Reg 3699, eff 7-11-94]

165:10-27-4. Well operator records

Each well operator shall establish or cause to be established records showing the production allocations and payments to each interest owner in the well. For purposes of such records, the working interest owners shall provide the well operator with accounting and remittance information as required by statute. At a minimum, the required information shall consist of the name, address, interest amount and tax identification number of each royalty owner along with payment status. Each working interest owner shall provide said information in writing within 60 days of receipt of a written information request from the well operator. Updated information shall be provided by a working interest owner within 60 days after receipt of notice of a change.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93; Amended at 11 Ok Reg 3699, eff 7-11-94]

165:10-27-5. Pre-sale nominations

(a) Any producing owner marketing production separately from the well operator shall send pre-production nominations to the well operator for his withdrawals. A nomination shall be due five business days prior to the month in which the nomination is to be effective, but earlier if required by the first purchaser or transporter. The nomination shall consist of the name of the first purchaser or shipper, shipper contract number and the volumes of gas nominated for production for such producing owner's account.

(b) Nothing in this Section shall supersede or limit the operator's right to control gas nominations and allocations under a joint operating agreement, separate balancing agreement or Commission order.

(c) The owner of the gas meter shall confirm all nominations with the operator of the well no later than the last business day prior to the month in which production occurs.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93; Amended at 11 Ok Reg 3699, eff 7-11-94]

165:10-27-6. Entitlement

Each producing owner in a well shall be entitled to produce each month his proportionate production interest subject to balancing restrictions created by statute, rule, agreement or operation of law.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-27-7. Post-sale reports

(a) Within sixty days after the end of the month of production, each producing owner shall report and account to the operator of the well, the identity of the first purchaser or shipper of the gas and information specified in 165:10-27-13.
(b) Within fifteen days after the end of the month of production, each owner of a gas meter taking gas solely from a gathering system shall provide upon first request by the owner of such gathering system and thereafter, the gross volume of gas measured by such meter both in MCF and British Thermal Unit equivalent.
(c) Within twenty days after the end of the month of production, each owner of a gas meter shall provide or cause to be provided in writing to the operator of the well, the gross volume of gas measured by such meter, both in MCF and British Thermal Unit equivalent, and the volume of gas allocated at the meter to each first purchaser or shipper and each contracted producing owner that sold gas to the owner of the gas meter. Each meter owner shall, within the same time period, furnish each first purchaser or shipper the volume of gas allocated at the meter to that first purchaser or shipper. However, if the gas processing plant operator is performing the allocations, then within ten days after the end of the month of production, the owner of the pipeline residue gas meter shall provide, upon first request by the processing plant operator and thereafter, the volume in MCF and British Thermal Unit equivalent measured through its meter as required by the gas processing plant operator for its allocations under this subsection.
(d) As an alternative to supplying the operator with information in the manner prescribed by subsections (b) and (c) of this Section, the owner of a gas meter who has a contract with one or more producing owners, covering all of the gas flowing through its meter, may furnish monthly volume statements to the operator of the well, provided said owner of the gas meter has previously furnished the operator with names of the producing owners and the decimal interest owned by each such producing owner or owners or any method other than by decimal interest then in effect for allocating gas among the producing owners. After adopting alternative reporting under this subsection, the owner of the gas meter shall be required to supply the operator of the well with any change to the name of a producing owner, the decimal interest by a producing owner or the method, other than by decimal interest, for allocating gas among the producing owners: such change to reported by the owner of the gas meter to the operator of the well within thirty days after the owner of the gas meter receives notice of such change.
(e) Within thirty-five days after the end of the month of production, each first purchaser or shipper of gas from a gas meter shall furnish or cause to be furnished to the operator of the well, a volume allocation statement showing the volume of gas purchased from or shipper for each contracted producing owner. Within thirty days after making any retroactive gas volume adjustment for such well, the first purchaser or shipper shall furnish notice of such retroactive gas volume adjustment to the operator of the well.
(f) Any person subject to multiple reporting requirements under this Section shall not be required to re-report the same information to the operator if such

information has been previously provided by such person in a different report. Such person may consolidate the required information into a single report to the operator; provided, however, that all such reporting must comply with the applicable statutory time periods for the type of information being communicated to the operator.
(g) Any first purchaser, shipper or owner of a gas meter that does not provide the information required of it by this Section shall be subject to having its takes from the well suspended by the operator of the well pursuant to 165:10-27-8.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93; Amended at 11 Ok Reg 3699, 7-11-94]

165:10-27-8. Operator's option to confirm zero volume of gas sales because of noncompliance
(a) If a producing owner fails to timely provide the operator of the well with any of the information required by 165:10-27-4 and 165:10-27-7, or if the owner of a gas meter, first purchaser or shipper of gas fails to timely provide the operator of the well with any of the information required of it by 165:10-27-7 for the transfer, transportation, delivery or sale of gas by a producing owner, the operator of the well shall have the right, but not the obligation, to confirm zero volume of gas sales for such producing owner, and to make available for nomination and sale to other producing owners in the well, then in compliance with said Sections, all of such producing owner's share of production for the next subsequent calendar month and for each and every month thereafter of noncompliance. If the operator elects to make such producing owner's share of production available for nomination and sale, the operator shall immediately notify such producing owner by certified mail and inform such producing owner that such producing owner shall no longer have the right to nominate any volume of gas, until the next production month following the date of compliance, unless the operator of the well agrees to an earlier date. Such notice shall contain the lease or well identification, legal description, production months of noncompliance, a brief description of the noncompliance, and a provision stating that the operator is confirming zero volume of gas sales for such producing owner. The operator shall than immediately notify each producing owner then in compliance with the aforesaid Sections and inform said producing owner about additional gas volumes available for nomination and sale. In regard to the producing owner for which the operator has confirmed zero gas sales, the operator shall also immediately notify in writing such producing owner's first purchaser or shipper, and the owner of the gas meter, and such notice shall report that such producing owner does not have the right to nominate and sell or transport any volume of gas, until the next production month following compliance, unless the operator of the well agrees to an earlier date. Such notice shall also contain the lease or well identification, legal description, a brief description of the noncompliance, and the production months of noncompliance.
(b) As soon as a noncomplying party is in compliance, but no sooner than the next production month unless otherwise agreed to, the operator of the well shall give the affected producing owner the opportunity to nominate and sell gas subject to existing agreements or by common practice within the oil and gas industry.
(c) The first purchaser or shipper and the owner of the gas meter shall be entitled to rely on and shall incorporate on a prospective basis any nomination or allocation changes pursuant to such notification from the operator under this Section. Changes pursuant to such notification may be made on a retroactive basis if so agreed to by the operator, owner of the meter, the first purchaser or shipper.
(d) The remedies provided for in this Section shall not preclude any party from pursuing the remedies available to it through the district courts, as provided by existing law, including the right of offset.
(e) All elections and notices given pursuant to the provisions of this Subchapter shall become effective as of the first day of the month following the

end of any time period specified in the Production Revenue Standards Act as last amended, 52 O.S. Section 570.1, et seq.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93; Amended at 11 Ok Reg 3699, eff 7-11-94]

165:10-27-9. Designated payor for royalty distributions

(a) For royalty distributions, the well operator shall serve as payor for all proceeds of production, absent appointment of a substitute payor and/or election of a working interest owner to distribute royalties attributable to that working interest owner's sales.

(b) A substitute payor may be appointed by Commission order or by the owners owning a majority in interest of the working interest in the well. A substitute payor so appointed shall assume the rights and duties of the well operator concerning assessment of fees, royalty record maintenance and disbursement of royalties. A surety bond of $50,000 shall be required if the substitute payor is not a working interest owner, a first purchaser of production from the well, a bank or a trust company. Such bond shall be posted with the Surety Department of the Conservation Division before receipt of sales proceeds by the substitute payor. Any such bond shall be drafted so as to compensate royalty owners if the substitute payor defaults on his disbursement obligation.

(c) A producing owner may elect to distribute royalties from his sales subject to the following conditions:

(1) the producing owner shall provide 60 days written notice to the operator before starting or stopping the alternative procedure;

(2) the producing owner shall assume liability for its errors;

(3) the producing owner shall report payment information to the well operator within 30 days after each disbursement;

(4) the producing owner cannot re-start the alternative procedure within 12 months after terminating it.

(d) For good cause shown, the Commission may cancel a producing owner's election to separately distribute royalty. Cancellation shall occur only by order after application, notice and hearing.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-27-10. Administrative fees

(a) This Section prescribes fees which may be charged by the operator of a gas producing well or substitute payor, for administrative expenses generated by the Production Revenue Standards Act.

(b) Fees shall be assessed on a per-well basis against the cost-bearing working interests in a well according to respective gross working interest. They shall not be assessed against either royalty interests or non-cost bearing working interests in the well.

(c) A one-time implementation fee shall cover any cost associated with establishing or modifying the well operator's record keeping for the well, and it shall apply to any existing gas producing well with a date of first production occurring before September 1, 1992. If operations are transferred to a different operator after assessment of the one-time implementation fee, the successor operator may not assess another implementation fee against the working interests in the well.

(d) Should any working interest owner in a well producing gas fail to fully and timely comply with the requirements of 165:10-27-4, the well operator or substitute payor shall have the right to charge against said non-complying working interest owner a late fee of two hundred-fifty dollars per affected well.

(e) An annual maintenance fee shall cover any cost associated with record keeping, issuance of gas balancing statements and any election of a producing owner regarding separate distribution of royalty proceeds. Maintenance fees shall be calculated on an annual basis using the first day of May as the

anniversary date. Such fees may be prorated and billed on a monthly basis at the well operator's discretion. If a well has a date of first production after the first day of May of the calendar year, the annual maintenance fee shall be prorated based on the remaining number of months before the next anniversary date on the first day of May.
(f) No working interest owner other than the well operator shall be entitled to assess either an implementation fee or a maintenance fee.
(g) The rates for implementation fees and annual maintenance fees shall be based on the appropriate table values found in Appendix G to this Chapter, subject to annual adjustments as provided below. The appropriate table value shall be determined from a matrix using the number of working interest owners or royalty owners in a well. The table value shall be adjusted as of the first day of May each year following May 1, 1993. The annual adjustment shall be computed by multiplying the rate currently in use by the percentage of increase or decrease in the annual overhead adjustment factor established by the Council of Petroleum Accountants Societies at its annual spring meeting for purposes of adjusting the combined fixed-rate overhead charges against joint operations in a well.
(h) Any fee assessed under this Section may be billed or deducted from the working interest owner's share of undistributed proceeds of production.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-27-11. Balancing of royalty accounts
(a) In the event of a production imbalance among royalty owners in a well, the affected working interest owners may adopt a royalty payment method to balance the royalty accounts, provided it is used only to extent necessary to balance the cumulative accounts of the royalty owners, and prior notice of the plan is sent to the affected royalty owners and to the well operator along with any ongoing information necessary for said operator to discharge its duties.
(b) Nothing in this Section shall impair any balancing rights arising by contract or law.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-27-12. Record keeping
Any record required by this Subchapter shall be maintained for a period of at least five years. Upon reasonable request, the well operator or substitute payor shall make available to a royalty owner for confidential inspection a record of receipts and payment of proceeds to said royalty owner, as well as copies of information furnished to the well operator pursuant to the Production Revenue Standards Act.

[**Source:** Added at 10 Ok Reg 2601, eff 6-25-93]

165:10-27-13. Check stub information
(a) With each royalty payment, the following information shall be provided:
(1) lease or well identification;
(2) month and year of sales included in the payment;
(3) total barrels or MCF attributed to such payment;
(4) price per barrel or MCF, including British Thermal Unit adjustment of gas sold;
(5) gross production and severance taxes attributable to said interest;
(6 net value of total sales attributed to such payment after deduction of gross production and severance taxes;
(7) owner's interest in the well expressed as a decimal;
(8) owner's share of the total value of sales attributed to such payment before any deductions;

(9) owner's share of the sales value attributed to such payment less owner's share of the production and severance taxes.

(b) Upon payee's request, the payor shall provide a list of any other deduction from such payment.

(c) All revenue decimals shall be calculated to at least six decimal places.

(d) Gas volumes shall be measured according to 52 O.S. Section 474.

***** Allowables currently are established at 200 percent of market demand. To determine the allowable for any well, the number in the appropriate column of the chart in the appendix must be doubled (multiplied by 2). The minimum allocated well is therefore 60 BOPD (from the 10 acre column, depth to 3,000 feet, 30 BOPD times 2) (Market Demand).

****** The average producing depth of the pool is assumed to be the depth in feet from the surface of the ground to the top of pay in the discovery well in that pool.

Appendix E – Texas Regulatory Summary (General)

<<Prev Rule Next Rule>>

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.1	**Organization Report; Retention of Records; Notice Requirements**

(a) Filing requirements.

(1) Except as provided under subsection (d) of this section, no organization, including any person, firm, partnership, joint stock association, corporation, or other organization, domestic or foreign, operating wholly or partially within this state, acting as principal or agent for another, for the purpose of performing operations within the jurisdiction of the commission shall perform such operations without having on file with the commission an approved organization report and financial security as required by Texas Natural Resources Code §§91.103-91.1091. Operations within the jurisdiction of the commission include, but are not limited to, the following:

(A) drilling, operating, or producing any oil, gas, geothermal resource, brine mining injection, fluid injection, or oil and gas waste disposal well;

(B) transporting, reclaiming, treating, processing, or refining crude oil, gas and products, or geothermal resources and associated minerals;

(C) discharging, storing, handling, transporting, reclaiming, or disposing of oil and gas waste, including hauling salt water for hire by any method other than pipeline;

(D) operating gasoline plants, natural gas or natural gas liquids processing plants, pressure maintenance or repressurizing plants, or recycling plants;

(E) recovering skim oil from a salt water disposal site;

(F) nominating crude oil;

(G) operating a directional survey company;

(H) cleaning a reserve pit;

(I) operating a pipeline;

(J) operating as a cementer approved for plugging wells; or

(K) operating an underground hydrocarbon or natural gas storage facility.

(2) The Commission shall notify organizations that perform operations not included in paragraph (1)(A)-(K) of this subsection of any additional activities subject to the jurisdiction of the Commission which require the filing of the organization report. Such notification shall make the provisions of this section applicable to such activities.

(3) Each organization performing activities subject to the jurisdiction of the Commission shall maintain a current organization report with the Commission until all duties, obligations, and liabilities incurred

pursuant to Commission rules, the Natural Resources Code, Titles 3 (Subtitles A, B, C, and Chapter 111 of Subtitle D) and 5, and the Water Code, Chapters 27 and 29, are fulfilled.

(4) The organization report shall contain the following information:

(A) the name, street address, mailing address, telephone number, and emergency after-hours telephone number of the organization;

(B) the plan of the business organization;

(C) for each officer, director, general partner, owner of more than 25% ownership interest, or trustee (hereinafter controlling entity) of the organization:

(i) that entity's or individual's full legal name, the name(s) under which such entity or individual conducts business in the State of Texas, and all assumed names;

(ii) the following:

(I) if the entity is an individual, his or her social security number. Any individual who does not have a valid social security number shall submit, at that person's option, either his or her valid driver's license or Texas State Identification number;

(II) if the entity is not an individual, the name and, at that person's option, either the valid driver's license, social security, or Texas Identification number of each officer, director, or other person, who, under Texas Natural Resources Code, §91.114, holds a position of ownership or control of the organization, or an active P-5 number for that entity. All controlling entities connected to an organization which are not individuals shall provide the identification of the individuals in ownership or control of those entities.

(iii) a street address different than that of the organization; and

(iv) if different from the mailing address of the organization, a mailing address;

(D) if a foreign or nonresident organization, the name and street address of a resident agent.

(E) the name of any non-employee agent that the organization authorizes to act for the organization in signing Oil and Gas Division certificates of compliance which initially designate the operator or change the designation of the operator. Organizations may designate non-employee agents to execute subsequent organization reports. That designation shall be authorized by the organization and not by a non-employee agent.

(5) Any organization may designate a resident agent with a street address different than that of the organization in place of submitting the street addresses of the three (if applicable) primary controlling entities of the organization. Any foreign or nonresident organization identified in paragraph (1) of this subsection shall designate and maintain a resident agent upon whom may be served any process, notice, or demand required or permitted by law to be served upon such entity by or on behalf of the Commission. Failure of such organization to designate and maintain a resident agent shall render the organization report invalid. (Reference Order Number 20-60,617, effective January 1, 1971.)

(6) Failure by any organization identified in paragraph (1) of this subsection to answer any subpoena, commission to take deposition, or directive to appear at a hearing served upon such organization by or on behalf of the Commission shall render the organization report invalid.

(7) An organization shall refile an organization report annually according to the schedule assigned by the

commission. Prior to the filing date, the commission shall mail notification and information to each organization for update of the organization report file. An organization shall file an amended organization report within 15 days after a change in any information required to be reported in the organization report. Only address changes may be made by letter.

(8) The commission shall meet any requirement under statute or commission rule for an order to be sent or notice to be given by the commission to an organization by mailing the item to the organization's mailing address shown on the most recently filed organization report or the most recently filed letter notification of change of address. Notices sent by regular first-class mail shall be presumed to have been received if, upon arrival of the deadline for any response to the notice, the wrapper containing the notice has not been returned to the commission. Any commission action or proceeding for which notice is required shall go forward on the basis of the notice provided under this subsection, whether or not actual notice has been received. Service of notices and orders sent by certified mail is effective upon:

(A) acceptance of the item by any person at the address;

(B) initial failure to claim or refusal to accept the item by any person at the address prior to its eventual return to the commission by the United States Postal Service; or

(C) return of the item to the commission by the United States Postal Service bearing a notation such as "addressee unknown," "no forwarding address," "forwarding order expired," or any similar notation indicating that the organization's mailing address shown on the most recently filed organization report or address change notification letter is incorrect.

(9) An organization may also designate to the commission in writing a specified address for all commission correspondence relating to a particular district. If designated by an operator, this specified address shall be used in lieu of the organization address for any notices, other than hearing notices, pertaining to that district.

(10) The commission may return, unapproved, to the organization address an organization report which is submitted to the commission not fully completed according to the report's written instructions and not timely corrected. In the event that the commission returns an organization report, all submitted financial assurances shall remain non-refundable. If an organization report approved by the commission is found to contain information that was materially false at the time it was submitted for approval, the commission may suspend or revoke the organization report after notice and opportunity for hearing.

(b) Record requirements. All entities who perform operations which are within the jurisdiction of the commission shall keep books showing accurate records of the drilling, redrilling, or deepening of wells, the volumes of crude oil on hand at the end of each month, the volumes of oil, gas, and geothermal resources produced and disposed of, together with records of such information on leases or property sold or transferred, and other information as required by commission rules and regulations in connection with the performance of such operations, which books shall be kept open for the inspection of the commission or its representatives, and shall report such information as required by the commission to do so.

(c) Time frame. All organizations shall keep copies of records, forms, and documents which are required to be filed with the commission, along with the supporting documents referred to in subsection (b) of this section, for a period of three years, or longer if required by another commission rule, and any such copies may be disposed of at the discretion of such entities after the original records, forms, and documents have been on file with the commission for the required period, except that particular documents shall be retained beyond the required period and until the resolution of pending commission regulatory enforcement proceedings if the documents contain information material to the determination of any issues therein. All records, forms, and documents required to be filed with the commission shall be filed in the same name, exactly as it appears on the organization report.

(d) Issuance of permits to organizations without active organization reports.

(1) Notwithstanding contrary provisions of this section, the commission or its delegate may issue a permit to an organization or individual that does not have an active organization report or does not ordinarily conduct oil and gas activities when the issuance of such a permit is determined to be necessary to implement a compliance schedule, or to remedy circumstances or a violation of a commission rule, order, license, permit, or certificate of compliance relating to safety or the prevention of pollution. For permits issued under this subsection, the commission may impose special conditions or terms not found in like permits issued pursuant to other commission rules. Any organization or individual who requests such a permit shall file an organization report and any other required forms for record-keeping purposes only. The report or form shall contain all information ordinarily required to be submitted to the commission.

(2) This section shall not limit the commission's authority to plug or to replug wells or to clean up pollution or unpermitted discharges of oil and gas waste.

(e) Each organization required to file an organization report under subsection (a) of this section or an affiliate of such an organization that performs operations within the jurisdiction of the Commission that files for federal bankruptcy protection shall provide written notice to the Commission of that action not later than the 30th day after the date the organization or the affiliate files for bankruptcy protection by submitting the notice to the Enforcement Section of the Office of General Counsel. All bankruptcy-related notices sent to the Commission shall be submitted in writing to that section. For the purpose of this section, affiliate means an organization that is effectively controlled by another.

(f) Organization reports shall not be approved unless the organization has complied with the state registration requirements of the Secretary of State and the taxation requirements of the Comptroller of Public Accounts. A tax dispute with the Comptroller of Public Accounts shall not be a basis for disapproving an organization report.

Source Note: The provisions of this §3.1 adopted to be effective January 1, 1976; amended to be effective January 1, 1981, 5 TexReg 4990; amended to be effective February 22, 1986, 11 TexReg 701; amended to be effective December 7, 1987, 12 TexReg 4411; amended to be effective July 22, 1991, 16 TexReg 3767; amended to be effective July 1, 1992, 17 TexReg 4173; amended to be effective May 22, 2000, 25 TexReg 4512; amended to be effective January 11, 2004, 29 TexReg 359

Next Rule>>

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.103	**Certification for Severance Tax Exemption for Casinghead Gas Previously Vented or Flared**

(a) Purpose. The purpose of this section is to provide a procedure by which an operator may obtain commission certification that the operator markets gas that was previously released into the air for 12 months or more pursuant to §3.32 of this title (relating to Gas Well Gas and Casinghead Gas Shall Be Used for Legal Purposes). Certification under this section is voluntary.

(b) Definitions. The following terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise:

(1) Oil lease--A commission-designated oil lease to which the commission has assigned an identifying number as listed on the monthly oil proration schedule at the time an application is filed under this rule.

(2) Oil well--A wellbore completed in a commission-designated field and assigned to an oil lease as listed on the monthly oil proration schedule at the time an application for certification is filed under this rule.

(c) Eligibility. An operator shall be eligible to receive the tax exemption on marketed casinghead gas for the life of an oil well or oil lease as listed on the oil proration schedule at the time an application for certification is filed under this rule if:

(1) the operator previously released the casinghead gas from an oil well or oil lease into the air for 12 months or more pursuant to §3.32 of this title; and

(2) the operator marketed the gas no earlier than June 1, 1997, in accordance with §3.32 of this title.

(d) Certification.

(1) An operator may apply for commission certification on the appropriate form. The completed form shall be accompanied by information necessary to establish:

(A) prior release into the air of casinghead gas for 12 months or more during a period of 13 consecutive months pursuant to §3.32 of this title; and

(B) such gas has generated taxable proceeds subject to the severance tax as a result of being marketed on or after September 1, 1997.

(2) The director of the commissions's Oil and Gas Division, or the director's delegate, may administratively approve or deny a request for certification.

(3) If the director of the commission's Oil and Gas Division or the director's delegate denies the request, the operator may request a hearing by filing such a request in writing within 15 days after the postmarked date of the notice of the administrative denial.

(4) If the operator fails to appear at the hearing without good cause, the request for certification shall be dismissed.

(5) Filings and correspondence concerning the application for certification shall be addressed to the Railroad Commission, P.O. Box 12967, Austin, Texas 78711-2967, Attention: Permitting/Production Services Section.

(e) Application to the Comptroller. After the commission issues the certification provided for in subsection (d) of this section, the operator may apply to the Comptroller of Public Accounts to receive the tax exemption.

(f) Termination of Authorization to Release Gas. On the date the commission issues the certification provided for in subsection (d) of this section, either by administrative action or by commission order, the volume of casinghead gas authorized to be released into the air as an exception obtained pursuant to §3.32(h) of this title shall be reduced to the volume of casinghead gas not subject to the certification. If all of the volume of casinghead gas authorized to be released under an exception is certified for purposes of the tax exemption, the exception shall no longer apply, and shall automatically terminate as of the date of certification.

Source Note: The provisions of this §3.103 adopted to be effective August 4, 1998, 23 TexReg 7770.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.102	**Tax Reduction for Incremental Production**

(a) Purpose. The purpose of this section is to provide a procedure by which an operator can obtain a 50% severance tax reduction for five years on the incremental oil and casinghead gas production from a qualifying lease.

(b) Definitions. The following terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise:

(1) Oil lease--A commission-designated oil lease to which the commission has assigned an identifying number.

(2) Production--Barrels of oil (including barrels of gas liquids reported as production monthly on the appropriate form) plus casinghead gas, where six thousand cubic feet of gas is the equivalent of one barrel of oil, expressed in barrels of oil equivalent (BOE).

(3) Baseline production--An oil lease's average BOE monthly production during the four highest months of production in the time period from January 1, 1996, through December 31, 1996.

(4) Incremental production--Production from a qualifying lease in excess of baseline production.

(5) Incremental production technique--

(A) any secondary or tertiary production enhancement technique;

(B) any primary production enhancement technique that an operator certifies required an expenditure of at least $5,000 to cause increased production.

(6) Qualifying lease--A lease is a qualifying lease provided that:

(A) the commission has designated the lease as an oil lease and has assigned to it an identifying number;

(B) production from the lease, measured by dividing the sum of lease production during the four-month period used to compute the baseline production by the sum of the number of well-days during the same four-month period, is no more than seven barrels of oil equivalent per day per well, excluding gas flared pursuant to the rules of the commission; and

(C) after the operator performs an incremental production technique, the lease shows incremental production for four of five consecutive months on or after September 1, 1997, and before December 31, 1998.

(7) Incremental ratio--The amount of a qualifying lease's average monthly incremental production during the four-month period used to meet the definition of a qualifying lease divided by its average monthly total production during the same four-month period.

(8) Qualified incremental production--A qualifying lease's total monthly production multiplied by the

incremental ratio.

(9) Well-day--One well producing hydrocarbons for one day.

(c) Qualification for the tax reduction. An operator of a qualifying lease is entitled to a 50% tax reduction on that lease's qualified incremental production for five years provided that:

(1) The operator of a qualifying lease applies to the commission for a determination of an incremental ratio before February 11, 1999;

(2) The commission certifies an incremental ratio;

(3) The operator provides to the state comptroller the certified incremental ratio; and

(4) The operator applies to the state comptroller for the tax relief provided by this section not later than one year after the date the commission certifies the incremental ratio for a qualifying lease.

(d) Request for hearing. If the request for certification of an incremental ratio is denied administratively, or if the operator does not agree with the administrative determination of the amount of the incremental ratio, the applicant may request a hearing. The request for a hearing must be filed within 20 days after the date on which notice of the administrative decision is mailed to the operator. The commission shall provide notice of the hearing to the applicant and to any other affected person named by the applicant. After hearing, the examiner shall recommend final action by the commission.

Source Note: The provisions of this §3.102 adopted to be effective June 23, 1998, 23 TexReg 6437.

List of Titles Back to List

HOME | TEXAS REGISTER | TEXAS ADMINISTRATIVE CODE | OPEN MEETINGS | HELP |

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.101	**Certification for Severance Tax Exemption or Reduction for Gas Produced From High-Cost Gas Wells**

(a) Purpose. This section specifies the procedure by which an operator can obtain a Railroad Commission of Texas certification that natural gas from a particular gas well qualifies as high-cost natural gas under the Texas Tax Code, Chapter 201, Subchapter B, §201.057(a)(2)(A) and that such gas is exempt from or eligible for a reduction of the severance tax imposed by the Texas Tax Code, Chapter 201.

(b) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Commission--The Railroad Commission of Texas.

(2) Completion--The act of making a well capable of producing gas from a particular commission designated or new field.

(3) Completion date--The date on which a well is first made capable of producing oil or gas from a particular commission-designated or new field, as shown on the completion report filed by the operator with the commission.

(4) Comptroller--The Comptroller of Public Accounts of the State of Texas.

(5) Data-point well--A well that has been tested and/or produced in the proposed tight gas formation; and, from the test results or other data, applicant provides a measured or calculated in situ permeability and/or a measured or calculated pre-stimulation stabilized flow rate against atmospheric pressure.

(6) Director--The director of the Oil and Gas Division or the director's delegate. Any authority given to the director in this section is also retained by the commission. Any action taken by the director pursuant to this section is subject to review by the commission.

(7) High-cost gas--Natural gas which the commission finds to be:

(A) produced from any gas well, if production is from a completion which is located at a depth of more than 15,000 feet;

(B) produced from geopressured brine;

(C) occluded natural gas produced from coal seams;

(D) produced from Devonian shale; or

(E) produced from designated tight formations or produced as a result of production enhancement work.

(8) Operator--The person responsible for the actual physical operation of a gas well.

(9) Spud date--The date of commencement of drilling operations, as shown on commission records.

(c) Applicability.

(1) A severance tax exemption is available for high-cost gas produced from a well that is spudded or completed between May 24, 1989, and September 1, 1996. Eligible high-cost gas shall be exempt from the tax imposed by the Texas Tax Code, Chapter 201, during the period from September 1, 1991, through August 31, 2001.

(2) A severance tax reduction is available for high-cost gas produced from a well that is spudded or completed after August 31, 1996. Eligible high-cost gas shall be entitled to a reduction of the tax imposed

by the Texas Tax Code, Chapter 201, for the first 120 consecutive calendar months beginning on the first day of production or until the cumulative value of the tax reduction equals 50% of the drilling and completion costs incurred for the well, whichever occurs first. The amount of tax reduction is determined pursuant to the Texas Tax Code, §201.057(c). If the application for certification is submitted to the Commission after January 1, 2004, the total allowable credit for taxes paid for reporting periods before the date the application is filed may not exceed the total tax paid on the gas that otherwise qualified for the exemption or tax reduction and that was produced during the 24 consecutive calendar months immediately preceding the month in which the application for certification under this section was filed with the Commission.

(3) The plug back or deepening of an existing wellbore qualifies as a completion under this section. When the plug back or deepening is completed prior to September 1, 1996, the gas produced may qualify for a tax exemption. When the plug back or deepening is completed after August 31, 1996, the gas produced may qualify for a tax reduction. The plug back or deepening qualifies as a completion if:

(A) it is the initial completion in a commission-designated or newly discovered field that has not been previously produced from that wellbore; or

(B) the operator can demonstrate that the strata between the former completion and the new completion contain a minimum of 20 vertical feet of impermeable strata; or

(C) the operator submits the results of bottom hole pressure surveys, gas analyses or other methods or calculations comparing the new completion with previous completions in the wellbore that were in existence prior to May 24, 1989. The application shall include an explanation of the engineering principles, calculations, and reasoning to show that the gas to be produced from the applied-for completion could not have been produced from any completion in existence prior to May 24, 1989.

(4) If the operator determines that a gas well previously certified as producing high-cost gas no longer produces high-cost gas or if the operator takes any action or discovers any information that affects the eligibility of gas for an exemption or tax reduction under Texas Tax Code, §201.057, the operator shall notify the Commission in writing within 30 days after such an event occurs.

(5) If the Commission determines that a gas well previously certified as producing high-cost gas no longer produces high-cost gas or if the commission takes any action or discovers any information that affects the eligibility of gas for an exemption or tax reduction under Texas Tax Code, §201.057, the Commission shall notify within 48 hours, in writing, the comptroller and the operator.

(d) Application procedure.

(1) An application for a state severance tax exemption or tax reduction for a gas well may be made only by the operator of that well. The operator shall file one copy of the required application form, one copy of the required attachments specified in subsection (e)(1)-(6) of this section and any additional information deemed necessary by the Commission to clarify, explain and support the required attachments. Submission of legible copies of required attachments shall comply if the application includes a statement, signed by the operator, that the attachments are true and correct copies of the documents originally filed with the Commission. However, the Commission may require an operator to file certified copies of required attachments or other documents from Commission files if necessary for a certification.

(2) Filings and correspondence on high-cost gas state severance tax applications shall be addressed to the Railroad Commission of Texas, P.O. Box 12967, Austin, Texas 78711-2967, Attention: High-Cost Gas Severance Tax Section. No filings may be made at the district offices.

(e) Application requirements for individual well certifications. To qualify for the severance tax exemption or tax reduction, the operator shall prove that the gas produced is high-cost gas by providing the following information:

(1) Applications for wells producing deep high-cost gas shall include:

(A) the completed applicable commission form; and

(B) copies of all Gas Well Back Pressure Test, Completion or Recompletion Reports and Logs ever filed on the subject well.

(2) Applications for wells producing geopressured brine shall include:

(A) the completed applicable commission form;

(B) copies of all Gas Well Back Pressure Test, Completion or Recompletion Reports and Logs ever filed on the subject well;

(C) a bottom-hole pressure test report and other information establishing the initial reservoir pressure gradient; and

(D) evidence to establish that, before production, the gas from the well was in solution in a brine aquifer with at least 10,000 parts of dissolved solids per million parts of water.

(3) Applications for wells producing coal seam gas shall include:

(A) the completed applicable commission form;

(B) copies of all Gas Well Back Pressure Test, Completion or Recompletion Reports and Logs ever filed on the subject well if the gas is produced through a wellbore, or a detailed description of the production process if the gas is not produced through a wellbore;

(C) a radioactivity, electric or other log which will define the coal seams or, if such logs are not reasonably available, a detailed lithologic description of the gas-producing interval; and

(D) evidence to establish that the natural gas was produced from coal seams.

(4) Applications for wells producing Devonian shale gas shall include:

(A) the completed applicable commission form;

(B) copies of all Gas Well Back Pressure Test, Completion or Recompletion Reports and Logs ever filed on the subject well;

(C) an environmentally corrected, calibrated gamma ray log with values greater than 100 API units over the Devonian age stratigraphic section, or a gamma ray log with superimposed indications of the shale base line and the gamma ray index of 0.7 over this section or, if the gamma ray log is not reasonably available, a driller's log or similar report indicating the general characteristics of the strata penetrated and the corresponding depths at which they are encountered throughout the Devonian age stratigraphic section;

(D) information which calculates the percentage of footage of the producing interval which is not Devonian shale as indicated by the gamma ray log, driller's log, or similar report;

(E) information which demonstrates that the percentage of potentially disqualifying nonshale footage for the stratigraphic section selected is equal to or less than 5.0% of the Devonian stratigraphic age interval; and

(F) reference to a standard stratigraphic chart or text establishing that the producing interval is a shale of Devonian age.

(5) Applications for wells producing designated tight formation gas shall include:

(A) the completed applicable commission form;

(B) copies of all Gas Well Back Pressure Test, Completion or Recompletion Reports and Logs ever filed on the subject well;

(C) specific reference to the commission docket number assigned to the applicable designated tight formation area certification along with a copy of the map with the subject well location shown, which outlines the designated tight formation area approved by the commission.

(6) Applications for wells producing production enhancement gas shall include:

(A) the completed applicable commission form;

(B) copies of all Gas Well Back Pressure Test, Completion or Recompletion Reports and Logs ever filed on the subject well;

(C) a description of the production enhancement work that has been performed on the well, including the dates the work was commenced and completed, or that will be performed on the well;

(D) an itemized statement of costs incurred in performing the production enhancement work, including copies of invoices and bills for such work, or, if the work has not yet been completed, estimates of such costs;

(E) a statement estimating, for a five-year test period beginning from the month in which the application is filed, the increase in gas production resulting from the application of production enhancement work;

(F) calculations showing that the projected increase in revenue does not exceed 200% of the §103 price;

(G) the renegotiated price;

(H) a copy of that portion of the sales contract that authorizes collection of the renegotiated price; and

(I) the properly executed statement under oath made by the purchaser of natural gas which states that there is a reasonable basis for the statements and estimates made by the applicant.

(f) Application requirements for tight formation area certifications.

(1) If justification for an individual well application is based on a tight formation certification and the well is not located within a geographical area that has been previously certified as a designated tight formation area or the well is not completed in a formation interval that has been previously certified as a designated tight formation by the Federal Energy Regulatory Commission under the Natural Gas Policy Act or by the Railroad Commission of Texas, the operator shall first apply for a tight formation area designation.

(2) An applicant requesting a tight formation area designation shall submit a written request to the High-Cost Gas Severance Tax Section, at the address given in subsection (d)(2) of this section, for a

certification that a named formation or a specific portion thereof is a tight formation. The applicant shall supply a list of the names and addresses of all affected persons. For purposes of this subsection, "affected persons" means all operators of all wells listed on the current proration schedule for the applicable field or fields located within the proposed designated area. The applicant shall mail or deliver a copy of the prescribed, completed notice of application form to all affected persons, and if required, shall publish the notice of application in accordance with §1.46 of this title (relating to Notice by Publication in Oil and Gas and Surface Mining and Reclamation Nonrulemaking Proceedings), as found in the Commission's General Rules of Practice and Procedure (16 Texas Administrative Code Chapter 1). Notice of application forms may be obtained by contacting the Railroad Commission of Texas, P.O. Box 12967, Austin, Texas 78711-2967, Attention: High-Cost Severance Tax Section. Before Cont'd...

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.100	**Seismic Holes and Core Holes**

(a) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Seismic hole--Any hole drilled for the purpose of securing geophysical information to be used in the exploration or development of oil, gas, geothermal, or other mineral resources.

(2) Core hole--Any hole drilled for the purpose of securing geological information to be used in the exploration or development of oil, gas, geothermal, or other mineral resources, except coal or uranium. For regulations governing coal exploratory wells, see Chapter 12 of this title (relating to Coal Mining Regulations), and for regulations governing uranium exploratory wells, see Chapter 11, Subchapter C of this title (relating to Surface Mining and Reclamation Division, Substantive Rules--Uranium Mining).

(3) Project area--The geographic area in which an exploratory survey involving one or more seismic holes or core holes is carried out.

(4) Protection depth--Depth or depths at which usable quality water must be protected or isolated, as determined by the Texas Commission on Environmental Quality (TCEQ) or its successor agencies.

(5) Operator--The person who contracts for the services of a seismic crew or core hole drilling contractor or, if the seismic survey or core hole testing is not performed on a contract basis, but is performed by an exploration and production company or by a geophysical contractor for speculative purposes, the person who drills the seismic holes or core holes.

(6) Commission--The Railroad Commission of Texas or its authorized representative.

(b) Exemption. Any seismic hole or core hole drilled to a depth of 20 feet or less is not subject to the requirements of this section.

(c) Determination of protection depth. Before drilling any seismic hole or core hole in a project area, an operator shall obtain a letter from the TCEQ stating the protection depth or depths in the project area.

(d) Drilling permits.

(1) Holes that do not penetrate any protection depth. A seismic hole or core hole that does not penetrate any protection depth does not require a drilling permit.

(2) Holes that penetrate any protection depth. A seismic hole or core hole that penetrates any protection depth requires a drilling permit to satisfy the requirements for exploratory wells described in §3.5(g) of this title (relating to Application To Drill, Deepen, Reenter, or Plug Back) (Statewide Rule 5).

(e) Plugging.

(1) Holes that do not penetrate any protection depth. A seismic hole or core hole that does not penetrate any protection depth must be plugged in accordance with subparagraph (A) or (B) of this paragraph. Seismic

holes must be plugged after the hole is loaded with explosives. Core holes must be plugged immediately after completion of coring the hole.

(A) The operator shall adequately plug the hole by filling it from total depth to a depth of no more than 16 feet below the surface with drill cuttings and/or bentonite. Immediately above the drill cuttings and/or bentonite, the operator shall place a bentonite plug no less than 10 feet in length. A plastic cap imprinted with the name of the operator shall be set above the bentonite plug no less than three feet below the surface. The remainder of the hole shall be filled with drill cuttings or native soil. All precautions should be taken to prevent bentonite from bridging over.

(B) Alternative plugging procedures and materials may be utilized when the operator has demonstrated to the commission's satisfaction that the alternatives will protect usable quality water.

(2) Holes that penetrate any protection depth. A seismic hole or core hole that penetrates any protection depth must be plugged in accordance with the requirements of §3.14 of this title (relating to Plugging) (Statewide Rule 14) and a plastic cap imprinted with the name of the operator shall be set in the hole no less than three feet below the surface.

(f) Physical requirements for bentonite plugging materials. Bentonite materials used to plug seismic or core holes shall be derived from naturally occurring, untreated, high swelling sodium bentonite that is composed of at least 85% montmorillonite clay and that meets the International Association of Geophysical Contractors (IAGC) recommended geophysical industry standard dated January 24, 1992, for the physical characteristics of bentonite used in seismic shot hole plugging.

(g) Reporting.

(1) Holes that do not penetrate any protection depth. Within 30 days of plugging the last hole in the project area, the operator shall submit a letter to the commission stating that each seismic hole or core hole in the project area has been plugged in accordance with subsection (e)(1) of this section. The letter must include the plugging date for each hole and the name and address of the operator. A plat of the project area identifying seismic or core hole locations, counties, survey lines, scale, and northerly direction must be attached. A United States Geological Survey map of the project area with hole locations marked will satisfy the plat requirement. In addition, a letter from the TCEQ stating the protection depth or depths must be attached.

(2) Holes that penetrate any protection depth. For any seismic or core hole that penetrates any protection depth, a plugging record shall be filed in accordance with §3.14 of this title (relating to Plugging) (Statewide Rule 14).

Source Note: The provisions of this §3.100 adopted to be effective September 1, 1992, 17 TexReg 5283; amended to be effective August 25, 2003, 28 TexReg 6816

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.99	**Cathodic Protection Wells**

(a) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Cathodic protection well--Any well drilled for the purpose of installing one or more anodes to prevent corrosion of a facility associated with the production of oil, gas, or geothermal resources, such as a well casing, storage and separation facility, or pipeline.

(2) Project area--The geographic area in which a related group of cathodic protection wells is drilled.

(3) Protection depth--Depth or depths at which usable quality water must be protected or isolated, as determined by the Texas Commission on Environmental Quality (TCEQ) or its successor agencies.

(4) Commission--The Railroad Commission of Texas or its authorized representative.

(b) Exemption. Any cathodic protection well that is drilled to a depth of 30 feet or less is not subject to the requirements of this section.

(c) Determination of protection depth. Before drilling any cathodic protection well, an operator shall obtain a letter from the TCEQ stating the protection depth or depths.

(d) Drilling permits.

(1) Wells that do not penetrate any protection depth. A cathodic protection well that does not penetrate any protection depth does not require a drilling permit.

(2) Wells that penetrate any protection depth. A cathodic protection well that penetrates any protection depth must be drilled in accordance with the requirements of §3.5(g) of this title (relating to Application To Drill, Deepen, Reenter, or Plug Back) (Statewide Rule 5).

(e) Completion.

(1) Timing. A cathodic protection well must be completed as soon as possible after it is drilled.

(2) Wells that do not penetrate any protection depth. A cathodic protection well that does not penetrate any protection depth must be completed in accordance with subparagraph (A) or (B) of this paragraph.

(A) The operator must place at least a 10-foot cement or bentonite plug at the top of the well. The top of the plug shall be no less than three feet below the surface, and the remainder of the hole between the top of the plug and the surface shall be filled with drill cuttings or native soil.

(B) Alternative completion procedures and materials may be utilized when the operator has demonstrated to the commission's satisfaction that the alternatives will protect usable quality water.

(3) Wells that penetrate any protection depth. A cathodic protection well that penetrates any protection

depth must be completed in accordance with subparagraph (A) or (B) of this paragraph.

(A) The operator must either set and cement casing to the deepest protection depth penetrated or center a 100-foot cement plug across each protection depth penetrated and must place at least a 10-foot cement or bentonite plug at the top of the well. The top of the plug shall be no less than three feet below the surface, and the remainder of the hole between the top of the plug and the surface shall be filled with drill cuttings or native soil.

(B) Alternative completion procedures and materials may be utilized when the operator has demonstrated to the commission's satisfaction that the alternatives will protect usable quality water.

(f) Physical requirements for bentonite plugging materials. Bentonite materials used to plug cathodic protection wells shall be derived from naturally occurring, untreated, high swelling sodium bentonite that is composed of at least 85% montmorillonite clay and that meets the International Association of Geophysical Contractors (IAGC) recommended geophysical industry standard dated January 24, 1992, for the physical characteristics of bentonite used in seismic shot hole plugging.

(g) Reporting. Within 30 days of completion of the last well in a project area, the operator shall submit a letter to the commission stating that each cathodic protection well in the project area has been completed in accordance with subsection (e) of this section. The letter must include the completion date for each well, the name and address of the operator, and the drilling permit and API numbers of the well, if applicable. A plat of the project area identifying cathodic protection well locations, counties, survey lines, scale, and northerly direction must be attached. In addition, a letter from the TCEQ stating the protection depth or depths must be attached.

(h) Abandonment. Upon abandonment of a cathodic protection well, any wires or vent pipe must be cut off at the top of the 10-foot surface plug, and the vent pipe must be securely capped or plugged.

Source Note: The provisions of this §3.99 adopted to be effective July 21, 1992, 17 TexReg 4877; amended to be effective August 25, 2003, 28 TexReg 6816

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.98	**Standards for Management of Hazardous Oil and Gas Waste**

(a) Purpose. The purpose of this section is to establish standards for management of hazardous oil and gas waste.

(b) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Activities associated with the exploration, development, and production of oil or gas or geothermal resources--Activities associated with:

(A) the drilling of exploratory wells, oil wells, gas wells, or geothermal resource wells;

(B) the production of oil, gas, or geothermal resources, including:

(i) activities associated with the drilling of injection water source wells that penetrate the base of usable quality water;

(ii) activities associated with the drilling of cathodic protection holes associated with the cathodic protection of wells and pipelines subject to the jurisdiction of the commission to regulate the production of oil, gas, or geothermal resources;

(iii) activities associated with natural gas or natural gas liquids processing plants or reservoir pressure maintenance or repressurizing plants;

(iv) activities associated with any underground natural gas storage facility, provided the terms "natural gas" and "storage facility" shall have the meanings set out in Texas Natural Resources Code, §91.173;

(v) activities associated with any underground hydrocarbon storage facility, provided the terms "hydrocarbons" and "underground hydrocarbon storage facility" shall have the meanings set out in Texas Natural Resources Code, §91.201; and

(vi) activities associated with the storage, handling, reclamation, gathering, transportation, or distribution of oil or gas prior to the refining of such oil or prior to the use of such gas in any manufacturing process or as a residential or industrial fuel;

(C) the operation, abandonment, and proper plugging of wells subject to the jurisdiction of the commission to regulate the exploration, development, and production of oil or gas or geothermal resources; and

(D) the discharge, storage, handling, transportation, reclamation, or disposal of waste or any other substance or material associated with any activity listed in subparagraphs (A) - (C) of this paragraph.

(2) Administrator--The administrator of the United States Environmental Protection Agency, or the administrator's designee.

(3) Authorized facility--Either:

(A) an authorized recycling or reclamation facility; or

(B) an authorized treatment, storage, or disposal facility.

(4) Authorized recycling or reclamation facility--A facility permitted in accordance with the requirements of 40 CFR, Parts 270 and 124 or Part 271, if required, at which hazardous waste that is to be recycled or reclaimed is managed and whose owner or operator is subject to regulation under:

(A) 40 CFR, §261.6(c) or an equivalent state program (concerning facilities that recycle recyclable materials); or

(B) 40 CFR, Part 266, Subparts C (concerning recyclable materials used in a manner constituting disposal), F (concerning recyclable materials used for precious metal recovery), or G (concerning spent lead-acid batteries being reclaimed), or an equivalent state program.

(5) Authorized representative--The person responsible for the overall operation of all or any part of a facility or generation site.

(6) Authorized treatment, storage, or disposal facility--A facility at which hazardous waste is treated, stored, or disposed of that:

(A) has received either:

(i) a permit (or interim status) in accordance with the requirements of 40 CFR, Parts 270 and 124 (EPA permit); or

(ii) a permit (or interim status) from a state authorized in accordance with 40 CFR, Part 271; and

(B) is authorized under applicable state or federal law to treat, store, or dispose of that type of hazardous waste. If a hazardous oil and gas waste is destined to a facility in an authorized state that has not yet obtained authorization from the EPA to regulate that particular hazardous waste, then the designated facility must be a facility allowed by the receiving state to accept such waste and the facility must have a permit issued by the EPA to manage that waste.

(7) Centralized Waste Collection Facility or CWCF--A facility that meets the requirements of subsection (m)(3) of this section.

(8) Certification--A statement of professional opinion based upon knowledge and belief.

(9) CFR--Code of Federal Regulations.

(10) CESQG--A conditionally exempt small quantity generator, as described in subsection (f)(1) of this section (relating to generator classification and accumulation time).

(11) Commission--The Railroad Commission of Texas or its designee.

(12) Container--Any portable device in which material is stored, transported, treated, disposed of, or otherwise handled.

(13) Contaminated media--Soil, debris, residues, waste, surface waters, ground waters, or other materials containing hazardous oil and gas waste as a result of a discharge or clean-up of a discharge.

(14) Department of Transportation or DOT--The United States Department of Transportation.

(15) Designated facility--An authorized facility that has been designated on the manifest by the generator pursuant to the provisions of subsection (o)(1) of this section (relating to general manifest requirements).

(16) Discharge or hazardous waste discharge--The accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water.

(17) Disposal--The discharge, deposit, injection, dumping, spilling, leaking, or placing of any hazardous waste into or on any land or water so that such waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including ground waters.

(18) Disposal facility--A facility or part of a facility at which hazardous waste is intentionally placed into or on any land or water, and at which waste will remain after closure.

(19) Elementary neutralization unit--A device consisting of a tank, tank system, container, transport vehicle, or vessel that is used for neutralizing wastes that are hazardous wastes:

(A) only because they exhibit the characteristic of corrosivity under the test referred to in subsection (e)(1)(D)(ii) of this section (relating to characteristically hazardous wastes); or

(B) they are identified in subsection (e)(1)(D)(i) of this section (relating to listed hazardous wastes) only because they exhibit the corrosivity characteristic.

(20) Empty container--A container or an inner liner removed from a container that has held any hazardous waste and that meets the requirements of 40 CFR, §261.7(b).

(21) Environmental Protection Agency or EPA--The United States Environmental Protection Agency.

(22) EPA Acknowledgment of Consent--The cable sent to the EPA from the United States Embassy in a receiving country that acknowledges the written consent of the receiving country to accept the hazardous waste and describes the terms and conditions of the receiving country's consent to the shipment.

(23) EPA hazardous waste number--The number assigned by the EPA to each hazardous waste listed in 40 CFR, Part 261, Subpart D, and to each characteristic identified in 40 CFR, Part 261, Subpart C.

(24) EPA identification number or EPA ID Number--The number assigned by the EPA to each hazardous waste generator, transporter, and treatment, storage, or disposal facility.

(25) EPA Form 8700-12--The EPA form that must be completed and delivered to the commission in order to obtain an EPA ID number.

(26) Executive director of the TCEQ--The executive director of the TCEQ or the executive director's designee.

(27) Facility--All contiguous land, including structures, other appurtenances, and improvements on the land, used for recycling, reclaiming, treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (e.g., one or more landfills, surface impoundments, or combinations thereof).

(28) Generate--To produce hazardous oil and gas waste or to engage in any activity (such as importing) that first causes a hazardous oil and gas waste to become subject to regulation under this section.

(29) Generation site--

(A) Excluding sites addressed in subparagraphs (B) (relating to pipelines) and (C) (relating to gas plants) of this paragraph, any of the following operational units that are owned or operated by one person and other sites at which hazardous oil and gas waste is generated or where actions first cause a hazardous oil and gas waste to become subject to regulation, including but not limited to:

(i) all oil and gas wells that produce to one set of storage or treatment vessels, such as a tank battery, the storage or treatment vessels, associated flowlines, and related land surface;

(ii) an injection or disposal site, that is not part of a generation site described in subparagraph (A)(i) of this paragraph, its related injection or disposal wells, associated injection lines, and related land surface;

(iii) an offshore platform; or

(iv) any other site, including all structures, appurtenances, or other improvements associated with that site that are geographically contiguous, but which may be divided by public or private right-of-way, provided the entrance and exit between the properties is at a cross-roads intersection, and access is by crossing as opposed to going along, the right-of-way.

(B) In the case of a pipeline system (other than a field flowline or injection line system), an equipment station (such as a pump station, breakout station, or compressor station) or any other location along a pipeline (such as a drip pot, pigging station, or rupture), together with any and all structures, other appurtenances, and improvements:

(i) that are geographically contiguous with or are physically related to an equipment station or other location described in this paragraph, but excluding any pipeline that connects two or more such stations or locations;

(ii) that are owned or operated by one person; and

(iii) at which hazardous oil and gas waste is produced or where actions first cause a hazardous oil and gas waste to become subject to regulation.

(C) A natural gas treatment or processing plant or a natural gas liquids processing plant.

(30) Generator--Any person, by generation site, whose act or process produces hazardous oil and gas waste or whose act first causes a hazardous oil and gas waste to become subject to regulation under this section, or such person's authorized representative.

(31) Geothermal energy and associated resources Geothermal energy and associated resources as defined in Texas Natural Resources Code, §141.003(4).

(32) Hazardous oil and gas waste--Any oil and gas waste determined to be hazardous under the provisions of subsection (e) of this section (relating to hazardous waste determination).

(33) Hazardous oil and gas waste constituent--A hazardous waste constituent of hazardous oil and gas waste.

(34) Hazardous waste--A hazardous waste, as defined in 40 CFR, §261.3, including a hazardous oil and gas waste.

(35) Hazardous waste constituent--A constituent that caused the administrator to list a hazardous waste in

40 CFR, Part 261, Subpart D, or a constituent listed in table 1 of 40 CFR, §261.24.

(36) International shipment--The transportation of hazardous oil and gas waste into or out of the jurisdiction of the United States.

(37) Land disposal--The placement in or on the land, except as otherwise provided in 40 CFR, Part 268, including placement in a landfill, surface impoundment, waste pile, injection well, land treatment facility, salt dome formation, salt bed formation, or underground mine or cave, or placement in a concrete vault or bunker intended for disposal purposes.

(38) LQG--A large quantity generator, as described in subsection (f)(3) of this section (relating to generator classification and accumulation time).

(39) Management--The systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous waste.

(40) Manifest--The shipping document required pursuant to the provisions of subsection (o) of this section (relating to manifests).

(41) Manifest document number--The 12-digit identification number assigned to a generator by the EPA, plus a unique five-digit document number assigned to the manifest by the generator, or preprinted on the manifest, for recording and reporting purposes.

(42) Oil and gas waste--Waste generated in connection with activities associated with the exploration, development, and production of oil or gas or geothermal resources, or the solution mining of brine. Until delegation of authority under RCRA to the commission by EPA, the term "oil and gas waste" shall exclude hazardous waste arising out of or incidental to activities associated with natural gas treatment or natural gas liquids processing plants and reservoir pressure maintenance or repressurizing plants.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.97	**Underground Storage of Gas in Salt Formations**

(a) Definitions. The following terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Affected person--A person who, as a result of actions proposed in an application for a storage facility permit or amendment or modification of an existing storage facility permit, has suffered or may suffer actual injury or economic damage other than as a member of the general public.

(2) Cavern--The storage space created in a salt formation by solution mining.

(3) Commission--The Railroad Commission of Texas.

(4) Emergency shutdown valve--A valve that automatically closes to isolate a gas storage well from surface piping in the event of specified conditions that, if uncontrolled, may cause an emergency.

(5) Fresh water--Water having bacteriological, physical, and chemical properties that make it suitable and feasible for beneficial use for any lawful purpose. For purposes of this section, brine associated with the creation, operation, and maintenance of an underground gas storage facility is not considered fresh water.

(6) Gas storage well or storage well--A well used for the injection or withdrawal of natural gas or any other gaseous substance into or out of an underground gas storage facility.

(7) Leak detector--A device capable of detecting by chemical or physical means the presence of hydrocarbon vapor or the escape of vapor through a small opening.

(8) Operator--The person recognized by the commission as being responsible for the physical operation of an underground gas storage facility, or such person's authorized representative.

(9) Owner--The person recognized by the commission as owning all or part of an underground gas storage facility, or such person's authorized representative.

(10) Person--A natural person, corporation, organization, government, governmental subdivision or agency, business trust, estate, trust, partnership, association, or any other legal entity.

(11) Pollution--Alteration of the physical, chemical, or biological quality of, or the contamination of, water that makes it harmful, detrimental, or injurious to humans, animal life, vegetation, or property, or to public health, safety, or welfare, or impairs the usefulness or the public enjoyment of the water for any lawful or reasonable purpose.

(12) Underground gas storage facility or storage facility--A facility used for the storage of natural gas or any other gaseous substance in an underground salt formation, including surface and subsurface rights, appurtenances, and improvements necessary for the operation of the facility.

(b) Permit required.

(1) General. No person may create, operate, or maintain an underground gas storage facility without obtaining a permit from the commission. A permit issued by the commission for such activities before the effective date of this section shall continue in effect until revoked, modified, or suspended by the commission, or until it expires according to its terms. The provisions of this section apply to permits to conduct gas storage operations issued prior to the effective date of this section, except as otherwise specifically provided.

(2) Conflict with other requirements. If a provision of this section conflicts with any provision or term of a commission order, field rule, or permit, the provision of such order, field rule, or permit shall control.

(c) Application.

(1) Information required. An application for a permit to create, operate, or maintain an underground gas storage facility shall be filed with the commission by the owner or operator, or the proposed owner or operator, on the prescribed form. The application shall contain the information necessary to demonstrate compliance with applicable state laws and commission regulations.

(2) Permit amendment. An application for amendment of an existing underground gas storage facility permit shall be filed with the commission:

(A) prior to any planned enlargement of a cavern in excess of the permitted cavern capacity by solution mining;

(B) when required in accordance with paragraph (3) of this subsection;

(C) prior to the drilling of any additional storage wells;

(D) prior to an increase in the maximum operating pressure above the permitted pressure; or

(E) any time that conditions at the storage facility deviate materially from the conditions specified in the permit or permit application.

(3) Increase in capacity. The owner or operator of a storage facility shall notify the commission if information indicates that the capacity of a cavern exceeds the permitted cavern capacity by 20% or more. Such notification shall be made in writing to the commission within 10 days of the date that the owner or operator of the storage facility knows or has reason to know that the cavern capacity exceeds the permitted capacity by 20% or more. The notification shall include a description of the information that indicates that the permitted cavern capacity has been exceeded, and an estimate of the current cavern capacity. Upon receipt of such information, the commission or its designee may take any one or more of the following actions:

(A) require the permittee to comply with a compliance schedule that lists measures to be taken to ensure that conditions at the storage facility do not pose a danger to life or property, and that no waste of gas, uncontrolled escape of gas, or pollution of fresh water occurs;

(B) require the permittee to file an application to amend the underground gas storage facility permit;

(C) modify, cancel, or suspend the permit as provided in subsection (f) of this section; or

(D) take enforcement action.

(d) Standards for underground storage zone.

(1) Impermeable salt formation. An underground gas storage facility may be created, operated, or maintained only in an impermeable salt formation in a manner that will prevent waste of the stored gases, uncontrolled escape of gases, pollution of fresh water, and danger to life or property. This section does not authorize storage of liquid or liquefied hydrocarbons in an underground salt formation. A permit under §3.95 of this title (relating to Underground Storage of Liquid or Liquefied Hydrocarbons in Salt Formations) is required to convert from storage of natural gas to storage of liquid or liquefied hydrocarbons in an underground salt formation.

(2) Fresh water strata. The applicant must submit with the application a letter from the Texas Commission on Environmental Quality or its successor agencies stating the depth to which fresh water strata occur at each storage facility.

(e) Notice and hearing.

(1) Notice requirements. Such notice shall be given no later than the date the application is mailed to or filed with the commission. The applicant shall give notice of an application for a permit to create, operate, or maintain an underground gas storage facility, or to amend an existing storage facility permit, by mailing or delivering a copy of the application form to:

(A) the surface owner of the tract where the storage facility is located or is proposed to be located;

(B) the surface owner of each tract adjoining the tract where the storage facility is located or is proposed to be located;

(C) each oil, gas, or salt leaseholder, other than the applicant, of the tract on which the storage facility is located or is proposed to be located;

(D) each oil, gas, or salt leaseholder of any tract adjoining the tract on which the storage facility is located or is proposed to be located;

(E) the county clerk of the county or counties where the storage facility is located or is proposed to be located; and

(F) if the storage facility is located or is proposed to be located within city limits, the city clerk or other appropriate city official.

(2) Publication of notice. Notice of the application, in a form approved by the commission or its designee, shall be published by the applicant once a week for three consecutive weeks in a newspaper of general circulation in the county where the storage facility is or is proposed to be located. The applicant shall file proof of publication prior to any hearing on the application or administrative approval of the application.

(3) Notice by publication. The applicant shall make diligent efforts to ascertain the name and address of each person identified under paragraph (1)(A) - (D) of this subsection. The exercise of diligent efforts to ascertain names and addresses of such persons shall require an examination of the county records here the facility is located and an investigation of any other information of which the applicant has actual knowledge. If, after diligent efforts, the applicant has been unable to ascertain the name and address of one or more persons required to be notified under paragraph (1)(A) - (D) of this subsection, the notice requirements for those persons are satisfied by the publication of the notice of application as required in paragraph (2) of this subsection. The applicant must submit an affidavit to the commission specifying the efforts that were taken to identify each person whose name and/or address could not be ascertained.

(4) Hearing required for new permits. A permit application for a new underground gas storage facility will

be considered for approval only after notice and hearing. The commission will give notice of the hearing to all affected persons, local governments, and other persons who express, in writing, an interest in the application. After hearing, the examiner shall recommend a final action by the commission.

(5) Hearing on permit amendments.

(A) An application for an amendment to an existing storage facility permit may be approved administratively if the commission receives no protest from a person notified pursuant to paragraph (1) of this subsection or from any other affected person.

(B) If the commission receives a protest from a person notified pursuant to paragraph (1) of this subsection or from any other affected person within 15 days of the date of receipt of the application by the commission, or of the date of the third publication, whichever is later, or if the commission determines that a hearing is in the public interest, then the applicant will be notified that the application cannot be approved administratively. The commission will schedule a hearing on the application upon written request of the applicant. The commission will give notice of the hearing to all affected persons, local governments, and other persons who express, in writing, an interest in the application. After hearing, the examiner shall recommend a final action by the commission.

(C) If the application is administratively denied, a hearing will be scheduled upon written request of the applicant. After hearing, the examiner shall recommend a final action by the commission.

(f) Modification, cancellation, or suspension of a permit.

(1) General. Any permit may be modified, suspended, or canceled after notice and opportunity for hearing if:

(A) a material change in conditions has occurred in the operation, maintenance, or construction of the storage facility, or there are material deviations from the information originally furnished to the commission. A change in conditions at a facility that does not affect the safe operation of the facility or the ability of the facility to operate without causing waste of hydrocarbons or pollution is not considered to be material;

(B) pollution of fresh water is likely as a result of continued operation of the storage facility;

(C) there are material violations of the terms and provisions of the permit or commission regulations;

(D) the applicant has misrepresented any material facts during the permit issuance process; or

(E) injected fluids are escaping or are likely to escape from the storage facility.

(2) Imminent danger. Notwithstanding the provisions of paragraph (1) of this subsection, in the event of an emergency that presents an imminent danger to life or property, or where waste of hydrocarbons, uncontrolled escape of hydrocarbons, or pollution of fresh water is imminent, the commission or its designee may immediately suspend a storage facility permit until a final order is issued pursuant to a hearing, if any, conducted in accordance with the provisions of paragraph (1) of this subsection. All operations at the facility shall cease upon suspension of a permit under this paragraph.

(g) Transfer of permit. A storage facility permit may not be transferred without the prior approval of the commission, or its designee. Until such transfer is approved by the commission or its designee, the proposed transferee may not conduct any activities authorized by the permit. The following procedure shall be followed when requesting approval for transfer of a permit.

(1) Request. Prior to transferring either ownership or operation of a storage facility, the permittee shall file

with the commission a request for transfer of the permit. Such a request may not be filed unless a completed Form P-4, signed by both the permittee and the proposed transferee, has been filed with the commission.

(2) Approval. The commission, or its designee, shall approve the transfer of a storage facility permit, provided:

(A) the proposed transferee is not the subject of any unsatisfied commission enforcement order at the time of the request for permit transfer; and

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.96	**Underground Storage of Gas in Productive or Depleted Reservoirs**

(a) Definitions. The following terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Affected person--A person who, as a result of actions proposed an application for an underground gas storage project permit or an amendment or modification of an existing underground gas storage project permit, has suffered or may suffer actual injury or economic damage other than as a member of the general public.

(2) Commission--The Railroad Commission of Texas.

(3) Fresh water--Water having bacteriological, physical, and chemical properties that make it suitable and feasible for beneficial use for any lawful purpose.

(4) Leak detector--A device capable of detecting by chemical or physical means the presence of hydrocarbon vapor or the escape of vapor through a small opening.

(5) Gas storage or underground gas storage--Storage of natural gas or other gaseous material in a productive or depleted reservoir, exclusive of gas injection for enhanced recovery.

(6) Gas storage project--All surface and subsurface rights, appurtenances, and improvements necessary for conducting underground gas storage operations in a gas storage reservoir.

(7) Gas storage well or storage well--A well used to inject or withdraw natural gas or other gaseous material stored in a productive or depleted reservoir, exclusive of a well used to inject gas for enhanced recovery.

(8) Operator--The person recognized by the commission as being responsible for the physical operation of a gas storage project, or such person's authorized representative.

(9) Person--A natural person, corporation, organization, government, governmental subdivision or agency, business trust, estate, trust, partnership, association, or any other legal entity.

(10) Pollution--Alteration of the physical, chemical, or biological quality of, or the contamination of, water that makes it harmful, detrimental, or injurious to humans, animal life, vegetation, or property, or to public health, safety, or welfare, or impairs the usefulness or the public enjoyment of the water for any lawful or reasonable purpose.

(11) Productive or depleted reservoir--A subsurface sand, stratum, or formation that is productive of, or has previously produced, oil, gas, or geothermal resources.

(b) Permit required.

(1) General. No person may operate a gas storage project without obtaining a permit from the commission.

A permit issued by the commission for operation of a gas storage project before the effective date of this section shall continue in effect until revoked, modified, or suspended by the commission, or until it expires according to its terms. The provisions of this section apply to gas storage projects permitted prior to the effective date of this section, except as otherwise specifically provided.

(2) Conflict with other requirements. If a provision of this section conflicts with any provision or term of a commission order, field rule, or permit, the provision of such order, field rule, or permit shall control.

(c) Application. An application to operate a gas storage project shall be filed with the commission by the owner or operator or proposed owner or operator. The application shall include the following:

(1) compliance with safety requirements--information demonstrating compliance with the provisions of subsection (i) of this section;

(2) request for reservoir designation--a request for designation of a productive or depleted reservoir as a gas storage reservoir, supported by the following:

(A) information demonstrating that the reservoir is suitable for gas storage; and

(B) information demonstrating the amount of recoverable native gas remaining in the reservoir;

(3) compliance with standards for injection wells--information demonstrating compliance with the provisions of subsections (j), (k), and (l) of this section for each gas injection well. The requirements of this paragraph do not apply to wells used for gas withdrawal only;

(4) water protection letter--a letter from the Texas Commission on Environmental Quality or its successor agencies stating the depth to which fresh water strata occur in the project area;

(5) public interest--a request that the commission issue an order containing the findings described in the Texas Natural Resources Code, §91.174(a), if such an order is desired by the applicant;

(6) fees--the fees required under §3.78 of this title (relating to Fees and Financial Security Requirements) for each gas storage well in the storage project that will be used for injection.

(d) Permit amendment. An application for amendment of an existing gas storage project permit shall be filed with the commission as specified in paragraphs (1)-(4) of this subsection.

(1) Expansion of reservoir. An application for permit amendment shall be filed prior to expanding the areal extent of the gas storage reservoir.

(2) Increase in pressure. An application for permit amendment shall be filed prior to increasing the gas storage reservoir pressure above the maximum permitted pressure.

(3) Adding storage wells. An application for permit amendment shall be filed prior to adding additional gas storage wells to the project.

(4) Material deviation. An application for permit amendment shall be filed at any time that conditions at the storage project deviate materially from the conditions specified in the permit or permit application.

(e) Standards for storage reservoir. A gas storage project shall be operated only in a productive or depleted reservoir in a manner that will prevent waste of oil, gas, or geothermal resources, uncontrolled escape of gases, pollution of fresh water, and danger to life or property.

(f) Notice and hearing.

(1) Notice requirements. By no later than the date the application is mailed to or filed with the commission, the applicant shall give notice of an application for a permit to operate a gas storage project, or to amend an existing storage project permit, by mailing or delivering a copy of the application to:

(A) each mineral interest owner, other than the applicant, of the proposed gas storage reservoir;

(B) each leaseholder of minerals lying above or below the proposed gas storage reservoir;

(C) each leaseholder of minerals offsetting the proposed gas storage reservoir;

(D) each owner or leaseholder of any portion of the surface overlying the proposed gas storage reservoir;

(E) the clerk of the county or counties where the proposed gas storage reservoir is located; and

(F) the city clerk or other appropriate city official where the proposed gas storage reservoir is located within city limits.

(2) Publication of notice. Notice of the application for an original or amended gas storage project permit, in a form approved by the commission or its designee, shall be published by the applicant once a week for three consecutive weeks in a newspaper of general circulation in the county where the gas storage project is located. The applicant shall file proof of publication of the notice prior to any hearing on the application or administrative approval.

(3) Notice by publication. The applicant shall make diligent efforts to ascertain the name and address of each person identified under paragraph (1)(A)-(D) of this subsection. The exercise of diligent efforts to ascertain the names and addresses of such persons shall require an examination of county records where the facility is located and an investigation of any other information of which the applicant has actual knowledge. If, after diligent efforts, the applicant has been unable to ascertain the name and address of one or more persons required to be notified under paragraph (1)(A)-(D) of this subsection, the notice requirements for those persons are satisfied by the publication of the notice of application as required in paragraph (2) of this subsection. The applicant must submit an affidavit to the commission specifying the efforts that were taken to identify each person whose name and/or address could not be ascertained.

(4) Hearing required for new permits. An application for a new gas storage project permit will be considered for approval only after notice and hearing. The commission will give notice of the hearing to all affected persons, local governments, and other persons who express, in writing, an interest in the application. After hearing, the examiner shall recommend a final action by the commission.

(5) Hearing on permit amendments.

(A) If the commission receives a protest regarding an application for amendment of a gas storage project permit from a person notified pursuant to paragraph (1) of this subsection or from any other affected person within 15 days of the date of receipt of the application by the commission, or of the date of the third publication, whichever is later, or if the commission or its designee determines that a hearing is in the public interest, then the applicant will be notified that the application for amendment cannot be administratively approved. The commission will schedule a hearing on the application upon request of the applicant. The commission will give notice of the hearing to all affected persons, local governments, and other persons who express, in writing, an interest in the application. After hearing, the examiner shall recommend a final action by the commission.

(B) If the commission receives no protest regarding an application for amendment of a gas storage project permit from a person notified pursuant to paragraph (1) of this subsection or from any other affected person, the application may be approved administratively.

(C) If the application for amendment of a gas storage project permit is administratively denied, a hearing will be scheduled upon written request of the applicant. After hearing, the examiner shall recommend a final action by the commission.

(g) Modification, cancellation, or suspension of a permit.

(1) General. A permit may be modified, suspended, or canceled after notice and opportunity for hearing under any of the following circumstances:

(A) a material change in conditions has occurred in the operation of the gas storage project, or there are material deviations from the information originally furnished to the commission. A change in conditions at a facility that does not affect the safe operation of the facility or the ability of the facility to operate without causing waste of hydrocarbons or pollution is not considered to be material;

(B) fresh water is likely to be polluted as a result of the continued operation of the gas storage project;

(C) there are material violations of the terms and provisions of the permit or of applicable commission orders or regulations;

(D) the applicant has misrepresented material facts during the permit issuance process; or

(E) injected fluids are escaping or are likely to escape from the storage project.

(2) Imminent danger. Notwithstanding the provisions of paragraph (1) of this subsection, in the event of an emergency that presents an imminent danger to life or property, or where waste of hydrocarbons, uncontrolled escape of hydrocarbons, or pollution of fresh water is imminent, the commission or its designee may immediately suspend a permit for underground gas storage until a final order is issued pursuant to a hearing, if any, conducted in accordance with the provisions of paragraph (1) of this subsection. All underground gas storage operations shall cease upon suspension of a permit under this paragraph.

(h) Transfer of permit. A gas storage project permit may be transferred from one operator to another operator if both of the following requirements are met.

(1) Notice. Written notice of intended permit transfer is submitted to the commission at least 15 days prior to the date the transfer takes place.

(2) No objection. The commission or its designee does not notify the present permit holder of an objection to the transfer prior to the transfer date stated in the notification in paragraph (1) of this subsection.

(i) Safety requirements for gas storage projects.

(1) Leak detectors.

(A) Within two years of the effective date of this section, leak detectors shall be installed and in operation at each gas storage well that is located 100 yards or less from a residence, commercial establishment, church, school, or small, well-defined outside area, and at each structurally enclosed compressor site. For purposes of this section, the term "small, well-defined outside area" means an area such as a playground, recreation area, outdoor theater, or other place of public assembly that is occupied by 20 or more persons on at least five days a week for 10 weeks in any 12-month period. The days and weeks need not be consecutive.

(B) Each leak detector required under this paragraph shall be tested twice each calendar year at intervals not to exceed 7-1/2 months and, when defective, repaired or replaced within 10 days.

(2) Warning systems. Within two years of the effective date of this section, all leak detectors required in paragraph (1) of this subsection shall be integrated with warning systems that are audible and visible in the control room and at any remote control center. The circuitry shall be designed so that failure of a detector or pressure monitor to function will activate the warning.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.95	**Underground Storage of Liquid or Liquefied Hydrocarbons in Salt Formations**

(a) Definitions. The following terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Affected person--A person who, as a result of actions proposed in an application for a storage facility permit or for amendment or modification of an existing storage facility permit, has suffered or may suffer actual injury or economic damage other than as a member of the general public.

(2) Brine string--The uncemented tubing through which highly saline water flows into or out of a hydrocarbon storage well during hydrocarbon withdrawal or injection operations.

(3) Cavern--The storage space created in a salt formation by solution mining.

(4) Commission--The Railroad Commission of Texas.

(5) Emergency shutdown valve--A valve that automatically closes to isolate a hydrocarbon storage well from surface piping in the event of specified conditions that, if uncontrolled, may cause an emergency.

(6) Fire detector--A device capable of detecting the presence of a flame or the heat from a fire.

(7) Fresh water--Water having bacteriological, physical, and chemical properties that make it suitable and feasible for beneficial use for any lawful purpose. For purposes of this section, brine associated with the creation, operation, and maintenance of an underground hydrocarbon storage facility is not considered fresh water.

(8) Hydrocarbon storage well or storage well--A well used for the injection or withdrawal of liquid or liquefied hydrocarbons into or out of an underground hydrocarbon storage facility.

(9) Leak detector--A device capable of detecting by chemical or physical means the presence of hydrocarbon vapor or the escape of vapor through a small opening.

(10) Liquid or liquefied hydrocarbons--Crude oil and products, derivatives, or by-products of oil or gas that are:

(A) liquid under standard conditions of temperature and pressure;

(B) liquefied under the temperatures and pressures at which they are stored; or

(C) stored under conditions that necessitate the use of displacement fluids to withdraw them from storage.

(11) Operator--The person recognized by the commission as being responsible for the physical operation of an underground hydrocarbon storage facility, or such person's authorized representative.

(12) Owner--The person recognized by the commission as owning all or part of a storage facility, or such

person's authorized representative.

(13) Person--A natural person, corporation, organization, government, governmental subdivision or agency, business trust, estate, trust, partnership, association, or any other legal entity.

(14) Pollution--Alteration of the physical, chemical, or biological quality of, or the contamination of, water that makes it harmful, detrimental, or injurious to humans, animal life, vegetation, or property, or to public health, safety, or welfare, or impairs the usefulness or the public enjoyment of the water for any lawful or reasonable purpose.

(15) Process or transfer area--Any area at an underground hydrocarbon storage facility where hydrocarbons are physically altered by equipment, including dehydrators, compressors, and pumps, or where hydrocarbons are transferred to or from trucks, rail cars, or pipelines.

(16) Underground hydrocarbon storage facility or storage facility--A facility used for the storage of liquid or liquefied hydrocarbons in an underground salt formation, including surface and subsurface rights, appurtenances, and improvements necessary for the operation of the facility.

(b) Permit required.

(1) General. No person may create, operate, or maintain an underground hydrocarbon storage facility without obtaining a permit from the commission. A permit issued by the commission for such activities before the effective date of this section shall continue in effect until revoked, modified, or suspended by the commission, or until it expires by its terms. The provisions of this section apply to permits for underground hydrocarbon storage facility operations issued prior to the effective date of this section, except as specifically provided in this section.

(2) Conflict with other requirements. If a provision of this section conflicts with any provision or term of a commission order, field rule, or permit, the provision of such order, field rule, or permit shall control.

(c) Application.

(1) Information required. An application for a permit to create, operate, or maintain an underground hydrocarbon storage facility shall be filed with the commission by the owner or operator, or proposed owner or operator, on the prescribed form. The application shall contain the information necessary to demonstrate compliance with the applicable state laws and commission regulations.

(2) Permit amendment. An application for amendment of an existing underground hydrocarbon storage facility permit shall be filed with the commission:

(A) prior to any planned enlargement of a cavern in excess of the permitted cavern capacity by solution mining;

(B) when required in accordance with paragraph (3) of this subsection;

(C) prior to the drilling of any additional hydrocarbon storage wells;

(D) prior to any increase in the volume of liquid or liquefied hydrocarbons stored in the cavern in excess of the permitted storage volume; or

(E) any time that conditions at the storage facility deviate materially from conditions specified in the permit or the permit application.

(3) Increase in capacity. The owner or operator of a storage facility shall notify the commission if information indicates that the capacity of a cavern exceeds the permitted cavern capacity by 20% or more. Such notification shall be made in writing to the commission within 10 days of the date that the owner or operator knows or has reason to know that the cavern capacity exceeds the permitted capacity by 20% or more. The notification shall include a description of the information that indicates that the permitted cavern capacity has been exceeded, and an estimate of the current cavern capacity. Upon receipt of such information, the commission or its designee may take any one or more of the following actions:

(A) require the permittee to comply with a compliance schedule that lists measures to be taken to ensure that conditions at the storage facility do not pose a danger to life or property, and that no waste of hydrocarbons, uncontrolled escape of hydrocarbons, or pollution of fresh water occurs;

(B) require the permittee to file an application to amend the underground hydrocarbon storage facility permit;

(C) modify, cancel, or suspend the permit as provided in subsection (f) of this section; or

(D) take enforcement action.

(4) Related activities. An application for a permit to dispose of saltwater or other oil and gas waste arising out of or incidental to the creation, operation, or maintenance of an underground hydrocarbon storage facility shall be filed in accordance with applicable commission requirements.

(d) Standards for underground storage zone.

(1) Impermeable salt formation. An underground hydrocarbon storage facility may be created, operated, or maintained only in an impermeable salt formation in a manner that will prevent waste of the stored hydrocarbons, uncontrolled escape of hydrocarbons, pollution of fresh water, and danger to life or property. Natural gas storage operations are not authorized under the provisions of this section. A permit under §3.97 of this title (relating to Underground Storage of Gas in Salt Formations) is required to convert from storage of liquid or liquefied hydrocarbons to storage of natural gas in an underground salt formation.

(2) Fresh water strata. The applicant must submit with the application a letter from the Texas Commission on Environmental Quality or its successor agencies stating the depth to which fresh water strata occur at each storage facility.

(e) Notice and hearing.

(1) Notice requirements. Such notice shall be given no later than the date the application is mailed to or filed with the commission. The applicant shall give notice of an application for a permit to create, operate, or maintain an underground hydrocarbon storage facility, or to amend an existing storage facility permit, by mailing or delivering a copy of the application form to:

(A) the surface owner of the tract where the storage facility is located or is proposed to be located;

(B) the surface owner of each tract adjoining the tract where the storage facility is located or is proposed to be located;

(C) each oil, gas, or salt leaseholder, other than the applicant, of the tract on which the storage facility is located or is proposed to be located;

(D) each oil, gas, or salt leaseholder of any tract adjoining the tract on which the storage facility is located or is proposed to be located;

(E) the county clerk of the county where the storage facility is located or is proposed to be located; and

(F) if the storage facility is located or proposed to be located within city limits, the city clerk or other appropriate city official.

(2) Publication of notice. Notice of the application, in a form approved by the commission or its designee, shall be published by the applicant once a week for three consecutive weeks in a newspaper of general circulation in the county or counties where the facility is or is proposed to be located. The applicant shall file proof of publication prior to any hearing on the application or administrative approval of the application.

(3) Notice by publication. The applicant shall make diligent efforts to ascertain the name and address of each person identified under paragraph (1)(A) - (D) of this subsection. The exercise of diligent efforts to ascertain the names and addresses of such persons shall require an examination of the county records where the facility is located and an investigation of any other information of which the applicant has actual knowledge. If, after diligent efforts, the applicant has been unable to ascertain the name and address of one or more persons required to be notified under paragraph (1)(A) - (D) of this subsection, the notice requirements for those persons are satisfied by the publication of the notice of application as required in paragraph (2) of this subsection. The applicant must submit an affidavit to the commission specifying the efforts that were taken to identify each person whose name and/or address could not be ascertained.

(4) Hearing required for new permits. A permit application for a new underground hydrocarbon storage facility will be considered for approval only after notice and hearing. The commission will give notice of the hearing to all affected persons, local governments, and other persons who express, in writing, an interest in the application. After hearing, the examiner shall recommend a final action by the commission.

(5) Hearing on permit amendments.

(A) An application for an amendment to an existing storage facility permit may be approved administratively if the commission receives no protest from a person notified pursuant to the provisions of paragraph (1) of this subsection, or from any other affected person.

(B) If the commission receives a protest from a person notified pursuant to paragraph (1) of this subsection or from any other affected person within 15 days of the date of receipt of the application by the commission, or of the date of the third publication, whichever is later, or if the commission determines that a hearing is in the public interest, then the applicant will be notified that the application cannot be approved administratively. The commission will schedule a hearing on the application upon written request of the applicant. The commission will give notice of the hearing to all affected persons, local governments, and other persons who express, in writing, an interest in the application. After hearing, the examiner shall recommend a final action by the commission.

(C) If the application is administratively denied, a hearing will be scheduled upon written request of the applicant. After hearing, the examiner shall recommend a final action by the commission.

(f) Modification, cancellation, or suspension of a permit.

(1) General. Any permit may be modified, suspended, or canceled after notice and opportunity for hearing if:

(A) a material change in conditions has occurred in the operation, maintenance, or construction of the storage facility, or there are material deviations from the information originally furnished to the commission. A change in conditions at a facility that does not affect the safe operation of the facility or the ability of the facility to operate without causing waste of hydrocarbons or pollution is not considered to be material;

(B) fresh water is likely to be polluted as a result of continued operation of the facility;

(C) there are material violations of the terms and provisions of the permit or commission regulations;

(D) the applicant has misrepresented any material facts during the permit issuance process; or

<<Prev Rule Next Rule>>

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.93	**Water Quality Certification Definitions**

(a) The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) 401 certification--A certification issued by the commission, under the authority of the Federal Clean Water Act, §401, that a federal permit that may result in a discharge to waters of the United States is consistent with applicable state and federal water quality laws and regulations.

(2) Commission--The Railroad Commission of Texas or its designee.

(3) Department of the Army permits--Individual or general permits or letters of permission issued by the U.S. Army Corps of Engineers under the authority of the Federal Clean Water Act, §404, or the Rivers and Harbors Act of 1899, §9 and §10, United States Code, Title 33, §402 and §403.

(4) District engineer--The U.S. Army Corps of Engineers representative responsible for administering and enforcing federal laws and regulations, including processing and issuance of permits, under the jurisdiction of the U.S. Army Corps of Engineers.

(5) Federal Clean Water Act--United States Code, Title 33, Chapter 26.

(6) NPDES permit--A permit issued by the regional administrator under the authority of the Federal Clean Water Act, §402, Title 33, United States Code, §1342. NPDES permits can either be individual or general permits.

(7) Permitting agency--Any agency of the federal government to which application is made for any permit to conduct an activity that may result in any discharge into waters of the United States.

(8) Person--A natural person, corporation, organization, government or governmental subdivision or agency, business trust, estate, trust, partnership, association, or any other legal entity.

(9) Pollutant--Any constituent that contaminates or alters the physical, thermal, chemical, or biological quality of water so as to be harmful, detrimental, or injurious to humans, animal life, vegetation, or property or to the public health, safety, or welfare, or that impairs the usefulness or the public enjoyment of the water for any lawful purpose.

(10) Regional administrator--The administrator of the United States Environmental Protection Agency, Region 6.

(11) Water quality standards--Texas Surface Water Quality Standards, Title 30, Texas Administrative Code, Chapter 307.

(12) Waters of the United States--Interstate waters, the territorial seas, and waters that would or could affect interstate commerce, including tributaries of such waters and adjacent wetlands, as defined in Title 33, Code of Federal Regulations, Part 328.

(b) Certification Required. No person may conduct any activity subject to the jurisdiction of the commission pursuant to a Department of the Army permit or an NPDES permit if the activity may result in a discharge into waters of the United States within the boundaries of the State of Texas, unless the commission has first issued a certification or waiver of certification under this section.

(c) Request for Certification. The regional administrator, district engineer, or the permit applicant may submit a request for certification to the commission.

(1) Request by Applicant. If the permit applicant requests certification, the applicant shall submit to the commission:

(A) a copy of the completed permit application and any amendments thereto;

(B) a list on a map or on a separate sheet attached to a map of the names and addresses of owners of tracts of land adjacent to the site where the proposed activity would occur and, where the activity may result in a discharge to watercourse other than the Gulf of Mexico or a bay, the owners of each waterfront tract between the potential discharge point and 1/2 mile downstream of the potential discharge point, except for those waterfront tracts within the corporate limits of an incorporated city, town, or village;

(C) a request for certification; and

(D) for Department of the Army permits in the coastal zone, as described in 31 TAC §503.1 (Coastal Management Program Boundary), a description of the acreage proposed to be filled, if any.

(2) Request by EPA or the Corps. Except as provided in subsection (d)(1) of this section, a request for certification submitted by the regional administrator or the district engineer shall contain the information specified in this paragraph:

(A) a copy of the public notice;

(B) a request for certification;

(C) for NPDES permits, a copy of the draft permit, if available; and

(D) for Department of the Army permits in the coastal zone, as described in 31 TAC §503.1 (Coastal Management Program Boundary), a description of the acreage proposed to be filled, if any.

(3) Request for Additional Information. Where the commission believes more information is required to accomplish review of a request for certification, the commission shall notify the applicant or the permitting agency and request such information. In response to such a notification from the commission, the applicant or the permitting agency shall submit such materials as the commission finds necessary for review of the request for certification. Except as otherwise provided, such information shall be provided within ten days of issuance of a request for additional information by the commission.

(d) Notice of Request for Certification.

(1) Joint Notice. Notice of a request for certification shall be made using a joint mailed notice issued by the U.S. Army Corps of Engineers or the U.S. Environmental Protection Agency after agreements with those agencies have been reached regarding the content of the notice and the persons entitled to notice in Texas. When a joint notice is issued by either the U.S. Army Corps of Engineers or the U.S. Environmental Protection Agency, the requirements of subsection (c) (2) of this section do not apply.

(2) Notice by Applicant. If a joint notice is not used as provided in paragraph (1) of this subsection, the

applicant must mail notice of the request for certification on or before the date the request for certification is filed with the commission. Such notice shall include the information required in paragraph (3) of this subsection. The applicant shall provide notice by first class mail to:

(A) the owners of land adjacent to the tract upon which the activity is proposed to take place, and where the activity may result in a discharge to a watercourse other than the Gulf of Mexico or a bay, the surface owners of each waterfront tract between the potential discharge point and 1/2 mile downstream of the potential discharge point, excluding owners of those waterfront tracts within the corporate limits of an incorporated city, town, or village;

(B) the mayor and health authorities of any city or town in which the proposed activity will be located or that is within 1/2 mile downstream of the potential discharge;

(C) the county judge and health authorities of any county in which the proposed activity will be located or that is within 1/2 mile downstream of the potential discharge;

(D) the Texas Commission on Environmental Quality (TCEQ) or its successor agencies;

(E) the Texas Parks and Wildlife Department;

(F) the U.S. Environmental Protection Agency, Region 6;

(G) the U.S. Fish and Wildlife Service; and

(H) for a proposed activity within the coastal management program boundary as defined under Title 31, Texas Administrative Code §503.1 (Coastal Management Program Boundary), the Secretary of the Coastal Coordination Council.

(3) Contents of Notice. Any notice provided as required in paragraph (2) of this subsection shall contain:

(A) the applicant's name and mailing address, together with the name and mailing address of the party conducting the activity, if different from the applicant;

(B) a brief written description of the activity;

(C) a statement that the applicant is seeking certification from the commission under the Federal Clean Water Act, §401;

(D) a statement that any comments concerning the request for certification may be submitted in writing to the assistant Director of Environmental Services, Railroad Commission, 1701 North Congress Avenue, P.O. Box 12967, Austin, Texas 78711-2967, on or before the deadline for submission of written public comments, which, absent special circumstances, shall be at least 30 days after the date notice is mailed; and

(E) a statement that a copy of the permit application is available for review in the office of the federal permitting agency.

(4) Emergency Actions. When the division engineer for the U.S. Army Corps of Engineers authorizes emergency procedures and it is in the public interest to provide a certification in less than 30 days, the commission may waive the notice and hearing requirements under this section and issue a final determination. For emergency actions within the coastal zone, as described in 31 TAC §503.1 (Coastal Management Program Boundary), the commission may only issue a final determination if the emergency action is consistent with the provisions of 31 TAC §501.14(j)(7) (Policies for Specific Activities and Coastal Natural Resource Areas).

(e) Public Comments.

(1) Written Comments. The commission shall consider all comments related to the water quality impacts of the proposed activity that are submitted to the commission in writing prior to the deadline for submission of comments.

(2) Public Meetings. The commission shall hold a meeting to receive public comment on a request for certification if the commission finds that such a meeting is in the public interest. If the commission holds a meeting to receive public comment on a request for certification, the commission shall notify the applicant by first class mail not less than ten days before the date set for the public meeting that a meeting to receive public comment will be held on the request for certification. The commission will also provide notice by first-class mail or by personal service to all of the persons identified under subsection (d)(2) of this section and the federal permitting agency at least ten days prior to the public meeting. The notice of public meeting shall identify the federal permit application; the date, time, place, and nature of the public meeting; the legal authority and jurisdiction under which the public meeting is to be held; the applicant's proposed action; the requirements for submitting written comments; the method for obtaining additional information; and such other information as the commission deems necessary. The notice to the federal permitting agency shall also estimate the additional time necessary to consider the request for certification and shall state that the commission is not waiving certification.

(f) Commission Review of Requests for Certification. After expiration of the time for receipt of public comments, the commission shall determine whether the proposed activity for which a request for certification has been received will result in any discharge into waters of the United States within the boundaries of the State of Texas, and if so, whether the proposed activity will comply with all applicable water quality requirements. Applicable water quality requirements include, but are not limited to, state water quality standards, and any other applicable water quality requirements. For an activity within the boundary of the Texas Coastal Management Program (CMP), applicable state water quality requirements include the enforceable goals and policies of the CMP, Title 31, Texas Administrative Code, Chapter 501.

(g) Final Action.

(1) Issuance of Final Determination. A final determination on a request for certification of an NPDES or Department of the Army permit shall be issued by the commission within 15 days from the close of the public comment period, unless the regional administrator or the district engineer, in consultation with the commission, finds that unusual circumstances require a longer time. If the commission does not act upon the request for certification within 15 days from the close of the public comment period or within a longer time granted by the regional administrator or the district engineer, the commission will be deemed to have waived certification. Notwithstanding any contrary provisions of this paragraph, in unusual circumstances the commission may elect to delay acting upon a request for certification of an NPDES permit until after a review of the draft permit.

(2) Notification of Final Determination. The commission shall notify the applicant, the regional administrator or district engineer, and any person so requesting of its final determination. Such final determination shall waive, grant, grant conditionally or deny certification. The notification of a final determination shall be in writing and shall include:

(A) the name and address of the applicant;

(B) a statement of conditions that are necessary to ensure compliance with the applicable water quality requirements;

(C) when the state certifies a draft permit instead of a permit application, any condition required to ensure compliance with applicable water quality requirements shall be identified, citing the federal or state law references upon which that condition is based. Failure by the commission to provide such a citation waives its right to certify with respect to that condition;

(D) for NPDES permits, a statement of the extent to which each condition of the draft permit can be made less stringent without the concurrence of the commission; and

Cont'd...

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.91	**Cleanup of Soil Contaminated by a Crude Oil Spill**

(a) Terms. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Free oil--The crude oil that has not been absorbed by the soil and is accessible for removal.

(2) Sensitive areas--These areas are defined by the presence of factors, whether one or more, that make an area vulnerable to pollution from crude oil spills. Factors that are characteristic of sensitive areas include the presence of shallow groundwater or pathways for communication with deeper groundwater; proximity to surface water, including lakes, rivers, streams, dry or flowing creeks, irrigation canals, stock tanks, and wetlands; proximity to natural wildlife refuges or parks; or proximity to commercial or residential areas.

(3) Hydrocarbon condensate--The light hydrocarbon liquids produced in association with natural gas.

(b) Scope. These cleanup standards and procedures apply to the cleanup of soil in non-sensitive areas contaminated by crude oil spills from activities associated with the exploration, development, and production, including transportation, of oil or gas or geothermal resources as defined in §3.8(a)(30) of this title (relating to Water Protection). For the purposes of this section, crude oil does not include hydrocarbon condensate. These standards and procedures do not apply to hydrocarbon condensate spills, crude oil spills in sensitive areas, or crude oil spills that occurred prior to the effective date of this section. Cleanup requirements for hydrocarbon condensate spills and crude oil spills in sensitive areas will be determined on a case-by-case basis. Cleanup requirements for crude oil contamination that occurred wholly or partially prior to the effective date of this section will also be determined on a case-by-case basis. Where cleanup requirements are to be determined on a case-by-case basis, the operator must consult with the appropriate district office on proper cleanup standards and methods, reporting requirements, or other special procedures.

(c) Requirements for cleanup.

(1) Removal of free oil. To minimize the depth of oil penetration, all free oil must be removed immediately for reclamation or disposal.

(2) Delineation. Once all free oil has been removed, the area of contamination must be immediately delineated, both vertically and horizontally. For purposes of this paragraph, the area of contamination means the affected area with more than 1.0% by weight total petroleum hydrocarbons.

(3) Excavation. At a minimum, all soil containing over 1.0% by weight total petroleum hydrocarbons must be brought to the surface for disposal or remediation.

(4) Prevention of stormwater contamination. To prevent stormwater contamination, soil excavated from the spill site containing over 5.0% by weight total petroleum hydrocarbons must immediately be:

(A) mixed in place to 5.0% by weight or less total petroleum hydrocarbons; or

(B) removed to an approved disposal site; or

(C) removed to a secure interim storage location for future remediation or disposal. The secure interim storage location may be on site or off site. The storage location must be designed to prevent pollution from contaminated stormwater runoff. Placing oily soil on plastic and covering it with plastic is one acceptable means to prevent stormwater contamination; however, other methods may be used if adequate to prevent pollution from stormwater runoff.

(d) Remediation of soil.

(1) Final cleanup level. A final cleanup level of 1.0% by weight total petroleum hydrocarbons must be

achieved as soon as technically feasible, but not later than one year after the spill incident. The operator may select any technically sound method that achieves the final result.

(2) Requirements for bioremediation. If on-site bioremediation or enhanced bioremediation is chosen as the remediation method, the soil to be bioremediated must be mixed with ambient or other soil to achieve a uniform mixture that is no more than 18 inches in depth and that contains no more than 5.0% by weight total petroleum hydrocarbons.

(e) Reporting requirements.

(1) Crude oil spills over five barrels. For each spill exceeding five barrels of crude oil, the responsible operator must comply with the notification and reporting requirements of §3.20 of this title (relating to Notification of Fire Breaks, Leaks, or Blow-outs) and submit a report on a Form H-8 to the appropriate district office. The following information must be included:

(A) area (square feet), maximum depth (feet), and volume (cubic yards) of soil contaminated with greater than 1.0% by weight total petroleum hydrocarbons;

(B) a signed statement that all soil containing over 1.0% by weight total petroleum hydrocarbons was brought to the surface for remediation or disposal;

(C) a signed statement that all soil containing over 5.0% by weight total petroleum hydrocarbons has been mixed in place to 5.0% by weight or less total petroleum hydrocarbons or has been removed to an approved disposal site or to a secure interim storage location;

(D) a detailed description of the disposal or remediation method used or planned to be used for cleanup of the site;

(E) the estimated date of completion of site cleanup.

(2) Crude oil spills over 25 barrels. For each spill exceeding 25 barrels of crude oil, in addition to the report required in paragraph (1) of this subsection, the operator must submit to the appropriate district office a final report upon completion of the cleanup of the site. Analyses of samples representative of the spill site must be submitted to verify that the final cleanup concentration has been achieved.

(3) Crude oil spills of five barrels or less. Spills into the soil of five barrels or less of crude oil must be remediated to these standards, but are not required to be reported to the commission. All spills of crude oil into water must be reported to the commission.

(f) Alternatives. Alternatives to the standards and procedures of this section may be approved by the commission for good cause, such as new technology, if the operator has demonstrated to the commission's satisfaction that the alternatives provide equal or greater protection of the environment. A proposed alternative must be submitted in writing and approved by the commission.

Source Note: The provisions of this §3.91 adopted to be effective November 1, 1993, 18 TexReg 6835.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.86	**Horizontal Drainhole Wells**

(a) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Correlative interval--The depth interval designated by the field rules, by new field designation, or, where a correlative interval has not been designated by the commission, by other evidence submitted by the operator showing the producing interval for the field in which the horizontal drainhole is completed.

(2) Horizontal drainhole--That portion of the wellbore drilled in the correlative interval, between the penetration point and the terminus.

(3) Horizontal drainhole displacement--The calculated horizontal displacement of the horizontal drainhole from the penetration point to the terminus.

(4) Horizontal drainhole well--Any well that is developed with one or more horizontal drainholes having a horizontal drainhole displacement of at least 100 feet.

(5) Penetration point--The point where the drainhole penetrates the top of the correlative interval.

(6) Terminus--The farthest point required to be surveyed along the horizontal drainhole from the penetration point and within the correlative interval.

(b) Drainhole spacing.

(1) No point on a horizontal drainhole shall be drilled nearer than 1,200 feet (horizontal displacement), or other between-well spacing requirement under applicable rules for the field, to any point along any other horizontal drainhole in another well, or to any other well completed or drilling in the same field on the same lease, pooled unit, or unitized tract.

(2) No point on a horizontal drainhole shall be drilled nearer than 467 feet, or other lease-line spacing requirement under applicable rules for the field, from any property line, lease line, or subdivision line.

(3) All wells developed with horizontal drainholes shall otherwise comply with Statewide Rule 37, §3.37 of this title (relating to Statewide Spacing Rule), or other applicable spacing rules.

(c) Well densities. All wells developed with horizontal drainholes shall comply with Statewide Rule 38, §3.38 of this title (relating to Well Densities) or other applicable density rules.

(d) Proration and drilling units.

(1) Acreage may be assigned to each horizontal drainhole well for the purpose of allocating allowable oil or gas production up to the amount specified by applicable rules for a proration unit for a vertical well plus the additional acreage assignment as provided in this paragraph.

Attached Graphic

(2) Assignment of acreage to proration and drilling units for horizontal drainhole wells must be done in accordance with Statewide Rule 40, §3.40 of this title (relating to Assignment of Acreage to Pooled Development and Proration Units).

(3) All proration and drilling units shall consist of continuous and contiguous acreage and proration units shall consist of acreage that can be reasonably considered to be productive of oil or gas.

(4) All points on the horizontal drainhole must be within the proration and drilling unit.

(5) The maximum daily allowable for a horizontal drainhole well shall be determined by multiplying the applicable allowable for a vertical well in the field with a proration unit containing the maximum acreage authorized by the applicable rules for the field, exclusive of tolerance acreage, by a fraction:

(A) the numerator of which is the acreage assigned to the horizontal drainhole well for proration purposes; and

(B) the denominator of which is the maximum acreage authorized by the applicable field rules for proration purposes, exclusive of tolerance acreage. The daily oil allowable shall be adjusted in accordance with Statewide Rule 49(a), §3.49(a) of this title (relating to Gas-Oil Ratio), when applicable.

(6) The maximum diagonal for each proration unit containing a horizontal drainhole well shall be the horizontal drainhole displacement of the longest horizontal drainhole for the well plus:

(A) 2,100 feet for fields that are regulated under statewide rules; or

(B) the maximum diagonal allowed for fields where the special field rules specify a maximum diagonal.

(e) Multiple drainholes allowed.

(1) A single well may be developed with more than one horizontal drainhole originating from a single vertical wellbore.

(2) A horizontal drainhole well developed with more than one horizontal drainhole shall be treated as a single well.

(3) The horizontal drainhole displacement used for calculating additional acreage assignment for a well completed with multiple horizontal drainholes shall be the horizontal drainhole displacement of the longest horizontal drainhole plus the projection of any other horizontal drainhole on a line that extends in a 180 degree direction from the longest horizontal drainhole.

(f) Drilling applications and required reports.

(1) Application. Any intent to develop a new or existing well with horizontal drainholes must be indicated on the application to drill. An application for a permit to drill a horizontal drainhole shall include the fees required by Statewide Rule 78, §3.78 of this title (relating to Fees and Financial Security Requirements), and shall be certified by a person acquainted with the facts, stating that all information in the application is true and complete to the best of that person's knowledge.

(2) Drilling unit plat. The application to drill a horizontal drainhole shall be accompanied by a plat.

(A) In addition to the plat requirements provided for in §3.5 of this title (relating to Application to Drill, Deepen, Reenter, or Plug Back) (Statewide Rule 5), the plat shall include:

(i) the lease, pooled unit, or unitized tract, showing the acreage assigned to the drilling unit for the proposed well and the acreage assigned to the drilling units for all current applied for, permitted, or completed oil, gas, or oil and gas wells on the lease, pooled unit, or unitized tract;

(ii) the surface location of the proposed horizontal drainhole well, and the proposed path, penetration points, and terminus locations of all drainholes;

(iii) two perpendicular lines from the nearest point on the lease line, pooled unit line, or any unleased interest in a tract of the pooled unit, depicting the distance(s) to:

(I) the penetration point(s); and

(II) the terminus location(s);

(iv) perpendicular lines providing the distance in feet from the two nearest non-parallel survey lines to the terminus location(s);

(v) a line providing the distance in feet from the closest point along the horizontal course(s) of the drainhole(s) to the nearest point on the lease line, pooled unit line, or unitized tract line. If there is an unleased interest in a tract of the pooled unit that is nearer than the pooled unit line, the nearest point on that unleased tract boundary shall be used; and

(vi) lines from the nearest oil, gas, or oil and gas well, applied for, permitted or completed in the same lease or pooled unit and in the same field and reservoir depicting the distance to:

(I) the penetration point(s);

(II) the closest point along the horizontal course(s) of the drainhole(s); and

(III) the terminus location(s).

(B) An amended drilling permit application and plat shall be filed after completion of the horizontal drainhole well if the commission determines that the drainhole as drilled is not reasonable with respect to the drainhole represented on the plat filed with the drilling permit application.

(3) Directional survey. A directional survey from the surface to the farthest point drilled on the horizontal drainhole shall be required for all horizontal drainholes. The directional survey and accompanying reports shall be conducted and filed in accordance with Statewide Rules 11 and 12, §3.11 and §3.12 of this title (relating to Inclination and Directional Surveys Required and Directional Survey Company Report). No allowable shall be assigned to any horizontal drainhole well until a directional survey and survey plat has been filed with and accepted by the commission.

(4) Proration unit plat. The required proration unit plat must depict the lease, pooled unit, or unitized tract, showing the acreage assigned to the proration unit for the horizontal drainhole well, the acreage assigned to the proration units for all wells on the lease, pooled unit, or unitized tact, and the path, penetration point, and terminus of all drainholes. No allowable shall be assigned to any horizontal drainhole well until the proration unit plat has been filed with and accepted by the commission.

(g) Exceptions and procedure for obtaining exceptions.

(1) The commission may grant exceptions to this section in order to prevent waste, prevent confiscation, or to protect correlative rights.

(2) If a permit to drill a horizontal drainhole requires an exception to this section, the notice and opportunity for hearing procedures for obtaining exceptions to the density provisions prescribed in Statewide Rule 38, §3.38 of this title (relating to Well Densities), shall be followed as set forth in Statewide Rule 38(h), §3.38(h) of this title (relating to Well Densities).

(3) For notice purposes, the commission presumes that for each adjacent tract and each tract nearer to any point along the proposed or existing horizontal drainhole than the prescribed minimum lease-line spacing distance, affected persons include:

(A) the designated operator;

(B) all lessees of record for tracts that have no designated operator; and

(C) all owners of record of unleased mineral interests.

Source Note: The provisions of this §3.86 adopted to be effective June 1, 1990, 15 TexReg 2635; amended to be effective July 10, 2000, 25 TexReg 6487; amended to be effective June 11, 2001, 26 TexReg 4088; amended to be effective September 1, 2004, 29 TexReg 8271

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.85	**Manifest To Accompany Each Transport of Liquid Hydrocarbons by Vehicle**

(a) The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Cargo manifest--One or more documents that together contain the information required by subsection (c) of this section. That part of a manifest which contains information unique to the particular transport being described (such as date and time of removal) must be part of a book, tablet, or series, wherein the documents are sequentially numbered.

(2) Commission--The Railroad Commission of Texas.

(3) Facility--Any place used to store, process, refine, reclaim, dispose of, or treat liquid hydrocarbons.

(4) Lease--A well producing oil, gas, or oil and gas, and any group of contiguous wells producing oil, gas, or oil and gas of any number operated as a producing unit.

(5) Liquid hydrocarbons--Unrefined oil or condensate, and refined oil or condensate to be blended with unrefined liquid hydrocarbons.

(6) Oil tanker vehicle--A motor vehicle licensed for highway use on a public highway or used on a public highway:

(A) that is equipped with, carrying, pulling, or otherwise transporting an assembly, compartment, tank, or other container that is used for transporting, hauling, or delivering liquids; and

(B) that is being used to transport liquid hydrocarbons on a public highway.

(7) Public highway--A way or place of whatever nature open to the use of the public as a matter of right for the purpose of vehicular travel, even if the way or place is temporarily closed for the purpose of construction, maintenance, or repair.

(8) Transporter--Each gatherer, storer, or other handler of liquid hydrocarbons who moves or transports those liquid hydrocarbons by truck or other motor vehicle, provided however, that the provisions of this rule do not apply to:

(A) common carriers as defined in the Natural Resources Code, Chapter 111; or

(B) the movement of salt water, brine, sludge, drilling mud, or other liquid or semiliquid material if the commission has authorized the entity to move such material and such material contains less than 7.0% liquid hydrocarbon, by volume, or if not authorized by the commission, the movement is not for hire and the material moved does not contain more than 7.0% liquid hydrocarbons by volume.

(b) A cargo manifest must be carried in each oil tanker vehicle transporting liquid hydrocarbons on a public highway in this state and must be presented on request for inspection as provided by subsection (f) of this section.

(c) For each load of liquid hydrocarbons loaded onto and transported by an oil tanker vehicle, the cargo manifest must include:

(1) an identification of the lease or facility from which the liquid hydrocarbons were removed, which must include:

(A) the lease or facility name; and

(B) the name of the operator of the lease or facility;

(2) the total quantity of liquid hydrocarbons removed from the lease or facility and loaded onto the oil tanker vehicle; provided that for purposes of indicating quantity on the copy of the manifest left with the lease operator, top and bottom gauges will suffice. On the other copies, an estimate in barrels must be included;

(3) the date and hour when the liquid hydrocarbons were removed from the lease or facility and loaded onto the oil tanker vehicle;

(4) the identity of the transporter which must include;

(A) the company or individual transporter's name and address;

(B) the oil tanker vehicle driver's name; and

(C) a unique number for the oil tanker vehicle that for a truck tractor and semitrailer type oil tanker vehicle must include unique vehicle numbers for both truck tractor and semitrailer; and

(5) the intended point of destination for the liquid hydrocarbons, including the name of the receiving facility.

(d) Copy of manifest to be left at the lease.

(1) A copy of the cargo manifest must be left at the lease or facility from which the liquid hydrocarbons were removed or delivered to the lease or facility operator, his agent, or his representative.

(2) The requirements of this section may be met by leaving a separate document at the lease or facility from which the liquid hydrocarbons were removed or by delivering to the lease or facility operator a separate document that includes information required under subsection (c)(1)-(3) and (4)(A) and (B) this section.

(3) If more than one load of liquid hydrocarbons is removed from a single tank or other container of liquid hydrocarbons within a period of 24 consecutive hours, subsection (c)(2) and (3) of this section may be met for purposes of this section by a separate document that includes:

(A) the total quantity of liquid hydrocarbons removed;

(B) the date and hour the first load was removed; and

(C) the date and hour the last load was removed.

(4) If the operator of a facility requires that a transporter leave at the facility or deliver to the operator a

document other than the transporter's cargo manifest, a transporter may meet the requirements of this section by leaving those specified documents at an agreed location or delivering the document to the operator.

(e) After the delivery of all liquid hydrocarbons in an oil tanker vehicle is completed, the cargo manifest must be maintained in the records of the transporter for a period of not less than two years from the date the liquid hydrocarbons are removed from the oil tanker vehicle.

(f) Upon request from a commission agent or other law enforcement official the transporter must produce the cargo manifest for inspection immediately, whether it is on an oil tanker vehicle or in the records of the transporter. Copies of cargo manifests must be filed with the commission, upon request from the commission.

(g) Companies or individuals who do not have organization reports (Form P-5) on file with the Railroad Commission, as required by §3.1 of this title (relating to Organization Report; Retention of Records; Notice Requirement (commonly referred to as Statewide Rule 1)), may not issue cargo manifests.

(h) Every truck or other vehicle covered by this section shall bear on both sides thereof the name of the company or individual responsible for such transportation, the number of the vehicle, and the number of the certificate or permit authorizing the service. In the case of vehicles not for hire, this number shall be the company's organizational report (P-5) number. The identifying signs shall be printed in letters not less than two inches in height, in sharp color contrast to the background, and shall be plainly legible for a distance of at least 50 feet.

Source Note: The provisions of this §3.85 adopted to be effective August 25, 2003, 28 TexReg 6816

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.84	**Gas Shortage Emergency Response**

(a) The purpose of this section is to provide a means for a producer or purchaser to increase production and takes from wells in a field in response to an increase in demand caused by unforeseen events. This section outlines the commission's mechanisms for both determining that a gas shortage emergency exists, and responding to a gas shortage emergency.

(b) The commission may, after notice and hearing, determine that a gas shortage emergency exists or has existed. The commission may also determine the duration of the emergency at such hearing. The commission shall issue notice when it has determined that a gas shortage emergency exists, or has existed, and when it determines the gas shortage emergency has ended or will end. In determining whether a gas shortage emergency exists or has existed, the commission shall consider any relevant information, including, but not limited to, the following:

(1) notification from gas storage facilities that they are attaining maximum gas withdrawal rates;

(2) notification from a gas utility, distributor, transporter, producer or purchaser that gas shortages have occurred or are anticipated; and

(3) weather data.

(c) Upon the commission's finding that a gas shortage emergency exists, or has existed, producers or purchasers shall be authorized to meet the increased demand for the duration of the gas shortage emergency as determined by the commission regardless of a well's assigned allowable or allowable status.

(d) If inequities occur as a result of production authorized by subsection (c) of this section, an adjustment shall be made at the hearing in which production reported for the month of the gas shortage emergency is considered in setting future allowables. Such adjustment shall include the assignment of additional allowable to adequately protect correlative rights. The commission may determine the maximum amount of the supplemental allowable by multiplying the number of days of the gas shortage emergency period by the difference between the well's capability (as defined in §3.31 of this title (relating to Gas Reservoirs and Gas Well Allowable)) and the assigned allowable.

Source Note: The provisions of this §3.84 adopted to be effective September 13, 1994, 19 TexReg 6853; amended to be effective November 24, 2004, 29 TexReg 10728

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.83	**Tax Exemption for Two-Year Inactive Wells and Three-Year Inactive Wells**

(a) Purpose. The purpose of this section is to provide a procedure by which an operator can obtain commission certification of a wellbore as a two-year inactive well or three-year inactive well in order to qualify for the tax exemptions provided for in the Tax Code, §§201.053, 202.052, and 202.056.

(b) Definitions.

(1) Two-year inactive well--A well that has not produced any hydrocarbons in more than one calendar month in the two years prior to the date of certification by the Commission under this section.

(2) Three-year inactive well--A well that has not produced any hydrocarbons in more than one calendar month in the three years prior to the date of certification by the commission under this section.

(3) Eligible well--Wells eligible under this section include those that:

(A) were previous producing or injection wells that have not been plugged or abandoned; or

(B) have been plugged and abandoned; or

(C) are active injection wells.

(4) Well--A wellbore with single or multiple completions.

(c) Certification. The commission or its delegate may certify a well as a two-year inactive well or a three-year inactive well. If the commission or its delegate declines to certify a well administratively, the operator affected by this action may request a hearing.

(d) Revocation of Certification. Certification of a two-year inactive well or a three-year inactive well may be revoked by the commission for cause which includes, but is not limited to, receipt of information by the commission that a certified well produced hydrocarbons in more than one calendar month in the applicable two or three years prior to certification, or if production from other wells is credited to the two-year inactive well or the three-year inactive well, or if a certified well is reported to the commission to be capable of production but is not capable of production. The Comptroller of Public Accounts will be notified of any revocation.

(e) Certified Wells.

(1) Three-year inactive wells. The commission may not certify a three-year inactive well under this section after February 29, 1996. Prior to applying to the Comptroller of Public Accounts for the tax incentives listed in subsection (a) of this section, the operator of a three-year inactive certified well shall file with the commission a test report showing productive capability for the well. Production is presumed to begin on this well test date. The certification remains with the well in the event of a change of operator or ownership.

(2) Two-year inactive wells. The commission may not designate a two-year inactive well under this section

after February 28, 2010. An application for two-year inactive well certification shall be made during the period of September 1, 1997, through August 31, 2009, to qualify for the tax exemption. Certification will be issued upon the filing of a test report showing the well's capability and an approval of application for certification. Production is presumed to begin on the well test date as reported on the appropriate report. The certification shall remain with the well in the event of a change of operator or ownership.

Source Note: The provisions of this §3.83 adopted to be effective November 23, 1993, 18 TexReg 8195; amended to be effective January 10, 1996, 20 TexReg 11119; amended to be effective July 21, 1998, 23 TexReg 7363; amended to be effective September 10, 2001, 26 TexReg 6869

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.81	**Brine Mining Injection Wells**

(a) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Affected person--A person who, as a result of the activity sought to be permitted, has suffered or may suffer actual injury or economic damage other than as a member of the general public.

(2) Brine mining facility or facility--The brine mining injection well, and the pits, tanks, fresh water wells, pumps, and other structures and equipment that are or will be used in conjunction with the brine mining injection well.

(3) Brine mining injection well--A well used to inject fluid for the purpose of extracting brine by the solution of a subsurface salt formation. The term "brine mining injection well" does not include a well used to inject fluid for the purpose of leaching a cavern for the underground storage of hydrocarbons or the disposal of waste, or a well used to inject fluid for the purpose of extracting sulphur by the thermofluid mining process.

(4) Commission--The Railroad Commission of Texas.

(5) Director--The director of the Oil and Gas Division or a staff delegate designated in writing by the director of the Oil and Gas Division or the commission.

(6) Existing brine mining injection well--A brine mining injection well in which injection operations began prior to the effective date of this section.

(7) Fresh water--Water having bacteriological, physical, and chemical properties that make it suitable and feasible for beneficial use for any lawful purpose.

(8) New brine mining injection well--A brine mining injection well in which injection operations begin on or after the effective date of this section.

(9) Permit--A written authorization issued by the commission under this section for the operation of a brine mining injection well.

(10) Person--A natural person, corporation, organization, government or governmental subdivision or agency, business trust, estate, trust partnership, association, or any other legal entity.

(11) Pollution--The alteration of the physical, chemical, or biological quality of, or the contamination of, water that makes it harmful, detrimental, or injurious to humans, animal life, vegetation or property or to public health, safety, or welfare, or impairs the usefulness or the public enjoyment of the water for any lawful purpose.

(b) Prohibitions.

(1) Unauthorized injection. No person may operate a brine mining injection well without obtaining a

permit from the commission under this section. No person may begin constructing a new brine mining injection well until the commission has issued a permit to operate the well under this section and a permit to drill, deepen, plug back, or reenter the well under §3.5 of this title (relating to Application to Drill, Deepen, Reenter, or Plug Back) (Statewide Rule 5).

(2) Fluid migration. No person may operate a brine mining injection well in a manner that allow fluids to escape from the permitted injection zone. If fluids are migrating from the permitted injection zone, the operator shall immediately cease injection operations.

(3) Falsifying documents and tampering with gauges. No person may knowingly make any false statement, representation, or certification in any application, report, record, or other document submitted or required to be maintained under this section or under any permit issued pursuant to this section, or falsify, tamper with, or knowingly render inaccurate any monitoring device or method required to be maintained under this section or under any permit issued pursuant to this section.

(c) Standards for permit issuance. A permit may be issued only if the commission determines that the operation of the brine mining injection well will not result in the pollution of fresh water. All permits issued under this section will contain the conditions required by subsections (f) and (g) of this section, and all other conditions reasonably necessary to prevent the pollution of fresh water.

(d) Permit application.

(1) Duty to apply. Any person who operates or proposes to operate a brine mining injection well shall file a permit application with the commission in Austin within the time provided in paragraph (2) of this subsection. The applicant shall mail or deliver a copy of the application to the appropriate district office on the same day the application is mailed or delivered to the commission in Austin. A permit application will be considered filed with the commission on the date it is received by the commission in Austin.

(2) Time to apply.

(A) Any person who proposes to operate a new brine mining injection well shall file a permit application at least 180 days before the date on which injection is to begin, unless a later date has been authorized by the director.

(B) Any person who is operating an existing brine injection well shall file a permit application within 90 days of the effective date of this section.

(C) Any person who has obtained a permit under this section and who wishes to continue to operate the brine mining injection well after the permit expires shall file an application for new permit at least 180 days before the existing permit expires, unless a later date has been authorized by the director.

(3) Who applies. When a brine mining facility is owned by one person but is operated by another person, it is the operator's duty to file an application for a permit.

(4) Application requirements for all applicants. All applicants shall submit the following information, using application forms supplied by the commission:

(A) name, mailing address, and location of the brine mining facility for which the application is submitted;

(B) the operator's name, mailing address, telephone number, and status as federal, state, private, public, or other entity, and a statement indicating whether the operator is the owner of the facility;

(C) the proposed uses for the brine mined at the facility;

(D) a listing of all permits or construction approvals for the facility received or applied for under federal or state environmental programs;

(E) a topographic map, or other map if the topographic map is unavailable, extending one mile beyond the property boundaries of the facility, depicting the facility and those springs, other surface water bodies, drinking water wells, and other wells listed in public records or otherwise known to the applicant within 1/4 mile of the facility property boundary;

(F) a plat showing the oil and gas operators of the tract on which the facility is located and the tracts adjacent to the tract on which the facility is located. On the plat or on a separate sheet attached to the plat, the applicant shall list the names and addresses of the oil and gas operators;

(G) a plat showing the surface ownership of the tract on which the facility is located and the tracts adjacent to the tract on which the facility is located. On the plat or on a separate sheet attached to the plat, the applicant shall list the names and addresses of the surface owners, as determined from the current county tax rolls or other reliable sources, and shall identify the source of the list. If the director determines that, after diligent efforts, the applicant has been unable to ascertain the name and address of one or more surface owners, the director may waive the requirements of this subparagraph with respect to those surface owners;

(H) a map with surveys marked showing the type, location, and depth of all wells of public record within a 1/4 mile radius of the brine mining injection well that penetrate the salt formation. The applicant shall attach the following information to the map:

(i) a tabulation of the wells showing the dates the wells were drilled and the present status of the wells; and

(ii) plugging records for plugged and abandoned wells and completion records for other wells;

(I) a letter from the Texas Commission on Environmental Quality stating the depth to which fresh water strata should be protected;

(J) a complete electric log of the brine mining injection well or a nearby well. On the log, the applicant shall identify the geologic formations between the land surface and the top of the salt formation and the depths at which they occur;

(K) a drawing of the surface and subsurface construction details of the brine mining injection well;

(L) the proposed maximum daily injection rate and maximum injection pressure;

(M) the proposed injection procedure;

(N) the proposed mechanical integrity testing procedure;

(O) the source of mining water to be used at the facility. If the source is groundwater, the following information must be included:

(i) the groundwater formation name;

(ii) an depth of the groundwater formation; and

(iii) an analysis of the groundwater;

(P) the direction of the hydraulic gradient in the area; and

(Q) the proposed groundwater monitoring plan, or an alternate plan for assuring that fluids are not escaping from the permitted injection zone.

(5) Additional information. The applicant shall submit any other information required on the application form supplied by the commission. In addition to the information reported on the application form, the applicant shall submit, at the director's request, any other information the commission may reasonably require to assess the brine mining injection well and to determine whether to issue a permit.

(e) Signatories to applications and reports.

(1) Applications. All applications shall be signed as follows:

(A) for a corporation, by a responsible corporate officer. A responsible corporate officer means a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy-making or decision-making functions for the corporation; or

(B) for a partnership or sole proprietorship, by a general partner or the proprietor, respectively.

(2) Reports. All reports required by permits and other information requested by the commission shall be signed by a person described in paragraph (1) of this subsection or by a duly authorized representative of that person. A person is a duly authorized representative only if:

(A) the authorization is made in writing by a person described in paragraph (1) of this subsection;

(B) the authorization specifies an individual or position having responsibility for the overall operation of the regulated facility; and

(C) the authorization is submitted to the commission before or together with any report of information signed by the authorized representative.

(3) Certification. Any person signing a document under paragraph (1) or (2) of this subsection shall make the following certification: "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or who are directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information."

(f) Conditions applicable to all permits. The conditions specified in this subsection apply to all permits.

(1) Duty to comply. The operator shall comply with all conditions of the permit. Any permit noncompliance is grounds for enforcement action, for permit termination, revocation and reissuance, or modification, or for denial of a permit renewal application.

(2) Duty to reapply. If the operator wishes to continue a permitted activity after the expiration date of the permit, the operator shall apply for and obtain a new permit.

(3) Need to halt or reduce activity not a defense. It is not a defense for an operator in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit.

(4) Duty to mitigate. The operator shall take all reasonable steps to minimize and correct any adverse effect on the environment resulting from noncompliance with the permit.

(5) Proper operation and maintenance. The operator shall at all times properly operate and maintain all facilities and systems of treatment and control, and related appurtenances, that are installed or used by the operator to achieve compliance with the conditions of the permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up and auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit.

(6) Permit actions. The permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the operator for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.80	**Commission Oil and Gas Forms, Applications, and Filing Requirements**

(a) Forms. Forms required to be filed at the Commission shall be those prescribed by the Commission as listed in Table 1 of this subsection. A complete set of all Commission forms listed on Table 1 required to be filed at the Commission shall be kept by the Commission secretary and posted on the Commission's web site. Notice of any new or amended forms shall be issued by the Commission. For any required or discretionary filing, an organization may either file the prescribed form on paper or use any electronic filing process in accordance with subsections (e) or (f) of this section, as applicable. The Commission may at its discretion accept an earlier version of a prescribed form, provided that it contains all required information and meets the requirements of subsection (e)(3) of this section.

Attached Graphic

(b) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Commission--The Railroad Commission of Texas.

(2) Electronic filing process--An electronic transmission to the Commission in a prescribed form and/or format authorized by the Commission and completed in accordance with Commission instructions.

(3) Form--A printed or typed paper document or electronic submission, including any necessary instructions, with blank spaces for insertion of required or requested specific information.

(4) Organization--Any person, firm, partnership, joint stock association, corporation, or other organization, domestic or foreign, operating wholly or partially within this state, acting as principal or agent for another, for the purpose of performing operations within the jurisdiction of the Commission.

(5) Position of ownership or control--A person holds a position of ownership or control in an organization if the person is:

(A) an officer or director of the organization;

(B) a general partner of the organization;

(C) the owner of an organization which is a sole proprietorship;

(D) the owner of more than a 25 percent ownership interest in the organization; or

(E) the designated trustee of the organization.

(6) Violation--Non-compliance with a statute, Commission rule, order, license, permit, or certificate relating to safety or the prevention or control of pollution.

(c) Organization eligibility. The Commission may not accept an organization report or an application for a permit, or approve a certificate of compliance if:

(1) the organization that submitted the report, application, or certificate violated a statute or Commission rule, order, license, certificate, or permit that relates to safety or the prevention or control of pollution; or

(2) any person who holds a position of ownership or control in the organization has, within the seven years preceding the date on which the report, application, or certificate is filed, held a position of ownership or control in another organization, and during that period of ownership or control the other organization violated a statute or Commission rule, order, license, permit, or certificate that relates to safety or the prevention or control of pollution.

(d) Violations. An organization has committed a violation if there is either a Commission order against an organization finding that the organization has committed a violation and all appeals have been exhausted or an agreed order entered into by the Commission and an organization relating to an alleged violation, and:

(1) the conditions that constituted the violation or alleged violation have not been corrected;

(2) all administrative, civil and criminal penalties, if any, relating to the violation or agreed settlement relating to an alleged violation have not been paid; or

(3) all reimbursements of costs and expenses, if any, assessed by the Commission relating to the violation or to the alleged violation have not been collected.

(e) Authorization and standards for electronic filing.

(1) An organization may file electronically any form listed on Table 1 for which the Commission has provided an electronic version, provided that the organization pays all required filing fees and complies with all requirements, including but not limited to security procedures, for electronic filing.

(2) The Commission deems an organization that files electronically or on whose behalf is filed electronically any form, as of the time of filing, to have knowledge of and to be responsible for the information filed on the form, pursuant to the statutory requirements, restrictions, and standards found in and pertaining to:

(A) Texas Natural Resources Code, Title 3 (oil and gas well drilling, production, and plugging);

(B) Texas Natural Resources Code, Title 5 (geothermal resources);

(C) Texas Natural Resources Code, Title 11 (hazardous liquids storage);

(D) Texas Utilities Code, Chapter 121, Subchapter I (sour gas pipeline facilities);

(E) Texas Water Code, §26.131 (discharge permits);

(F) Texas Water Code, Chapter 27 (class II injection and disposal wells and class III brine mining wells);

(G) Texas Water Code, Chapter 29 (oil and gas waste haulers);

(H) Texas Health and Safety Code, §401.415 (oil and gas naturally occurring radioactive material (NORM) waste); and

(I) Texas Administrative Code, Title 16, Chapter 3 (Oil and Gas Division) and Chapter 4 (Environmental Protection).

(3) All forms that an organization submits or that are submitted on behalf of an organization shall be transmitted in the manner prescribed by the Commission that is compatible with its software, equipment, and facilities.

(4) The Commission may provide notice electronically to an organization of, and may provide an organization the ability to confirm electronically, the Commission's receipt of a form submitted electronically by or on behalf of that organization.

(5) The Commission deems that the signature of an organization's authorized representative appears on each form submitted electronically by or on behalf of the organization, as if this signature actually appears, as of the time the form is submitted electronically to the Commission.

(6) The Commission holds each organization responsible, under the penalties prescribed in Texas Natural Resources Code, §91.143, for all forms, information, or data that an organization files or that are filed on its behalf. The Commission charges each organization with the obligation to review and correct, if necessary, all forms or data that an organization files or that are filed on its behalf.

(f) Other electronic transmissions. The Commission may at its discretion accept other documents or data electronically transmitted.

Source Note: The provisions of this §3.80 adopted to be effective June 11, 2001, 26 TexReg 4088; amended to be effective April 12, 2004, 29 TexReg 3612; amended to be effective July 12, 2004, 29 TexReg 6633; amended to be effective October 11, 2004, 29 TexReg 9533

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.79	**Definitions**

The following words and terms, when used in this chapter, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Adjacent estuarine zones--This term embraces the area inland from the coast line of Texas and is comprised of the bays, inlets, and estuaries along the gulf coast.

(2) By-product--Any element found in a geothermal formation which when brought to the surface is not used in geothermal heat or pressure inducing energy generation.

(3) Casinghead gas--Any gas or vapor, or both, indigenous to an oil stratum and produced from such stratum with oil.

(4) Commission--The Railroad Commission of Texas.

(5) Common reservoir--Any oil, gas, or geothermal resources field or part thereof which comprises and includes any area which is underlaid, or which from geological or other scientific data or experiments or from drilling operations or other evidence appears to be underlaid by a common pool or accumulation of oil, gas, or geothermal resources.

(6) Cubic foot of gas or standard cubic foot of gas--The volume of gas contained in one cubic foot of space at a standard pressure base and at a standard temperature base. The standard pressure base shall be 14.65 pounds per square inch absolute, and the standard temperature base shall be 60 degrees Fahrenheit. Whenever the conditions of pressure and temperature differ from the standard in this definition, conversion of the volume from these conditions to the standard conditions shall be made in accordance with the ideal gas laws, corrected for deviation.

(7) District office--The commission-designated office for the geographic area in which the property or act subject to regulation is located or arises.

(8) Dry gas--Any natural gas produced from a stratum that does not produce crude petroleum oil.

(9) Exploratory well--Any well drilled for the purpose of securing geological or geophysical information to be used in the exploration or development of oil, gas, geothermal, or other mineral resources, except coal and uranium, and includes what is commonly referred to in the industry as "slim hole tests," "core hole tests," or "seismic holes." For regulations governing coal exploratory wells, see Chapter 12 of this title (relating to Coal Mining Regulations), and for regulations governing uranium exploratory wells, see Chapter 11, Subchapter C of this title (relating to Surface Mining and Reclamation Division, Substantive Rules--Uranium Mining).

(10) Gas lift--Gas lift by the use of gas not in solution with oil produced.

(11) Gas well--Any well:

(A) which produces natural gas not associated or blended with crude petroleum oil at the time of production;

(B) which produces more than 100,000 cubic feet of natural gas to each barrel of crude petroleum oil from the same producing horizon; or

(C) which produces natural gas from a formation or producing horizon productive of gas only encountered in a wellbore through which crude petroleum oil also is produced through the inside of another string of casing or tubing. A well which produces hydrocarbon liquids, a part of which is formed by a condensation from a gas phase and a part of which is crude petroleum oil, shall be classified as a gas well unless there is produced one barrel or more of crude petroleum oil per 100,000 cubic feet of natural gas; and that the term "crude petroleum oil" shall not be construed to mean any liquid hydrocarbon mixture or portion thereof which is not in the liquid phase in the reservoir, removed from the reservoir in such liquid phase, and obtained at the surface as such.

(12) Gatherer--Includes any pipeline, truck, motor vehicle, boat, barge, or person authorized to gather or accept oil, gas, or geothermal resources from lease production or lease storage.

(13) Geothermal energy and associated resources--

(A) All products of geothermal processes, embracing indigenous steam, hot water and hot brines, and geopressured water;

(B) Steam and other gases, hot water and hot brines resulting from water, gas, or other fluids artificially introduced into geothermal formations;

(C) Heat or other associated energy found in geothermal formations;

(D) Any by-product derived from them.

(14) Geothermal resource well--A well drilled within the established limits of a designated geothermal field.

(A) A geopressured geothermal well must be completed within a geopressured aquifer.

(B) A geopressured aquifer is a water-bearing zone with a pressure gradient in excess of 0.5 pounds per square inch per foot and a temperature gradient in excess of 1.6 degrees Fahrenheit per 100 feet of depth.

(15) Marginal well--Any oil well which is incapable of producing its maximum capacity of oil except by pumping, gas lift, or other means of artificial lift, and which well so equipped is capable, under normal unrestricted operating conditions, of producing such daily quantities of oil as herein set out, as would be damaged, or result in a loss of production ultimately recoverable, or cause the premature abandonment of same, if its maximum daily production were artificially curtailed. The following described wells shall be deemed "marginal wells" in this state.

(A) Any oil well incapable of producing its maximum daily capacity of oil except by pumping, gas lift, or other means of artificial lift, within this state and having a maximum daily capacity for production of 10 barrels or less, averaged over the preceding 10 consecutive days of stabilized production, producing from a depth of 2,000 feet or less.

(B) Any oil well incapable of producing its maximum daily capacity of oil except by pumping, gas lift, or other means of artificial lift, within this state and having a maximum daily capacity for production of 20 barrels or less, averaged over the preceding 10 consecutive days of stabilized production, producing from a horizon deeper than 2,000 feet and less in depth than 4,000 feet.

(C) Any oil well incapable of producing its maximum daily capacity of oil except by pumping, gas lift, or other means of artificial lift, within this state and having a maximum daily capacity for production of 25 barrels or less, averaged over the preceding 10 consecutive days of stabilized production, producing from a horizon deeper than 4,000 feet and less in depth than 6,000 feet.

(D) Any oil well incapable of producing its maximum daily capacity of oil except by pumping, gas lift, or other means of artificial lift, within this state and having a maximum daily capacity for production of 30 barrels or less, averaged over the preceding 10 consecutive days of stabilized production, producing from a horizon deeper than 6,000 feet and less in depth than 8,000 feet.

(E) Any oil well incapable of producing its maximum daily capacity of oil except by pumping, gas lift, or other means of artificial lift, within this state and having a maximum daily capacity for production of 35 barrels or less, averaged over the preceding 10 consecutive days of stabilized production, producing from a horizon deeper than 8,000 feet. (Reference Order Number 20-59,200, effective May 1, 1969.)

(16) Natural gas or gas--These terms shall have the same meaning, as used in the rules, regulations, or forms of the commission.

(17) Natural gasoline--Gasoline manufactured from casinghead gas or from any natural gas.

(18) Oil well--Any well which produces one barrel or more crude petroleum oil to each 100,000 cubic feet of natural gas.

(19) Operator--A person, acting for himself or as an agent for others and designated to the commission as the one who has the primary responsibility for complying with its rules and regulations in any and all acts subject to the jurisdiction of the commission.

(20) Person--Any natural person, corporation, association, partnership, receiver, trustee, guardian, executor, administrator, and a fiduciary or representative of any kind.

(21) Product--Includes refined crude oil, crude tops, topped crude, processed crude petroleum, residue from crude petroleum, cracking stock, uncracked fuel oil, fuel oil, treated crude oil, residuum, casinghead gasoline, natural gas gasoline, gas oil, naphtha, distillate, gasoline, kerosene, benzine, wash oil, waste oil, blended gasoline, lubricating oil, blends or mixtures of petroleum, and/or any and all liquid products or by-products derived from crude petroleum oil or gas, whether hereinabove enumerated or not.

(22) Sour gas--Any natural gas containing more than 1 1/2 grains of hydrogen sulphide per 100 cubic feet or more than 30 grains of total sulphur per 100 cubic feet, or gas which in its natural state is found by the commission to be unfit for use in generating light or fuel for domestic purposes.

(23) Sweet gas--All natural gas except sour gas and casinghead gas.

(24) Texas offshore--This term embraces the area in the Gulf of Mexico seaward of the coast line of Texas comprised of:

(A) the three league area confirmed to the State of Texas by the Submerged Land Act (43 United States Code §§1301-1315); and

(B) the area seaward of such three league area owned by the United States.

(25) Transportation or to transport--The movement of any crude petroleum oil or products of crude

petroleum oil or the products of either from any receptacle in which any such crude petroleum or products of crude petroleum oil or the products of either has been stored to any other receptacle by any means or method whatsoever, including the movement by any pipeline, railway, truck, motor vehicle, barge, boat, or railway tank car. It is the purpose of this definition to include the movement or transportation of crude petroleum oil and products of crude petroleum oil and the products of either by any means whatsoever from any receptacle containing the same to any other receptacle anywhere within or from the State of Texas, regardless of whether or not possession or control or ownership change.

(26) Transporter or transporting agency--Includes any common carrier by pipeline, railway, truck, motor vehicle, boat, or barge, and/or any person transporting oil or a product by pipeline, railway, truck, motor vehicle, boat, or barge.

Source Note: The provisions of this §3.79 adopted to be effective August 25, 2003, 28 TexReg 6816

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.78	**Fees and Financial Security Requirements**

(a) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise:

(1) Violation--Noncompliance with a Commission rule, order, license, permit, or certificate relating to safety or the prevention or control of pollution.

(2) Outstanding violation--A violation for which:

(A) either:

(i) a Commission order finding a violation has been entered and all appeals have been exhausted; or

(ii) an agreed order between the Commission and the organization relating to a violation has been entered; and

(B) one or more of the following conditions still exist:

(i) the conditions that constituted the violation have not been corrected;

(ii) all administrative, civil, and criminal penalties, if any, relating to the violation of such Commission rules, orders, licenses, permits, or certificates have not been paid; or

(iii) all reimbursements of any costs and expenses assessed by the Commission relating to the violation of such Commission rules, orders, licenses, permits, or certificates have not been paid.

(3) Commercial facility--A facility whose owner or operator receives compensation from others for the storage, reclamation, treatment, or disposal of oil field fluids or oil and gas wastes that are wholly or partially trucked or hauled to the facility and whose primary business purpose is to provide these services for compensation if:

(A) the facility is permitted under §3.8 of this title (relating to Water Protection);

(B) the facility is permitted under §3.57 of this title (relating to Reclaiming Tank Bottoms, Other Hydrocarbon Wastes, and Other Waste Materials);

(C) the facility is permitted under §3.9 of this title (relating to Disposal Wells) and a collecting pit permitted under §3.8 is located at the facility; or

(D) the facility is permitted under §3.46 of this title (relating to Fluid Injection into Productive Reservoirs) and a collecting pit permitted under §3.8 is located at the facility.

(4) Financial security--An individual performance bond, blanket performance bond, letter of credit, or cash deposit filed with the Commission.

(5) Bay well--Any well under the jurisdiction of the Commission for which the surface location is either:

(A) located in or on a lake, river, stream, canal, estuary, bayou, or other inland navigable waters of the state and which requires plugging by means other than conventional land-based methods, including, but not limited to, use of a barge, use of a boat, dredging, or building a causeway or other access road to bring in the necessary equipment to plug the well; or,

(B) located on state lands seaward of the mean high tide line of the Gulf of Mexico in water of a depth at mean high tide of not more than 100 feet that is sheltered from the direct action of the open seas of the Gulf of Mexico.

(6) Land well--Any well subject to Commission jurisdiction for which the surface location is not in or on inland or coastal waters.

(7) Offshore well--Any well subject to Commission jurisdiction for which the surface location is on state lands in or on the Gulf of Mexico, that is not a bay well.

(8) Officers and owners--Any persons owning or controlling an organization including officers, directors, general partners, sole proprietors, owners of more than 25% ownership interest, any trustee of an organization, and any person determined by a final judgment or final administrative order to have exercised control over the organization.

(9) Letter of credit--An irrevocable letter of credit issued:

(A) on a Commission-approved form;

(B) by and drawn on a third party bank authorized under state or federal law to do business in Texas; and

(C) renewed and continued in effect until the conditions of the letter of credit have been met or its release is approved by the Commission or its authorized delegate.

(10) Bond--A surety instrument issued:

(A) on a Commission-approved form;

(B) by and drawn on a third party corporate surety authorized under state law to issue surety bonds in Texas; and

(C) renewed and continued in effect until the conditions of the bond have been met or its release is approved by the Commission or its authorized delegate.

(11) Director--The director of the Commission's Oil and Gas Division or the director's delegate.

(b) Filing fees. The following filing fees are required to be paid to the Railroad Commission.

(1) With each application or materially amended application for a permit to drill, deepen, plug back, or reenter a well, the applicant shall submit to the Commission a nonrefundable fee of:

(A) $200 if the proposed total depth of the well is 2,000 feet or less;

(B) $225 if the proposed total depth of the well is greater than 2,000 feet but less than or equal to 4,000 feet;

(C) $250 if the proposed total depth of the well is greater than 4,000 feet but less than or equal to 9,000 feet; or

(D) $300 if the proposed total depth of the well is greater than 9,000 feet.

(2) An application for a permit to drill, deepen, plug back, or reenter a well will be considered materially amended if the amendment is made for a purpose other than:

(A) to add omitted required information;

(B) to correct typographical errors; or

(C) to correct clerical errors.

(3) An applicant shall submit an additional nonrefundable fee of $150 when requesting that the Commission expedite the application for a permit to drill, deepen, plug back, or reenter a well.

(4) With each individual application for an exception to any rule or rules in this chapter, the applicant shall submit to the Commission a nonrefundable fee of $150, except as provided in paragraph (5) of this subsection.

(5) With each application for an exception to any rule or rules in this chapter that includes an exception to §3.37 of this title (relating to Statewide Spacing Rule) (Statewide Rule 37) or §3.38 of this title (relating to Well Densities) (Statewide Rule 38), the applicant shall submit a nonrefundable fee of $200.

(6) With each application for an oil and gas waste disposal well permit, the applicant shall submit to the Commission a nonrefundable fee of $100 per well.

(7) With each application for a fluid injection well permit, the applicant shall submit to the Commission a nonrefundable fee of $200 per well. Fluid injection well means any well used to inject fluid or gas into the ground in connection with the exploration or production of oil or gas other than an oil and gas waste disposal well.

(8) With each application for a permit to discharge to surface water other than a permit for a discharge that meets national pollutant discharge elimination system (NPDES) requirements for agricultural or wildlife use, the applicant shall submit to the Commission a nonrefundable fee of $300.

(9) If a certificate of compliance for an oil lease or gas well has been canceled for violation of one or more Commission rules, the operator shall submit to the Commission a nonrefundable fee of $300 for each severance or seal order issued for the well or lease before the Commission may reissue the certificate pursuant to §3.58 of this title (relating to Oil, Gas, or Geothermal Resource Producer's Reports) (Statewide Rule 58).

(10) With each application for issuance, renewal, or material amendment of an oil and gas waste hauler's permit, the applicant shall submit to the Commission a nonrefundable fee of $100.

(11) With each Natural Gas Policy Act (15 United States Code §§3301-3432) application, the applicant shall submit to the Commission a nonrefundable fee of $150.

(12) Hazardous waste generation fee. A person who generates hazardous oil and gas waste, as that term is defined in §3.98 of this title (relating to Standards for Management of Hazardous Oil and Gas Waste), shall pay to the Commission the fees specified in §3.98(z).

(13) A check or money order for any of the aforementioned fees shall be made payable to the Railroad Commission of Texas. If the check accompanying an application is not honored upon presentment, the permit issued on the basis of that application, the allowable assigned, the exception to a statewide rule granted on the basis of the application, the certificate of compliance reissued, or the Natural Gas Policy Act category determination made on the basis of the application may be suspended or revoked.

(14) If an operator submits a check that is not honored on presentment, the operator shall, for a period of 24 months after the check was presented, submit any payments in the form of a credit card, cashier's check, or cash.

(c) Organization Report Fee. An organization report required by Texas Natural Resources Code, §91.142, shall be accompanied by a fee as follows:

(1) for an operator of:

(A) not more than 25 wells, $300;

(B) more than 25 but not more than 100 wells, $500; or

(C) more than 100 wells, $1,000;

(2) for an operator of one or more natural gas pipelines, $225;

(3) for an operator of one or more of the following service activities: pollution cleanup contractor; directional surveying; approved cementer for plugging wells; or physically moving or storing crude or condensate, $300;

(4) for an operator of one or more liquids pipelines, $625;

(5) for an operator of all other service activities or facilities, $500;

(6) for an operator with multiple activities, a total fee equal to the sum of the separate fees applicable to each category of service activity, facility, pipeline, or number of wells operated shall be submitted, provided that the total fee for an operator of wells shall not exceed $1,125; and

(7) for an entity not currently performing operations under the jurisdiction of the Commission, $300.

(d) Financial security.

(1) Except for those operators exempted under subsection (g)(7) of this section, any person, including any firm, partnership, joint stock association, corporation, or other organization, required by Texas Natural Resources Code, §91.142, to file an organization report with the Commission must also file financial security in one of the following forms:

(A) an individual performance bond;

(B) a blanket performance bond; or

(C) a letter of credit or cash deposit in the same amount as required for an individual performance bond or blanket performance bond.

(2) An unbonded operator that has a current and active organization report and filed a nonrefundable annual fee as its financial security prior to September 1, 2004, may continue to perform operations subject to

the Commission's jurisdiction with such financial security until the first date after September 1, 2004, for annual renewal of the operator's organization report, at which time the operator shall file financial security as required by subsection (g) of this section.

(e) Forms for financial security. Operators shall submit bonds and letters of credit on forms prescribed by the Commission.

(f) Filing deadlines for financial security. Operators shall submit required financial security at the time of filing an initial organization report or upon yearly renewal, or as otherwise required under this section.

(g) Amount of financial security. An operator required to file financial security under subsection (d) of this section shall file financial security described in this subsection.

(1) Types and amounts of financial security required.

(A) A person operating one or more wells may file an individual performance bond, letter of credit, or cash deposit in an amount equal to the sum of $2.00 for each foot of total well depth for each well operated.

(B) A person operating one or more wells may file a blanket bond, letter of credit, or cash deposit to cover all wells for which a bond, letter of credit, or cash deposit is required in an amount equal to the sum of the base amount determined by the total number of wells operated. A person performing multiple operations shall be required to file only one blanket bond, letter of credit, or cash deposit unless the person is operating a commercial facility, in which case the person also shall comply with the financial security requirements of subsection (l) of this section. The financial security amount shall be at least the base amount determined by the total number of wells operated or $25,000, whichever is greater. The base amount is determined as follows:

(i) The base amount for a person operating 10 or fewer wells or performs other operations shall be $25,000.

(ii) The base amount for a person operating more than 10 but fewer than 100 wells shall be $50,000.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.76	**Commission Approval of Plats for Mineral Development**

(a) The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Minerals--Oil and/or gas.

(2) Operations site--A surface area of two or more acres that an owner of a possessory mineral interest may use to explore for and produce minerals, which is located in whole or in part within a qualified subdivision, and designated on the subdivision plat.

(3) Possessory mineral interest--A mineral interest that includes the right to use the land surface for exploration and production of minerals.

(4) Qualified subdivision--A tract of land not more than 640 acres:

(A) that is located in a county having a population in excess of 400,000, or in a county having a population in excess of 140,000 that borders a county having a population in excess of 400,000 or located on a barrier island;

(B) that has been subdivided in a manner authorized by law by the surface owners for residential, commercial, or industrial use; and

(C) that contains an operations site for each separate 80 acres within the 640-acre tract and provisions for road and pipeline easements to allow use of the operations sites.

(5) Barrier island--An island bordering on the Gulf of Mexico and entirely surrounded by water.

(b) As provided in subsections (e) and (f) of this section, the surface owners of a parcel of land may restrict use of the surface by the possessory mineral owners if the tract is a qualified subdivision and if a plat of the subdivision has been approved by the Railroad Commission after notice and hearing and filed with the clerk of the county in which the qualified subdivision is to be located.

(c) An application for a hearing under this section must be made in writing and mailed or delivered to the director of the Oil and Gas Division. The application must include:

(1) a jurisdictional statement setting out the facts stated in subsection (a)(4)(A) and (B) of this section;

(2) a statement that the applicant has authority to represent and represents all surface owners of land contained in the proposed qualified subdivision;

(3) the names and addresses of all owners of possessory mineral interests and all mineral lessors of land contained in the proposed qualified subdivision;

(4) a plat of the proposed subdivision showing each proposed 80-acre tract with its operations site, road easements, and pipeline easements and a legible copy thereof no larger than 8 1/2 inches by 11 inches;

(5) a concise description of mineral development in the area, including the number of oil and/or gas wells within 2.5 miles of the boundary of the proposed qualified subdivision and the depths at which each well is completed;

(6) a list of all the Railroad Commission designated oil and/or gas fields, if any, which underlie the proposed qualified subdivision; including the spacing and density requirements. If no Railroad Commission designated fields underlie the qualified subdivision, the application should so state.

(d) The Railroad Commission shall, on proper notice to the applicant and owners of possessory mineral interests and mineral lessors of land contained in the proposed qualified subdivision, hold a hearing on the application to determine the adequacy of the number and location of operations sites and road and pipeline easements. At the hearing on the application, evidence may be presented by the applicant and the owners of possessory mineral interests and mineral lessors. The applicant must carry the burden of proof. After considering the evidence, the commission may approve, reject, or amend the application to ensure that the mineral resources of the subdivision may be fully and effectively developed.

(e) An owner of a possessory mineral interest within a Railroad Commission approved qualified subdivision may use only the surface contained in designated operations sites for exploration, development, and production of minerals and only the designated easements as necessary to adequately use the operations sites.

(f) The owner of the possessory mineral interest may drill wells or extend well bores from an operations site or from a site outside of the qualified subdivision to bottomhole locations vertically beneath the surface of parts of the qualified subdivision other than the operation sites. Such drilling is subject to other applicable commission rules and regulations, and is permissible only to the extent that the operations do not unreasonably interfere with the use of the surface of the qualified subdivision outside the operations site.

(g) Subsections (e) and (f) of this section cease to apply to a subdivision if, by the third anniversary of the date on which the order of the commission becomes final:

(1) the surface owner has not commenced actual construction of roads or utilities within the qualified subdivision; and

(2) a lot within the qualified subdivision has not been sold to a third party.

(h) All or any portion of a qualified subdivision may be amended, replatted, or abandoned by the surface owner. An amendment or replat, however, may not alter, diminish, or impair the usefulness of an operations site or appurtenant road or pipeline easement unless the amendment or replat is approved by the commission. Railroad Commission approval of a replat or amendment may be administratively granted by the director of the Oil and Gas Division, or his delegate, upon submission of items required in subsection (c) of this section and after notice and opportunity for hearing has been afforded to all possessory mineral interest owners and mineral lessors of land contained within the original and/or replatted or amended qualified subdivision.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.73	**Pipeline Connection; Cancellation of Certificate of Compliance; Severance**

(a) No pipeline shall be connected with any oil, gas, or geothermal resources well until the operator of the well provides the pipeline operator with a certificate from the Commission that the rules in this title have been complied with. This section shall not prevent a temporary connection with any well in order to take care of production and prevent waste until the operator has a reasonable time, not to exceed 30 days from the date of such connection, within which to obtain such certificate. For purposes of this section, the term "Commission" means the Railroad Commission of Texas, the Director of the Oil and Gas Division, or the Director's delegate.

(b) No pipeline operator shall physically disconnect its facilities from or cease providing pipeline services to any well or lease without first obtaining:

(1) written consent of the well or lease operator for the proposed disconnect or termination; or

(2) written permission from the Commission. This section does not apply to temporary suspensions of service authorized under other rules in this title or attributable to maintenance, safety, or product quality issues.

(c) If the pipeline operator is unable to obtain the written consent of the well or lease operator to physically disconnect from or cease providing service to the well or lease, or the well or lease operator objects to the proposed physical disconnect or termination of service, and the pipeline operator still desires to physically disconnect from or cease providing service to the well or lease, the pipeline operator shall file an application with the Commission requesting permission to physically disconnect its facilities from or cease providing service to the well or lease. An affected well or lease operator may object to physical disconnection or cessation of service and file a complaint with the Commission under this subsection.

(1) The pipeline operator shall file its application with the Commission at least 30 days prior to the date on which the pipeline operator desires to make the physical disconnection or cease providing service. On the same date as the pipeline operator files its application with the Commission, the pipeline operator shall send a copy of the application to the operator of the well or lease affected by the application by certified mail, return receipt requested. The application shall identify the well operator and pipeline operator, identify each lease or well involved, and provide sufficient information to allow the Commission to make a determination pursuant to subsection (c)(4).

(2) If the operator of the well or lease does not file with the Commission a written objection to the application within 28 days following the filing of the application, the Commission shall administratively approve or deny the application and shall notify the pipeline operator and the well or lease operator of the decision by certified mail, return receipt requested. Following such notification, either party shall have 21 days to file a written request for hearing. If neither party files a timely request for hearing, the administrative approval or denial shall be deemed final.

(3) If either party files a timely request for hearing, the Commission shall refer the application to the Office of General Counsel docket services to be set for hearing within 60 days following the date of referral.

(4) In determining whether or not to approve a request to physically disconnect from or cease providing service to a well or lease, the Commission may consider relevant factors, including but not limited to:

(A) operational integrity of the pipeline facilities;

(B) operational integrity of the equipment on the well or lease;

(C) cost of continued operation of the physical connection or service;

(D) risk to public safety, human health and the environment;

(E) availability of alternative transportation;

(F) protection of correlative rights; and

(G) prevention of waste.

(d) The Commission may shut in and seal any well, and cancel any certificate of compliance if it appears that the operator of a well has violated or is violating, in connection with the operation of the well, any statutes, rules in this title, permits, or orders of the Commission. Upon receipt of information that indicates operations are being conducted in violation of statutes, rules in this title, or a Commission permit or order, the Commission shall send a notice letter to the operator directing the operator to correct the violation. The letter shall state the facts or conduct alleged to warrant the shut-in and sealing of the well, and cancellation of the certificate of compliance. The letter shall give the operator an opportunity to show compliance with the statutes, rules in this title, or Commission permits or orders. The letter shall be sent by registered or certified mail, and shall indicate the time within which compliance shall be demonstrated or achieved. The time period allowed for the operator to achieve compliance shall not be less than 10 days from the date the notice letter is sent.

(e) Within the time period set out in the notice letter, the operator shall either demonstrate compliance or correct the violation, and notify the Commission of its action.

(f) If the violation is not corrected within the time period set out in the notice letter, the Commission may shut in and seal the well, and cancel the certificate of compliance.

(g) If a certificate of compliance has been cancelled, the Commission may not issue a new certificate of compliance until the owner or operator of the property covered by the certificate of compliance submits to the Commission a reissuance fee as required by §3.78 of this title (relating to Fees and Financial Security Requirements) (Statewide Rule 78); and

(1) the property covered by the certificate is brought into compliance with the statutes, rules in this title, and Commission permits and orders; or

(2) the Commission determines that there are just and equitable grounds for reissuing the certificate.

(h) Pursuant to Texas Natural Resources Code, §85.165, upon notice from the Commission to any operator of a pipeline or other carrier connected to any oil, gas, or geothermal resource well that the certificate of compliance applicable to the well has been cancelled by the Commission, the operator of the pipeline or other carrier shall disconnect from or suspend service to the well and shall not transport any oil or gas produced from that well until a new certificate of compliance has been issued by the Commission. Pursuant to Texas Natural Resources Code, §85.3855, failure to comply with this subsection may subject a person to a penalty of up to $10,000 per violation.

(i) Pursuant to Texas Natural Resources Code, §85.166, upon notice from the Commission that a certificate of compliance as to any oil, gas, or geothermal resource well has been cancelled as provided in this section, the operator of such well shall not produce oil, gas, or geothermal resources from that well until a new certificate of compliance with respect to the well has been issued by the Commission as provided in this section. Pursuant to Texas Natural Resources Code, §85.3855, failure to comply with this subsection may subject a person to a penalty of up to $10,000 per violation.

(j) The provisions of this section shall be cumulative of other Commission actions and procedures relating to violations of state statutes or Commission permits, rules, and orders, including the authority of the Commission to immediately shut in a well or lease, or to direct the operator to shut in a well or lease, when an emergency exists due to pollution or an imminent threat of harm to people or property.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.72	**Obtaining Pipeline Connections**

(a) A common carrier pipeline transporting crude oil in Texas, upon application for connection and offer of crude oil by a producer or persons owning unconnected lease batteries, shall connect such lease batteries in the following instances:

(1) when such request is made for connection of lease batteries in the general area served by a common carrier, which is an affiliate or subsidiary of a common purchaser, as defined in the Texas Natural Resources Code, §111.081; and

(2) within individual fields, when any common carrier possesses the only pipeline serving such field or common reservoir and request is made for connection of an unconnected lease battery in the field, provided, that for just cause a common carrier pipeline may apply for an exception. If proper application has been made for such connection and the common carrier pipeline refuses to connect the unconnected lease battery, a complaint for failure to connect may be filed with the commission by the person seeking the connection. The complaining person may allege discrimination or noncompliance with the provisions of this subsection or the appropriate section(s) of the Texas Natural Resources Code.

(b) Whether the matter comes to the commission either as an application for exception by the pipeline or on a complaint for failure to connect, at least 10 days' notice shall be given to all interested parties, after which the hearing shall be held. At the hearing, the commission may require and consider, among other factors, evidence relating to ability of the pipeline carrier to transport the quality of oil, the market or lack of market for the proffered oil, and the period required to return the capital investment for the connection. It is not its intention to limit, nor does the commission herein limit, the consideration by it of any facts with respect to a claim of violation of, or of any facts that may constitute a cause of action for violation of, any of the provisions of Texas Natural Resources Code, §§11.001-11.136, whether enumerated in this section or not.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.71	**Pipeline Tariffs**

Every person owning, operating, or managing any pipeline, or any part of any pipeline, for the gathering, receiving, loading, transporting, storing, or delivering of crude petroleum as a common carrier shall be subject to and governed by the following provisions. Common carriers specified in this section shall be referred to as "pipelines," and the owners or shippers of crude petroleum by pipelines shall be referred to as "shippers."

(1) All marketable oil to be received for transportation. By the term "marketable oil" is meant any crude petroleum adapted for refining or fuel purposes, properly settled and containing not more than 2.0% of basic sediment, water, or other impurities above a point six inches below the pipeline connection with the tank. Pipelines shall receive for transportation all such "marketable oil" tendered; but no pipeline shall be required to receive for shipment from any one person an amount exceeding 3,000 barrels of petroleum in any one day; and, if the oil tendered for transportation differs materially in character from that usually produced in the field and being transported therefrom by the pipeline, then it shall be transported under such terms as the shipper and the owner of the pipeline may agree or the commission may require.

(2) Basic sediment, how determined--temperature. In determining the amount of sediment, water, or other impurities, a pipeline is authorized to make a test of the oil offered for transportation from an average sample from each such tank, by the use of centrifugal machine, or by the use of any other appliance agreed upon by the pipeline and the shipper. The same method of ascertaining the amount of the sediment, water, or other impurities shall be used in the delivery as in the receipt of oil. A pipeline shall not be required to receive for transportation, nor shall consignee be required to accept as a delivery, any oil of a higher temperature than 90 degrees Fahrenheit, except that during the summer oil shall be received at any atmospheric temperature, and may be delivered at like temperature. Consignee shall have the same right to test the oil upon delivery at destination that the pipeline has to test before receiving from the shipper.

(3) "Barrel" defined. For the purpose of these sections, a "barrel" of crude petroleum is declared to be 42 gallons of 231 cubic inches per gallon at 60 degrees Fahrenheit.

(4) Oil involved in litigation, etc.--indemnity against loss. When any oil offered for transportation is involved in litigation, or the ownership is in dispute, or when the oil appears to be encumbered by lien or charge of any kind, the pipeline may require of shippers an indemnity bond to protect it against all loss.

(5) Storage. Each pipeline shall provide, without additional charge, sufficient storage, such as is incident and necessary to the transportation of oil, including storage at destination or so near thereto as to be available for prompt delivery to destination point, for five days from the date of order of delivery at destination.

(6) Identity of oil, maintenance of oil. A pipeline may deliver to consignee either the identical oil received for transportation, subject to such consequences of mixing with other oil as are incident to the usual pipeline transportation, or it may make delivery from its common stock at destination; provided, if this last be done, the delivery shall be of substantially like kind and market value.

(7) Minimum quantity to be received. A pipeline shall not be required to receive less than one tank car-load of oil when oil is offered for loading into tank cars at destination of the pipeline. When oil is offered for transportation for other than tank car delivery, a pipeline shall not be required to receive less than 500 barrels.

(8) Gathering charges. Tariffs to be filed by a pipeline shall specify separately the charges for gathering of the oil, for transportation, and for delivery.

(9) Measuring, testing, and deductions (reference Special Order Number 20-63,098 effective June 18, 1973).

(A) Except as provided in subparagraph (B) of this paragraph, all crude oil tendered to a pipeline shall be gauged and tested by a representative of the pipeline prior to its receipt by the pipeline. The shipper may be present or represented at the gauging or testing. Quantities shall be computed from correctly compiled tank tables showing 100% of the full capacity of the tanks.

(B) As an alternative to the method of measurement provided in subparagraph (A) of this paragraph, crude oil and condensate may be measured and tested, before transfer of custody to the initial transporter, by:

(i) lease automatic custody transfer (LACT) equipment, provided such equipment is installed and operated in accordance with the latest revision of American Petroleum Institute (API) Manual of Petroleum Measurement Standards, Chapter 6.1, or;

(ii) any device or method, approved by the commission or its delegate, which yields accurate measurements of crude oil or condensate.

(C) Adjustments to the quantities determined by the methods described in subparagraphs (A) or (B) of this paragraph shall be made for temperature from the nearest whole number degree to the basis of 60 degrees Fahrenheit and to the nearest 5/10 API degree gravity in accordance with the volume correction Tables 5A and 6A contained in API Standard 2540, American Society for Testing Materials 01250, Institute of Petroleum 200, first edition, August 1980. A pipeline may deduct the basic sediment, water, and other impurities as shown by the centrifugal or other test agreed upon by the shipper and pipeline; and 1.0% for evaporation and loss during transportation. The net balance shall be the quantity deliverable by the pipeline. In allowing the deductions, it is not the intention of the commission to affect any tax or royalty obligations imposed by the laws of Texas on any producer or shipper of crude oil.

(D) A transfer of custody of crude between transporters is subject to measurement as agreed upon by the transporters.

(10) Delivery and demurrage. Each pipeline shall transport oil with reasonable diligence, considering the quality of the oil, the distance of transportation, and other material elements, but at any time after receipt of a consignment of oil, upon 24 hours' notice to the consignee, may offer oil for delivery from its common stock at the point of destination, conformable to paragraph (6) of this section, at a rate not exceeding 10,000 barrels per day of 24 hours. Computation of time of storage (as provided for in paragraph (5) of this section) shall begin at the expiration of such notice. At the expiration of the time allowed in paragraph (5) of this section for storage at destination, a pipeline may assess a demurrage charge on oil offered for delivery and remaining undelivered, at a rate for the first 10 days of $.001 per barrel; and thereafter at a rate of $.0075 per barrel, for each day of 24 hours or fractional part thereof.

(11) Unpaid charges, lien for and sale to cover. A pipeline shall have a lien on all oil to cover charges for transportation, including demurrage, and it may withhold delivery of oil until the charges are paid. If the

charges shall remain unpaid for more than five days after notice of readiness to deliver, the pipeline may sell the oil at public auction at the general office of the pipeline on any day not a legal holiday. The date for the sale shall be not less than 48 hours after publication of notice in a daily newspaper of general circulation published in the city where the general office of the pipeline is located. The notice shall give the time and place of the sale, and the quantity of the oil to be sold. From the proceeds of the sale, the pipeline may deduct all charges lawfully accruing, including demurrage, and all expenses of the sale. The net balance shall be paid to the person lawfully entitled thereto.

(12) Notice of claim. Notice of claims for loss, damage, or delay in connection with the shipment of oil must be made in writing to the pipeline within 91 days after the damage, loss, or delay occurred. If the claim is for failure to make delivery, the claim must be made within 91 days after a reasonable time for delivery has elapsed.

(13) Telephone-telegraph line--shipper to use. If a pipeline maintains a private telegraph or telephone line, a shipper may use it without extra charge, for messages incident to shipments. However, a pipeline shall not be held liable for failure to deliver any messages away from its office or for delay in transmission or for interruption of service.

(14) Contracts of transportation. When a consignment of oil is accepted, the pipeline shall give the shipper a run ticket, and shall give the shipper a statement that shows the amount of oil received for transportation, the points of origin and destination, corrections made for temperature, deductions made for impurities, and the rate for such transportation.

(15) Shipper's tanks, etc.--inspection. When a shipment of oil has been offered for transportation the pipeline shall have the right to go upon the premises where the oil is produced or stored, and have access to any and all tanks or storage receptacles for the purpose of making any examination, inspection, or test authorized by this section.

(16) Offers in excess of facilities. If oil is offered to any pipeline for transportation in excess of the amount that can be immediately transported, the transportation furnished by the pipeline shall be apportioned among all shippers in proportion to the amounts offered by each; but no offer for transportation shall be considered beyond the amount which the person requesting the shipment then has ready for shipment by the pipeline. The pipeline shall be considered as a shipper of oil produced or purchased by itself and held for shipment through its line, and its oil shall be entitled to participate in such apportionate.

(17) Interchange of tonnage. Pipelines shall provide the necessary connections and facilities for the exchange of tonnage at every locality reached by two or more pipelines, when the commission finds that a necessity exists for connection, and under such regulations as said commission may determine in each case.

(18) Receipt and delivery--necessary facilities for. Each pipeline shall install and maintain facilities for the receipt and delivery of marketable crude petroleum of shippers at any point on its line if the commission finds that a necessity exists therefor, and under regulations by the commission.

(19) Reports of loss from fires, lightning, and leakage.

(A) Each pipeline shall immediately notify the commission district office, electronically or by telephone, of each fire that occurs at any oil tank owned or controlled by the pipeline, or of any tank struck by lightning. Each pipeline shall in like manner report each break or leak in any of its tanks or pipelines from which more than five barrels escape. Each pipeline shall file the required information with the commission in accordance with the appropriate commission form within 30 days from the date of the spill or leak.

(B) No risk of fire, storm, flood, or act of God, and no risk resulting from riots, insurrection, rebellion, war, or act of the public enemy, or from quarantine or authority of law or any order, requisition or necessity of the government of the United States in time of war, shall be borne by a pipeline, nor shall any liability accrue to it from any damage thereby occasioned. If loss of any crude oil from any such causes occurs after the oil has been received for transportation, and before it has been delivered to the consignee, the shipper shall bear a loss in such proportion as the amount of his shipment is to all of the oil held in transportation by the pipeline at the time of such loss, and the shipper shall be entitled to have delivered only such portion of his shipment as may remain after a deduction of his due proportion of such loss, but in such event the shipper shall be required to pay charges only on the quantity of oil delivered. This section shall not apply if the loss occurs because of negligence of the pipeline.

(C) Common carrier pipelines shall mail (return receipt requested) or hand deliver to landowners (persons who have legal title to the property in question) and residents (persons whose mailing address is the property in question) of land upon which a spill or leak has occurred, all spill or leak reports required by the commission for that particular spill or leak within 30 days of filing the required reports with the commission. Registration with the commission by landowners and residents for the purpose of receiving spill or leak reports shall be required every five years, with renewal registration starting January 1, 1999. If a landowner or resident is not registered with the commission, the common carrier is not required to furnish such reports to the resident or landowner.

(20) Printing and posting. Each pipeline shall have paragraphs (1)-(19) of this section printed on its tariff sheets, and shall post the printed sections in a prominent place in its various offices for the inspection of the shipping public. Each pipeline shall post and publish only such rules and regulations as may be adopted by the commission as general rules or such special rules as may be adopted for any particular field.

(21) Immediately upon the publication of its tariffs, and each subsequent amendment thereof, each pipeline is requested to file one copy with the commission.

(22) Records.

(A) Each person operating crude oil gathering, transportation, or storage facilities in the state must maintain daily records of the quantities of all crude oil moved from each oil field in the state, and such records shall also show separately for each field to whom delivery is made, and the quantities so delivered.

(B) The information contained in the records thus required to be kept must be reported to the commission by the gatherers, transporters, and handlers at such times and in such manner as may be required by the commission.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.70	**Pipeline Permits Required**

(a) No pipeline or gathering system, whether a common carrier or not, shall be used to transport oil, gas, or geothermal resources from any tract of land within this state without a permit from the commission. Application for the permit shall be made upon the required form, and the permit will be granted if the commission is satisfied from such application and the evidence in support thereof, and its own investigation, that the proposed line is, or will be, so laid, equipped, and managed, as to reduce to a minimum the possibility of waste, and will be operated in accordance with the conservation laws and conservation rules and regulations of the commission.

(b) The permit, if granted, shall be revocable at any time after hearing held after 10 days' notice, if the commission finds that the line is so unsafe, or so improperly equipped, or so managed, as likely to result in waste. If the commission finds the line is in such condition as to cause waste, five days' written notice shall be given to the operating company to correct the condition before notice of hearing for revocation of the permit is given. A permit may also be revoked after 10 days' notice and hearing, if the commission finds that the operator of the line, in its operation thereof, is willfully violating or contributing to the violation of the laws of Texas regulating the production, transportation, processing, refining, treating, and/or marketing of crude oil or geothermal resources, or any of the laws of the state to conserve the oil, gas, or geothermal resources, or any rule or regulation of the commission enacted under such laws.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.63	**Carbon Black Plant Permits Required**

(a) Each operator of a carbon black plant shall make application for a permit to operate the plant, using the appropriate form.

(b) No person shall operate a plant for the burning of natural gas in the manufacture of carbon black without a permit authorizing the operation of the plant.

(c) Each 12 months the commission, on application, may grant a permit to each of the operators of carbon black plants for a period of 12 months.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.62	**Cycling Plant Control and Reports**

(a) The operator of each cycling plant shall use tanks for measuring the crude oil, condensate, or other liquid hydrocarbons taken into or extracted by the cycling plant.

(b) The operator of each cycling plant shall meter the following separately:

(1) all gas taken into the plant from statutory gas wells;

(2) all casinghead gas taken into the cycling plant;

(3) all gas used for plant fuel;

(4) all gas taken by pipe lines or for domestic or commercial uses;

(5) all gas, including flash vapors, vented directly or indirectly to the air.

(c) Gas used for lifting water by jetting, or used in turbines and subsequently vented to the air or burned in a flare, shall be accurately metered and reported by the operator as vented on the appropriate form.

(d) No cycling plant shall be permitted to vent any gas taken into the plant from statutory gas wells; however, the venting of a volume of flash vapors not to exceed 2.0% of the volume of gas taken into said plant shall be considered to be compliance.

(e) No gas shall be used for plant operation that is not burned in boilers, heaters, or internal combustion engines in a reasonably efficient manner, and no raw gas or residue gas shall be used for plant fuel if any flash vapors are being vented or flared.

(f) No cycling plant shall be operated without a certificate of compliance. The appropriate form submitted to the commission and approved by it shall be in effect for a period of 12 months, but may be renewed for one or more periods of 12 months. The certificate of compliance shall be revoked if an inspection reveals noncompliance.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.61	**Refinery and Gasoline Plants**

(a) The operator of each refinery in the state shall use tanks for measuring the crude oil and products taken into the refinery and the finished products of the refinery.

(b) No refinery or gasoline plant shall be operated without a certificate of compliance on a form supplied by the commission and approved by it, which shall be in effect for a period of 12 months, but may be renewed for one or more additional 12-month period. The operator must equip the plant with tanks and proper metering facilities.

(c) Measuring facilities for the accurate measurement of the volume of each type of gas taken into a natural gasoline plant shall be installed and used by the operator of the gasoline plant. Meters must be provided and used for measuring separately the dry sweet natural gas, the dry sour natural gas, casinghead gas, and refinery vapors taken into each plant. Accurate meters must be installed and used in each gasoline plant in which is processed dry gas (as distinguished from casinghead gas) so that all disposals of residue gas from such natural gasoline plant are accurately accounted for. Adequate devices should likewise be installed and used in each gasoline plant at which casinghead gas exclusively, or casinghead gas and refinery vapors only are processed, for the purpose of making approximate estimates of the volume of residue gas produced from such plant; such devices may consist either of meters, pilot tubes, pressure recording gauges, or manometers, through which measurements may be made from which reasonably accurate estimates of volume can be made.

(d) Measuring natural gasoline.

(1) Adequate tanks or meters of standard or approved types must be provided for measuring accurately all finished products of natural gasoline plants.

(2) The operator of each natural gasoline plant shall meter separately the volume of dry sweet natural gas, dry sour natural gas, casinghead gas, and refinery vapors that are taken into each natural gasoline plant.

(3) The operator of each natural gasoline plant in which dry natural gas (as distinguished from casinghead gas) is processed shall use metering facilities so that all disposition of residue gas from such natural gasoline plants are accurately accounted for. The operator of each natural gasoline plant in which casinghead gas exclusively, or casinghead gas and refinery vapors only, are processed shall install and use measuring devices, consisting either of meters, pitot tubes, pressure recording gauges, or manometers, with which measurements may be made of the residue gas disposition from the plant.

(4) The operator of each natural gasoline plant shall provide and use tanks or meters of standard or approved type for measuring each finished product of the plant.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.60	**Refinery Reports**

On or before the 15th day of each calendar month, the operator of each refinery, processing plant, blending plant or treating plant, and/or other plant situated within the state that processes or manufactures a product, except those gas processing plants for which another form is required by §3.54(a) of this title (relating to Gas Reports Required), shall file with the commission a report covering the operations of the refinery or plant during the preceding month. The report must contain the data and information required to be reported on the form.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.59	**Oil and Gas Transporter's Reports**

(a) General. The commission may, from time to time, require oil and gas pipeline companies to make reports to the commission showing wells connected with their lines during any month, the amount of production taken therefrom, names of parties from whom oil and gas are purchased, and the amount of oil or gas purchased therefrom.

(b) Daily report. The commission may, in case of overproduction or for any other reason which it deems urgent, require oil and gas pipe line companies to furnish daily reports of the amount of oil or gas purchased or taken from different wells or parties.

(c) Weekly stock report. Rescinded by Order Number 20-57,970, effective 11-16-67.

(d) Monthly transportation and storage report.

(1) Each gatherer, transporter, storer, and/or handler of crude oil or products, or both, shall file with the commission on or before the last day of each calendar month a report showing the required information concerning the transportation operations of such gatherer, transporter, or storer for the next preceding month. Such form is incorporated in and made a part of this section.

(2) The original of the report, covering all of the operations of the gatherer, transporter, storer, and/or handler of crude oil or products, or both, shall be filed in the Austin office of the commission. One copy of the report shall be filed in each district office in which the gatherer, transporter, storer, and/or handler of crude oil or products, or both, operates, but may include only the information pertaining to the operations in that district in which it is filed.

(3) The written instructions appearing on said form are incorporated in and made a part of this section, and all of the data and information on the form shall be reported and arranged on the form as required by the form.

(4) No gatherer, transporter, storer, and/or handler of crude oil shall remove crude oil from any property unless such property is identified by a sign posted in compliance with §3.3(3) of this title (relating to Identification of Properties, Wells, and Tanks).

(5) The provisions of this section shall not apply to the operator of any refinery, processing plant, blending plant, or treating plant to which §3.60 of this title (relating to Refinery Reports) applies if the operator has filed the required form.

(e) Annual report.

(1) Each common carrier pipeline shall make and file with the commission, at its Austin office, an annual report for each calendar year. The report must show the names of the officers, directors, and stockholders, and the residence of each; the amount of capital stock and bonded indebtedness outstanding; the results of financial operations; the sources of revenue; and the expenditures, assets and liabilities, and statistical data of oil transported; and such other information as may be deemed pertinent by the commission concerning

the carrier's transactions in the performance of services under its charter provisions relative to the transportation of crude petroleum in the State of Texas.

(2) The annual report must be made to the commission on the form prescribed and furnished by the commission; and must be returned complete, under oath, within 30 days after the receipt of the forms from the commission.

(3) For all purposes applicable under these rules and regulations the "Classification of Investment for Pipe Lines, Pipe Line Operating Revenues, and Pipe Line Operating Expenses" prescribed by the Interstate Commerce Commission and effective on January 1, 1915, is adopted and made a part of these rules for the use of all common carrier pipelines subject to the provisions of that act of the legislature, being Chapter 30 of the Regular Session of the 35th Legislature, State of Texas.

Source Note: The provisions of this §3.59 adopted to be effective January 1, 1976.

Texas Administrative Code

Next Rule>>

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.58	**Oil, Gas, or Geothermal Resource Operator's Reports**

(a) Certificate of Compliance and transportation authority.

(1) Each operator who seeks to operate wells related to crude oil, natural gas, or geothermal resources shall file with the commission's Austin office a commission form P-4 (certificate of compliance and transportation authority) for each property on which the wells are located certifying that the operator has complied with the conservation laws and the oil, gas, and geothermal resources conservation orders, rules, and regulations of the commission in respect to the property. The Commission form P-4 establishes the operator of an oil lease, gas well, or other well; certifies responsibility for regulatory compliance, including plugging wells in accordance with §3.14 of this title (relating to plugging); and identifies gatherers, purchasers, and purchasers' commission-assigned system codes authorized for each well or lease. Operators shall file form P-4 for new oil leases, gas wells, or other wells; recompletions; reclassifications of wells from oil to gas or gas to oil; consolidation, unitization or subdivision of oil leases; or change of gatherer, gas purchaser, gas purchaser system code, operator, field name or lease name. When an operator files a form P-4, the oil and gas division shall review the form for completeness and accuracy. Except as otherwise authorized by the Commission, a transporter (whether the operator or someone else) shall not transport the oil, gas, or geothermal resources from such property until the Commission has approved the certificate of compliance and transportation authority. No certificate of compliance designating or changing the designation of an operator will be approved that is signed, either as transferor or transferee, by a non-employee agent of the organization unless the organization has filed with the commission, on its organization report, the name of the non-employee agent it has authorized to sign such certificates of compliance on its behalf.

(2) An approved certificate of compliance and transportation authority shall bind the operator until another operator files a subsequent certificate and the Commission has approved the subsequent certificate and transferred the property on commission records to the subsequent operator.

(3) The appropriate district office or the Austin office may grant temporary authority for an operator to use a transporter not authorized for a particular property in order to take care of production and prevent waste. The operator shall secure such temporary authority in writing from the appropriate district office or the Austin office before the oil or condensate is moved. In an emergency situation the operator may secure such temporary authority verbally but shall notify the district office in writing within 10 days after the oil or condensate is moved. An emergency situation exists when oil or condensate must be moved off a lease because it poses an imminent threat to the public health and safety, or when the threat of waste is imminent. The operator shall also furnish copies of such authorization or notification to the regular transporter and to the temporary transporter.

(4) If an applicant wishes to assume operator status for a property, but is unable to obtain the signature of the previous operator on the certificate of compliance and transportation authority, the applicant shall file with the oil and gas division in Austin a completed form P-4 signed by a designated officer or agent of the applicant, along with an explanatory letter and legal documentation of the applicant's right to operate the property. Prior to approval of such an application, the office of the general counsel will notify the last known operator of record, if such operator's address is available, affording such operator an opportunity to protest.

(b) Monthly producer's report (oil, natural gas and geothermal resources). For each calendar month, each operator who is a producer of crude oil, natural gas or geothermal resources shall file with the commission a report for each of the operator's producing properties. Operators shall file such reports on commission form P-1 (producer's monthly report of oil wells), commission form P-2 (producer's monthly report of gas wells), or commission form GT-2 (producer's monthly report of geothermal wells). These commission forms report monthly production and disposition of oil and casinghead gas (form P-1), gas well gas and condensate (form P-2) and geothermal resources (form GT-2). On or before the last day of the month subsequent to the period of the report, the operator shall file an original and one copy of each such form, the original to be filed in the

Austin office, and one copy with the transporter taking the oil, gas or geothermal resources from the property.

(c) Recovered load oil.

(1) The operator of each lease from which load oil is recovered shall file the original and one copy of commission form P-3 (authority to transport recovered load or frac oil) with the district office, and another copy with the transporter prior to running the load oil. Form P-3 requires a producer to report the quantity of recovered load or frac oil to be transported from a particular lease and to identify the transporter. The form P-3 (authority to transport recovered load or frac oil) filed by the operator shall be the authority for the transporter to run the quantity of recovered load or frac oil stated in the form.

(2) The provisions of this subsection apply only to oil that has been obtained from a source other than the lease on which it is used. "Recovered load oil or frac oil," as that term is used herein, is any oil or liquid hydrocarbons used in any operation in an oil or gas well, and which has been recovered as a merchantable product.

(d) Subdivision and consolidation of oil leases.

(1) An operator seeking to subdivide or consolidate existing oil leases shall file and obtain approval of a commission form P-4 (certificate of compliance and transportation authority) and a commission form P-6 (request for permission to subdivide or consolidate oil lease(s)). Form P-6 identifies the leases to be subdivided or consolidated as well as the resulting leases. Two plats shall be filed with form P-6, one showing the boundaries of the lease(s) before and one showing the boundaries of the lease(s) after the subdivision or consolidation.

(2) An operator seeking to subdivide an existing oil lease that it operates or to assume operatorship of fewer than all of the wells on an oil lease shall file and obtain approval of a commission form P-4 (certificate of compliance and transportation authority) and a commission form P-6 (request for permission to subdivide or consolidate oil lease(s)). A request to subdivide an oil lease may be approved administratively if the commission staff determines that approval of the request will not cause waste, harm correlative rights, or result in the circumvention of commission rules.

(3) An operator seeking to consolidate two or more existing oil leases that it operates shall file and obtain approval of a commission form P-4 (certificate of compliance and transportation authority) and a commission form P-6 (request for permission to subdivide or consolidate oil lease(s)). A request to consolidate two or more oil leases may be approved administratively if the commission staff determines that approval of the request will not cause waste, harm correlative rights, or result in the circumvention of commission rules and:

(A) the mineral and royalty ownership of the leases proposed for consolidation is identical in all respects;

(B) the operator has obtained a surface commingling exception permit pursuant to §3.26 of this title (relating to separating devices, tanks, and surface commingling of oil) that authorizes commingling of production from all of the leases proposed for consolidation ; or

(C) the operator has filed and obtained approval of a valid commission form P-12 (certificate of pooling authority) authorizing pooling of all of the leases proposed for consolidation.

Source Note: The provisions of this §3.58 adopted to be effective January 1, 1976; amended to be effective February 23, 1979, 4 TexReg 436; amended to be effective May 9, 1988, 13 TexReg 2026; amended to be effective May 22, 2000, 25 TexReg 4512; amended to be effective May 12, 2002, 27 TexReg 3756

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.57	**Reclaiming Tank Bottoms, Other Hydrocarbon Wastes, and Other Waste Materials**

(a) Applicability. This section is applicable to reclamation of tank bottoms and other hydrocarbon wastes generated through activities associated with the exploration, development, and production (including transportation) of crude oil and other waste materials containing oil, as those activities are defined in §3.8(a)(30) of this title (relating to Water Protection). The provisions of this section shall not apply where tank bottoms or other hydrocarbon-bearing materials are recycled or processed on-site by the owner/custodian and are returned to a tank or vessel at the same lease or facility. This section is not applicable to the practice of recycling or reusing drilling mud, except as to those hydrocarbons recovered from such mud recycling and sent to a permitted reclamation plant.

(b) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Tank bottoms--A mixture of crude oil or lease condensate, water, and other substances that is concentrated at the bottom of producing lease tanks and pipeline storage tanks (commonly referred to as basic sediment and water or BS&W).

(2) Other hydrocarbon wastes--Oily waste materials, other than tank bottoms, which have been generated in connection with activities associated with the exploration, development, and production of oil or gas or geothermal resources, as those activities are defined in §3.8(a)(30) of this title (relating to Water Protection). The term "other hydrocarbon wastes" includes, but is not limited to, pit hydrocarbons, skim oil, spillage, and leakage of crude oil or condensate from producing lease or pipeline storage tanks, and crude oil or condensate associated with pipeline ruptures and other spills.

(3) Authorized person--A tank bottoms cleaner or transporter that is under contract for disposition of untreated tank bottoms or other hydrocarbon wastes to a person who has obtained a permit to operate a reclamation plant.

(4) Affected person--A person who has suffered or will suffer actual injury or economic damage other than as a member of the general public and includes surface owners of property on which a reclamation plant is located and surface owners of adjoining properties.

(5) Director--The director of the Oil and Gas Division or a staff delegate designated in writing by the director of the Oil and Gas Division or the commission.

(c) Permitting process.

(1) Removal of tank bottoms or other hydrocarbon wastes from any producing lease tank, pipeline storage tank, or other production facility, for reclaiming by any person, is prohibited unless such person has either obtained a permit to operate a reclamation plant, or is an authorized person. Applicants for a reclamation plant operating permit shall file the appropriate form with the commission in Austin.

(2) The applicant shall give notice by mailing or delivering a copy of the application to the county clerk of

the county where the reclamation plant is to be located, and to the city clerk or other appropriate city official of any city where the reclamation plant is located within the corporate limits of the city, on or before the date the application is mailed to or filed with the commission.

(3) In order to give notice to other local governments and interested or affected persons, notice of the application shall be published once by the applicant in a newspaper of general circulation for the county where the reclamation plant is to be located, in a form approved by the commission. Publication shall occur on or before the date the application is mailed to or filed with the commission. The applicant shall file with the commission in Austin proof of publication prior to the hearing or administrative approval.

(4) If a protest from an affected person or local government is made to the commission within 15 days of receipt of the application or of publication, or if the commission determines that a hearing is in the public interest, then a hearing will be held on the application after the commission provides notice of hearing to all affected persons, local governments, or other persons who express an interest in writing in the application.

(5) If no protest from an affected person or local government is received by the commission within the allotted time, the director may administratively approve the application. If the director denies administrative approval, the applicant shall have a right to a hearing upon request. After hearing, the examiner shall recommend a final action by the commission.

(6) Applicants must demonstrate they are familiar with commission rules and have the proper facilities to comply with the rules.

(7) Except as provided in subparagraphs (A) and (B) of this paragraph, a permit to operate a reclamation plant shall remain in effect until canceled at the request of the operator. Existing permits subject to annual renewal may be renewed so as to remain in effect until canceled. Such renewal shall be subject to the requirements of paragraph (10) of this subsection. A reclamation plant permit may be canceled by the commission after notice and opportunity for hearing, if:

(A) the permitted facility has been inactive for 12 months; or

(B) there has been a violation, or a violation is threatened, of any provision of the permit, the conservation laws of the state, or rules or orders of the commission.

(8) If the operator objects to the cancellation, the operator must file, within 15 days of the date shown on the notice, a written objection and request for a hearing to determine whether the permit should be canceled. If such written request is timely filed, the cancellation will be suspended until a final order is issued pursuant to the hearing. If such request is not received within the required time period, the permit will be canceled. In the event of an emergency which presents an imminent pollution, waste, or public safety threat, the commission may suspend the permit until an order is issued pursuant to the hearing.

(9) A permit to operate a reclamation plant is not transferable. A new permit must be obtained by the new operator.

(10) Reclamation plants permitted under this section shall file financial security as required under §3.78(l) of this title (relating to Fees and Financial Security Requirements).

(d) Operation of a reclamation plant.

(1) The following provisions apply to any removal of tank bottoms or other hydrocarbon wastes from any oil producing lease tank, pipeline storage tank, or other production facility.

(A) Notwithstanding the provisions of §3.85(a)(8) of this title (relating to Manifest To Accompany Each Transport of Liquid Hydrocarbons by Vehicle), an operator of a reclamation plant or an authorized person shall execute a manifest in accordance with §3.85 of this title (relating to Manifest To Accompany Each Transport of Liquid Hydrocarbons by Vehicle), upon each removal of tank bottoms or other hydrocarbon wastes from any oil producing lease tank, pipeline storage tank, or other production facility. In addition to the information required pursuant to §3.85 of this title (relating to Manifest To Accompany Each Transport of Liquid Hydrocarbons by Vehicle), the operator of the reclamation plant or other authorized person shall also include on the manifest:

(i) the commission identification number of the lease or facility from which the material is removed; and

(ii) the gross and net volume of the material as determined by the required shakeout test.

(B) The operator of the reclamation plant or other authorized person shall fill out the manifest before leaving the lease or facility from which the liquid hydrocarbons are removed, and shall retain a copy on file for two years.

(C) The operator of the reclamation plant or other authorized person shall leave a copy of the manifest in the vehicle transporting the material.

(2) The operator of a reclamation plant or other authorized person shall conduct a shakeout (centrifuge) test on all tank bottoms or other hydrocarbon wastes upon removal from any producing lease tank, pipeline storage tank, or other production facility, to determine the crude oil content and lease condensate thereof.

(3) The shakeout test shall be conducted in accordance with the most current American Petroleum Institute or American Society for Testing Materials method.

(e) Reporting of reclaimed crude oil or lease condensate on commission required report.

(1) For wastes taken to a reclamation plant the following provisions shall apply.

(A) The net crude oil content or lease condensate from a producing lease's tank bottom as indicated by the shakeout test shall be used to calculate the amount of oil to be reported as a disposition on the monthly production report. The net amount of crude oil or lease condensate from tank bottoms taken from a pipeline facility shall be reported as a delivery on the monthly transporter report.

(B) For other hydrocarbon wastes, the net crude oil content or lease condensate of the wastes removed from a tank, treater, firewall, pit, or other container at an active facility, including a pipeline facility, shall also be reported as a disposition or delivery from the facility.

(2) The net crude oil content or lease condensate of any tank bottoms or other hydrocarbon wastes removed from an active facility, including a pipeline facility, and disposed of on-site or delivered to a site other than a reclamation plant shall also be reported as a delivery or disposition from the facility. All such disposal shall be in accordance with §§3.8, 3.9, and 3.46 of this title (relating to Water Protection; Disposal Wells; and Fluid Injection into Productive Reservoirs). Operators may be required to obtain a minor permit for such disposal using procedures set out in §3.8(d) and (g) of this title (relating to Water Protection). Prior to approval of the minor permit, the commission may require an analysis of the disposable material to be performed.

(f) General provisions applicable to materials taken to a reclamation plant.

(1) The removal of tank bottoms or other hydrocarbon wastes from any facility for which monthly reports

are not filed with the commission must be authorized in writing by the commission prior to such removal. A written request for such authorization must be sent to the commission office in Austin, and must detail the location, description, estimated volume, and specific origin of the material to be removed, as well as the name of the reclaimer and intended destination of the material. If the authorization is denied, the applicant may request a hearing.

(2) The receipt of any tank bottoms or other hydrocarbon wastes from outside the State of Texas must be authorized in writing by the commission prior to such receipt. However, written approval is not required if another entity will indicate, in the appropriate monthly report, a corresponding delivery of the same material. If the request is denied, the applicant may request a hearing.

(3) The receipt of any waste materials other than tank bottoms or other hydrocarbon wastes must be authorized in writing by the commission prior to such receipt. The commission may require the reclamation plant operator to submit an analysis of such waste materials prior to a determination of whether to authorize such receipt. If the request is denied, the applicant may request a hearing.

(4) The operator of a reclamation plant shall file a report on the appropriate commission form for each reclamation plant facility by the 15th day of each calendar month, covering the facility's activities for the previous month. The operator of a reclamation plant shall file a copy of the monthly report in the district office of any district in which the operator made receipts or deliveries for the month covered by the report.

(5) All wastes generated by reclaiming operations shall be disposed of in accordance with §§3.8, 3.9, and 3.46 of this title (relating to Water Protection; Disposal Wells; and Fluid Injection into Productive Reservoirs). No person conducting activities subject to regulation by the commission may cause or allow pollution of surface or subsurface water in the state.

(g) Commission review of administrative actions. Administrative actions performed by the director or commission staff pursuant to this rule are subject to review by the commissioners.

(h) Policy. The provisions of this rule shall be administered so as to prevent waste and protect correlative rights.

Source Note: The provisions of this §3.57 adopted to be effective April 11, 1990, 15 TexReg 1693; amended to be effective June 1, 1998, 23 TexReg 5656; amended to be effective July 10, 2000, 25 TexReg 6487; amended to be effective September 1, 2004, 29 TexReg 8271

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.56	**Scrubber Oil and Skim Hydrocarbons**

(a) Definitions. The following words and terms, when used in this section, shall have the following meanings unless the context clearly indicates otherwise:

(1) Identifiable liquid hydrocarbons--Volume of scrubber oil/skim hydrocarbons that is received at a gas plant/produced water disposal facility where the origin of such liquid hydrocarbons can be clearly identified.

(2) Producing property--A location from which hydrocarbons are being produced that has been assigned a lease identification number by the Commission and which is used in reporting production.

(3) Scrubber oil--Liquid hydrocarbons which accumulate in lines that are transporting casinghead gas and which are captured at the inlet to a gas processing plant.

(4) Skim hydrocarbons--Oil and condensate which accumulate during produced water disposal operations.

(5) Tolerance--The amount of skim hydrocarbons that may be recovered before the produced water disposal system operator must allocate to the producing property.

(6) Unidentifiable liquid hydrocarbons--Scrubber oil/skim hydrocarbons received at a gas plant/produced water disposal facility where the origin of such liquid hydrocarbons cannot be identified.

(b) Disposition of scrubber oil, skim hydrocarbons, and identifiable liquid hydrocarbon volumes.

(1) Scrubber oil. Any scrubber oil that has not been returned to a producing property by the end of a monthly report period shall be reported by the operator of the gas plant on the monthly plant report, Form R-3 (Monthly Report for Gas Processing Plants). The unidentifiable liquid hydrocarbons recovered and reported on Form R-3 may be disposed of at the point of accumulation. The accepted Form R-3 shall be the authority for the movement of the hydrocarbons to beneficial disposition.

(2) Skim hydrocarbons.

(A) All unidentifiable liquid hydrocarbons recovered by a single operator or multiple operator produced water disposal system shall be reported on the Form P-18 (Skim Oil/Condensate Report) for each reporting period.

(B) The unidentifiable liquid hydrocarbons recovered and reported on Form P-18 may be disposed of at the point of accumulation. The accepted Form P-18 shall be the authority for the movement of the hydrocarbons to beneficial disposition.

(C) Unidentifiable liquid hydrocarbons recovered by a single operator produced water disposal system shall be allocated to each producing property in the proportion that the volume of water received from the producing property bears to the total volume of water received by the system during a reporting period.

(D) Unidentifiable liquid hydrocarbons recovered by a multiple operator produced water disposal system in excess of a tolerance ratio of one barrel of liquid hydrocarbons for each 2,000 barrels of produced water received shall be allocated to each producing property in the proportion that the volume of water received from the producing property bears to the total volume of water received by the system during a reporting period. The produced water disposal system operator shall notify the operator of each producing property of any allocations to that property by furnishing a copy of the allocations as shown on Form P-18 (Skim Oil/Condensate Report).

(E) The operator of each producing property shall report the volume of liquid hydrocarbons allocated to the producing property as production from the property on either Form P-1 (Producer's Monthly Report of Oil Wells) or Form P-2 (Producer's Monthly Report of Gas Wells). The volume allocated back shall be shown as skim oil or skim condensate on the appropriate form.

(3) Identifiable liquid hydrocarbon volumes.

(A) Identifiable liquid hydrocarbon volumes returned to the producing property during the reporting period in which the volume is received at the gas plant/produced water disposal facility shall not be reported to the Commission by the gas plant/facility operator. The gas plant/produced water disposal facility operator shall notify the appropriate Commission district office by telephone prior to the return of such volumes. The movement of these volumes back to the producing property shall comply with §3.85 of this title (relating to Manifest to Accompany Each Transport of Liquid Hydrocarbons by Vehicle), commonly referred to as Statewide Rule 85.

(B) Identifiable volumes not returned to the producing property shall be reported to the Commission and to the operator of the producing property on Form R-3 or Form P-18 as prescribed in paragraph (1) or (2) of this subsection. Volumes shall be specifically credited to the appropriate producing property. The operator of the producing property shall report the disposition of such identifiable volumes as either skim hydrocarbons or scrubber oil on the appropriate production report.

Source Note: The provisions of this §3.56 adopted to be effective January 10, 2000, 25 TexReg 80; amended to be effective November 24, 2004, 29 TexReg 10728

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.55	**Reports on Gas Wells Commingling Liquid Hydrocarbons before Metering**

(a) When the full well stream from a gas well is moved to a plant or central separation facilities, and the liquid hydrocarbons produced by two or more wells are commingled without being measured or metered from each gas well, the operator of each well so producing shall periodically file with the commission, as provided for in this section, a report showing the following information for each well:

(1) the specific gravity of the gas at 60 degrees Fahrenheit, after the removal of the liquid hydrocarbons;

(2) the API gravity corrected to 60 degrees Fahrenheit of the liquid hydrocarbons removed;

(3) the number of stock tank barrels of liquid hydrocarbons (corrected to 60 degrees Fahrenheit) recovered per 1,000 standard cubic feet of gas.

(b) Tests.

(1) The tests necessary for this report shall be made by one or more of the following methods:

(A) conventional mechanical separation;

(B) low temperature separation;

(C) split stream method;

(D) in accordance with AGA-NGAA Testing Code 101-43.

(2) The tests shall be made semiannually, or quarterly if contracts for royalty payments require quarterly tests. Semiannual tests must be made during the first and third or second and fourth quarters of the year. If a contract for royalty payments requires quarterly tests, the tests shall be made during each quarter. Both semiannual and quarterly tests may be made during any month of the quarter if the same (first, second, or third) month of each quarter is used thereafter for any well.

(c) The results of each test shall be submitted in duplicate on the appropriate commission form to the proper commission district office not later than the 15th day of each month following the month in which the test is made. The tests shall be required when the conditions set out in the first paragraph of this section exist, regardless of whether or not the conditions are an exception to §3.26 of this title (relating to Separating Devices, Tanks, and Surface Commingling of Oil) (Statewide Rule 26). The tests shall not be required, however, in any reservoir in which 100% of the operating and royalty ownership has been unitized.

(d) This section does not purport to alter any procedure for periodic tests of gas wells that has previously been approved by the commission. If test periods agreed upon by the interested parties have not been approved by the commission, and if the periods agreed upon differ from the test periods provided for in this section, alternative testing periods may be approved by the commission upon application.

Source Note: The provisions of this §3.55 adopted to be effective January 1, 1976; amended to be effective March 10, 1986, 11 TexReg 901; amended to be effective November 24, 2004, 29 TexReg 10728

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.54	**Gas Reports Required**

(a) Gas processing plant report. As soon after the first day of each calendar month as practicable, and never later than the 25th day of each calendar month, the operator of each plant manufacturing or extracting liquid hydrocarbons, including gasoline, butane, propane, condensate, kerosene, or other derivatives from natural gas, or refinery or storage vapors, shall file, in duplicate, in the Austin office, a report concerning the operation of the plant during the immediately preceding month, which must contain the data and information required on the form.

(b) Pressure maintenance and repressuring plant report.

(1) As soon after the first day of each month as practicable, but never later than the 15th day of each calendar month, the operator of each plant that returns natural gas to oil or gas producing reservoirs, or both, for the purpose of maintaining pressure or repressuring an oil or gas reservoir, but is not reporting such gas on any other commission approved form, shall file in duplicate in the district office a report concerning the operation of the plant during the immediately preceding month, which must contain the data and information required on the form.

(2) Pressure maintenance.

(A) The operator of each pressure-maintenance or repressuring plant shall file the report although no liquid hydrocarbons are recovered.

(B) The term "pressure-maintenance plant" or "repressuring plant" as used herein means any equipment or device, mechanical or otherwise, used for the purpose of returning any natural gas, residue gas from a gas processing plant, including plant and storage vapors, to an underground oil reservoir if the plant is operated as a separate unit. If pressure maintenance or repressuring operations are conducted as an integral part of a gas processing plant extracting, manufacturing, or recovering liquid hydrocarbons from natural gas or vapors, or both, the operations shall be reported by the operator of the processing plant.

(c) Producer's report of condensate and/or crude oil produced from gas wells. As soon as practicable after the first day, and never later than the last day of the calendar month, subsequent to the period of the report, the operator of each gas well from which liquids are recovered on the lease shall file the required form.

(d) Carbon black plant report. As soon as practicable after the first day and never later than the 15th day of each calendar month, each operator of a carbon black plant shall file a report. The report shall cover the operation of the plant for the immediately preceding month and shall be filed in duplicate in the district office.

(e) Monthly gas production report. As soon after the first day of each month as practicable, and never later than the last day of the calendar month, subsequent to the period of the report, every operator producing natural gas from wells classified as either gas wells or oil wells by the commission, except those expressly exempted by the commission shall file a report on the required form.

Source Note: The provisions of this §3.54 adopted to be effective January 1, 1976; amended to be effective February 23, 1979, 4 TexReg 436; amended to be effective May 7, 1991, 16 TexReg 2297.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.53	**Annual Well Tests and Well Status Reports Required**

(a) Oil wells.

(1) Unless otherwise provided for in this section, each operator of producing oil wells shall annually test each producing oil well for a 24-hour period during the test period specified on the well status report form and shall record all oil, gas and water volumes resulting from the test on the form.

(2) For any oil well capable of producing no more than five barrels of oil per 24-hour period, the operator of such well may report the required oil, gas and water volumes based on an allocation of that well's production on a prorated daily basis, rather than an actual well test. This option of using production allocation instead of actual well tests does not apply to surface-commingled wells, swabbed wells, the East Texas Field or the following Panhandle fields: Panhandle Carson County Field (Field Number 68845-001); Panhandle Collingsworth County Field (Field Number 68859-001); Panhandle Gray County Field (Field Number 68873-001); Panhandle Hutchison County Field (Field Number 68887-001); Panhandle Moore County field (Field Number 68901-001); Panhandle Potter County Field (Field Number 68915-001); and Panhandle Wheeler County Field (Field Number 68929-001).

(3) Each operator of a well or wells listed in the oil proration schedule shall file with the commission an oil well status report form in accordance with instructions on the form. All wells on a lease, and injection and disposal wells, must be reported.

(4) Changes in oil well status filed between regularly scheduled oil well status surveys shall be submitted on oil well status report forms in accordance with instructions thereon.

(b) Gas wells. Each operator of a gas well producing liquid hydrocarbons shall file with the commission gas well status reports in accordance with instructions thereon.

Source Note: The provisions of this §3.53 adopted to be effective January 1, 1976; amended to be effective November 21, 1980, 5 TexReg 4419; amended to be effective February 13, 1997, 22 TexReg 1313; amended to be effective January 10, 2000, 25 TexReg 79

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.52	**Oil Well Allowable Production**

(a) The daily allowable production of any lease or property shall not include production based upon the daily potential production of the field or area in which such well is located unless such well is actually on production, and such lease or property shall share in the total allowable production of the field or area, only to the extent of such well's actual ability to produce from day to day regardless of the rated potential production thereof according to the commission schedules.

(b) Production of a well in any one day shall not exceed 110% of the top well allowable as fixed by applicable rules and orders. Production and runs from a lease during the monthly allowable period shall not exceed 105% of the monthly allowable for the well or wells on the lease. However, the volume of oil that is produced and removed from the producing property as tolerance production shall be treated as overproduction and overruns shall be made up during the next succeeding month.

(c) All oil allowable volumes shall be measured in a manner consistent with §3.71 of this title (relating to Pipeline Tariffs) (Statewide Rule 71).

(d) A newly completed well coming into production during a proration period will be gauged either by a commission agent, or pipeline gauger if a commission agent is not available, if an offset lease owner witnesses the gauge taken by the pipeline gauger. The allowable production of such newly completed well shall be in addition to the existing total allowable production of the field as previously ascertained. The well whose allowable is thus fixed shall take its ratable share of production at the next succeeding schedule date according to rule.

(e) All oil produced from any well governed by any proration order of the commission shall be charged against the allowable daily production of such well regardless of the disposition which is made of the oil so produced.

(f) The operator of any lease or unitized area in the State of Texas may be permitted to produce the total allowable for any such lease or unitized area subject to the following provisions:

(1) The operator must submit an application to produce that total allowable on a lease or unit production basis to the commission with a plat showing the subject lease or unit as well as the adjacent properties thereto. Such plat shall identify properly all properties and wells. The applicant shall give written notice to all operators in the field when application is made for permission to produce on a lease basis in a field. If no protest is received by the commission within 15 days of the date of mailing, the application may be granted by administrative action. If protest is received, notice will be given and the matter set for hearing.

(2) The total daily allowable of the lease or unit shall be initially established as an allowable equal to the sum of the current allowables for all wells on the lease or unit. The allowable credited to any new or existing well may be increased to the top well allowable permitted by subsequently filing a new potential test on that well. The maximum total daily allowable of the lease or unit will be equal to the sum of the scheduled top allowables assignable to each well for its proration unit.

(3) The total daily allowable of the lease or unit may be produced in any quantity from any well or

combination of wells with the exception that wells nearer than a regular location from a lease or unit line shall not be permitted to produce more than their normal allowables and wells at a distance of a regular location from a lease or unit line shall not be produced at a rate of more that two times the top allowable for such well unless waivers of objection to rates in excess of this limit have been obtained from the operators of wells offsetting the well.

(4) Annual well test or allocation:

(A) An annual well test, or an allocation pursuant to §3.53(a)(2) of this title (relating to Annual Well Tests and Well Status Reports Required) shall be made and reported on the oil well status report form on each lease or unit property to which a lease production basis has been granted showing an individual well test or allocation on each oil well on the property made during the prescribed test period determined by the commission. Annual well tests may be witnessed by offset operators. An offset operator that desires to witness an annual well test shall give the testing operator written notice of its desire to witness the next scheduled annual well test of a specific well. A testing operator that has received prior written notice that an offset operator desires to witness an annual well test shall give that offset operator at least 24 hours advance notice of the date of the next annual well test for that well. The Commission will use the test or allocation data in the preparation of the oil proration schedule. The total schedule daily lease allowable shall be the sum of the individual well allowables as determined under applicable rules and the lease production basis shall be designated on the oil proration schedule by an appropriate symbol. All wells on the lease for which an allowable is requested shall have their production volumes reported pursuant to §3.53(a).

(B) Any producing well with a gas-oil ratio in excess of that permitted by the applicable rules shall have its daily allowable calculated by dividing the producing gas-oil ratio into the daily gas limit of the well.

(5) The Commission shall continue to require special tests in cases of commingled production where individual lease apportionment is determined by this method. Other special tests may be required as the Commission deems necessary.

(6) In the event that the monthly gas production of the lease or unit exceeds the permissible monthly lease gas limit, the volume of gas in excess of the lease gas limit shall be considered overproduction and must be made up by underproduction of the lease gas limit. Whenever the overproduced amount equals the next month's lease gas limit the overproduced amount shall immediately be reduced to zero by shutting in the lease or by other means acceptable to the Commission.

(7) The East Texas Field is excluded from the provisions of this section.

Source Note: The provisions of this §3.52 adopted to be effective January 1, 1976; amended to be effective May 1, 1991, 16 TexReg 2095; amended to be effective February 18, 1994, 19 TexReg 783; amended to be effective February 13, 1997, 22 TexReg 1313; amended to be effective January 10, 2000, 25 TexReg 79; amended to be effective November 24, 2004, 29 TexReg 10728

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.51	**Oil Potential Test Forms Required**

(a) A potential test form with all information requested thereon filled in shall be filed in the district office not later than 10 days after the test is completed. If the operator fails to file a potential test in an acceptable form within the 10-day period, then the effective date of the allowable resulting from the test shall not extend back more than 10 days prior to the date that the test form, properly completed, is filed in the district office. The 10-day provision shall govern regardless of whether the potential test is taken during the month in which it is received in the district office or any prior month.

(b) The initial potential test form for any new completion or recompletion must be accompanied by the well record.

Source Note: The provisions of this §3.51 adopted to be effective January 1, 1976.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.50	**Enhanced Oil Recovery Projects--Approval and Certification for Tax Incentive**

(a) Purpose. The purpose of this section is to provide a procedure by which an operator can obtain Railroad Commission approval and certification of enhanced oil recovery (EOR) projects pursuant to the Tax Code, Title 2, Chapter 202, Subchapter B, §202.052 and §202.054.

(b) Applicability.

(1) This section applies to:

(A) new EOR projects and the change from secondary EOR projects to tertiary projects which qualify as new EOR projects, and which begin active operation on or after September 1, 1989; and

(B) expansions of existing EOR projects.

(2) An EOR project may not qualify as an expansion if the project has qualified as a new EOR project under this section.

(c) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Active operation--The start and continuation of a fluid injection program for a secondary or tertiary recovery project to enhance the displacement process in the reservoir. Applying for permits and moving equipment into the field alone are not considered active operations.

(2) Commission--The Railroad Commission of Texas.

(3) Commission representative--A commission employee authorized to act for the commission. Any authority given to a commission representative is also retained by the commission. Any action taken by the commission representative is subject to review by the commission.

(4) Comptroller--The Comptroller of Public Accounts.

(5) Enhanced oil recovery project (EOR)--The use of any process for the displacement of oil from the reservoir other than primary recovery and includes the use of an immiscible, miscible, chemical, thermal, or biological process. This term does not include pressure maintenance or water disposal projects.

(6) Existing enhanced recovery project--An EOR project that has begun active operation but was not approved by the Commission as a new EOR project.

(7) Expanded enhanced recovery project or expansion--The addition of injection and producing wells, the change of injection pattern, or other commission approved operating changes to an existing enhanced oil recovery project that will result in the recovery of oil that would not otherwise be recovered.

(8) Fluid injection--Injection through an injection well of a fluid (liquid or gaseous) into a producing

formation as part of an EOR project.

(9) Incremental production--The volume of oil produced by an expanded enhanced recovery project in excess of the production decline rate established under conditions before expansion of an existing enhanced recovery project.

(10) Oil recovery from an enhanced recovery project--The oil produced from the designated area the commission certifies to be affected by the project.

(11) Operator--The person recognized by the commission as being responsible for the actual physical operation of an EOR project and the wells associated with the EOR project.

(12) Positive production response--Occurs when the rate of oil production from wells within the designated area affected by an EOR project is greater than the rate that would have occurred without the project.

(13) Pressure maintenance--The injection of fluid into the reservoir for the purpose of maintaining the reservoir pressure at or near the bubble point or other critical pressure wherein fluid injection volumes are not sufficient to refill existing reservoir voidage in the approved project area and displace oil that would not be displaced by primary recovery operations.

(14) Primary recovery--The displacement of oil from the reservoir into the wellbore(s) by means of the natural pressure of the oil reservoir, including artificial lift.

(15) Production decline rate--The projected future oil production from a project area as extrapolated by a method approved by the commission.

(16) Recovered oil tax rate--The tax rate provided by the Tax Code, §202.052(b).

(17) Secondary recovery project--An enhanced recovery project that is not a tertiary recovery project.

(18) Termination--Occurs when the approved fluid injection program associated with an EOR project stops or is discontinued.

(19) Tertiary recovery project--An EOR project using a tertiary recovery method (as defined in the federal June 1979 energy regulations referred to in the Internal Revenue Code of 1986, §4993, or approved by the United States secretary of the treasury for purposes of administering the Internal Revenue Code of 1986, §4993, without regard to whether that section remains in effect) including those listed as follows:

(A) Alkaline (or caustic) flooding--An augmented waterflooding technique in which the water is made chemically basic as a result of the addition of alkali metals.

(B) Carbon dioxide augmented waterflooding--Injection of carbonated water, or water and carbon dioxide, to increase waterflood efficiency.

(C) Cyclic steam injection--The alternating injection of steam and production of oil with condensed steam from the same well or wells.

(D) Immiscible carbon dioxide displacement--Injection of carbon dioxide into an oil reservoir to effect oil displacement under conditions in which miscibility with reservoir oil is not obtained.

(E) In situ combustion--Combustion of oil in the reservoir, sustained by continuous air injection, to displace unburned oil toward producing wells.

(F) Microemulsion, or micellar/emulsion, flooding--An augmented waterflooding technique in which a surfactant system is injected in order to enhance oil displacement toward producing wells. A surfactant system normally includes a surfactant, hydrocarbon, cosurfactant, an electrolyte and water, and polymers for mobility control.

(G) Miscible fluid displacement--An oil displacement process in which gas or alcohol is injected into an oil reservoir, at pressure levels such that the injected gas or alcohol and reservoir oil are miscible. The process may include the concurrent, alternating, or subsequent injection of water. The injected gas may be natural gas, enriched natural gas, a liquefied petroleum gas slug driven by natural gas, carbon dioxide, nitrogen, or flue gas. Gas cycling, i.e., gas injection into gas condensate reservoirs, is not a miscible fluid displacement technique nor a tertiary enhanced recovery technique within the meaning of this section.

(H) Polymer augmented waterflooding--Augmented waterflooding in which organic polymers are injected with the water to improve a real and vertical sweep efficiency.

(I) Steam drive injection--The continuous injection of steam into one set of wells (injection wells) or other injection source to effect oil displacement toward and production from a second set of wells (production wells).

(20) Water disposal project--The injection of produced water into the reservoir for the purpose of disposing of the produced water wherein the water injection volumes are not sufficient to refill existing reservoir voidage in the approved project area and displace oil that would not be displaced by primary recovery operations.

(d) Application requirements. To qualify for the recovered oil tax rate the operator shall:

(1) submit an application for approval on the appropriate form. All applications must be filed at the Commission's Austin office. The form shall be executed and certified by a person having knowledge of the facts entered on the form. If an application is already on file under the Natural Resources Code, Chapter 101, Subchapter B, or for approval as a tertiary recovery project for purposes of the Internal Revenue Code of 1986, §4993, the operator may file a new EOR project and area designation application if the active operation of the project does not begin before the application under this section is approved by the Commission;

(2) submit all necessary forms to the Oil and Gas Division and provide the Commission with any relevant information required to administer this section such as: area plats showing the proposed project area and all injection and producing wells within the area, production and injection history, planned enhanced oil recovery procedures, and any other pertinent data;

(3) obtain a unitization agreement if required for purposes of carrying out the project under the Natural Resources Code, Chapter 101, Subchapter B. The Commission may not approve the project unless the unitization is approved; and

(4) submit an application on the appropriate form and obtain the necessary permits to conduct fluid injection operations pursuant to §3.46 of this title (relating to Fluid Injection into Productive Reservoirs) (Statewide Rule 46), if such permits have not already been obtained.

(e) Concurrent applications. The operator may file concurrently:

(1) an application for approval of a new or expanded EOR project under this section, together with;

(2) an application for approval of a unitization agreement for purposes of carrying out the enhanced oil

recovery project under the Natural Resources Code, §§101.001 et seq.; or

(3) an application for approval for certification of the project as a tertiary recovery project.

(f) Opportunity for hearing. A commission representative may administratively approve the application. If the commission representative denies administrative approval, the applicant shall have the right to a hearing upon request. After hearing, the examiner shall recommend final action by the commission.

(g) Approval and certification.

(1) Project approval. In order to be eligible for the recovered oil tax rate as provided in the Tax Code, §202.052(b), the operator shall apply for and be granted Commission approval of a new EOR project or an expansion of an existing EOR project, prior to commencing active operation of the new project or expanded project. For a project to be approved the operator shall:

(A) prove that it qualifies as an EOR project;

(B) designate the area to be affected by the project and obtain Commission approval of the designation; and

(C) if production from the wells within the project area is reported with production from wells not in the project area, designate the method to account for and report production from the project area.

(2) Positive production response certificate.

(A) The operator of an EOR project that meets the requirements of this section shall demonstrate to the Commission a positive oil production response before the operator can receive Commission certification of such a positive production response. The certification date may be any date desired by the operator, subject to Commission approval, following the date on which a positive oil production response first occurred. The operator shall apply for a positive production response certificate within three years of project approval for secondary projects, and within five years of project approval for tertiary projects, to qualify for the recovered oil tax rate. The oil produced from the designated area of a new EOR project or incremental oil produced from the designated area of an expanded EOR project after the date of certification of a positive production response is eligible for the recovered oil tax rate. The operator shall apply to the comptroller pursuant to the Tax Code, §202.052 and §202.054, to qualify for the recovered oil tax rate.

(B) The application for positive response certification shall include:

(i) production and injection graphs with supporting tabular data illustrating a positive production response and volumes of water or other substances that have been injected on the designated area since the initiation of the new or the expanded EOR project;

(ii) a plat of the affected area showing all injection and producing wells, with completion dates; and

(iii) any other data requested by the Oil and Gas Division.

(C) The application for the positive production response certificate shall be processed administratively. If the Commission representative denies administrative approval, the applicant shall have the right to a hearing upon request. After hearing, the examiner shall recommend final action by the Commission.

(h) Annual reporting.

(1) The operator shall file an annual report on the appropriate form with the Oil and Gas Division each year

the project remains eligible for the reduced severance tax rate. This form shall be filed within 30 days of the first anniversary of the date that the Commission acted on the EOR positive production response certification application and annually thereafter.

(2) The report shall contain the following:

(A) Commission certification date of positive production response;

(B) monthly volume of injected fluid(s);

(C) number of well(s) used for injection;

(D) monthly production of oil, gas, and water;

(E) number of active producing wells; and

(F) any other relevant information requested by the Oil and Gas Division.

(i) Reduced or enlarged areas. The operator may apply for reduced or enlarged project area certification if the application for reduction or enlargement is received prior to the filing of an application for positive production response certification of the original enhanced oil recovery project.

(j) Termination and penalty. Upon approval by the Commission and the comptroller, the recovered oil tax rate shall continue for a maximum of 10 years, unless the project is sooner terminated. If the project is terminated prior to the 10-year period, the operator shall notify the Commission and the comptroller in writing within 30 days after the last day of active operations. Failure to so notify may result in civil penalties, interest, and the tax due. If the Commission determines a project has been terminated or there is action that affects the tax rate, it shall notify the comptroller immediately in writing.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.49	**Gas-Oil Ratio**

(a) Any oil well producing with a gas-oil ratio in excess of 2,000 cubic feet of gas per barrel of oil produced shall be allowed to produce daily only that volume of gas obtained by multiplying its maximum daily oil allowable, as determined by the allocation formula applicable to the well, by 2,000. The gas volume thus obtained shall be known as the daily gas limit of the well. The daily oil allowable of the well shall then be determined by dividing its daily gas limit, obtained as provided in this section, by its producing gas-oil ratio in cubic feet per barrel of oil produced.

(b) Any gas well producing from the same reservoir in which oil wells are completed and producing shall be allowed to produce daily only that amount of gas which is the volumetric equivalent in reservoir displacement of the gas and oil produced from the oil well in the reservoir that withdraws the maximum amount of gas in the production of its daily oil allowable.

(1) The following formula shall be used in the determination of the allowable of a gas well producing with a gas-oil ratio of 100,000 or more.

Attached Graphic

(2) The following formula shall be used in the determination of the allowable of a gas well producing with a gas-oil ratio of less than 100,000 under the provisions of the rule stated.

Attached Graphic

(3) The allowable for an associated gas well as determined by this subsection shall be limited to the lesser of:

(A) the gas well allowable as calculated by paragraph (1) or (2) of this subsection;

(B) the well's capability as determined by §3.31(e) of this title (relating to Gas Reservoirs and Gas Well Allowable) (Statewide Rule 31); or

(C) the highest monthly production during those months averaged to a daily amount for wells that reported production during any of the three most recently reported production months.

(c) The necessary reservoir data shall be obtained from the file of the most recent MER hearing or shall be estimated by the commission unless more recent information is submitted by the operators.

(d) If the gas produced from an oil reservoir is returned to the same reservoir from which it was produced, only the volume of gas not returned to the reservoir shall be considered in applying the rule stated.

(e) Associated gas wells.

(1) Subsection (b) of this section will not be applicable to associated gas wells in reservoirs for which unlimited net gas-oil ratio authority has been granted for oil wells, where such net gas is defined as total gas produced less gas diverted to legal uses; however, this subsection does not apply to reservoirs where net gas

is defined as total gas produced less gas returned to the reservoir from which it was produced, or where special field rules have been adopted for associated gas wells, or where a total gas volume limitation is placed upon the oil well producing under a net ratio, except that each associated gas well in such a reservoir shall be entitled to an additional gas voidage not to exceed the limitation placed upon the net ratio authority granted and the facts are shown on the current oil proration schedule for the field.

(2) Allowables for associated gas wells producing from reservoirs that are subject to an unlimited net gas-oil ratio authority will be dropped from the associated gas well schedule, effective that date such an unlimited net gas-oil ratio is authorized for any oil well in such reservoir.

(f) All gas-oil ratios determined by test or allocation shall be reported on the oil well status report form in accordance with instructions thereon and the provisions of §3.53(a) of this title (relating to Annual Well Tests and Well Status Reports Required).

(g) Allowables.

(1) No well shall have its allowable curtailed below the allowable fixed by the applicable field rules and the general statewide market demand order, unless such well is incapable of producing this allowable on a calendar day basis.

(2) Any well that has a gas-oil ratio in excess of the prescribed ratio for the field in which it is located will have its schedule daily allowable penalized due to such ratio.

Source Note: The provisions of this §3.49 adopted to be effective January 1, 1976; amended to be effective July 1, 1992, 17 TexReg 3236; amended to be effective February 13, 1997, 22 TexReg 1313; amended to be effective November 24, 2004, 29 TexReg 10728

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.48	**Capacity Oil Allowables for Secondary or Tertiary Recovery Projects**

(a) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Capacity oil allowable--The allowable assigned from time to time by the director of the Oil and Gas Division or the director's delegate to an oil lease or unit engaged in a secondary or tertiary recovery program, that is consistent with the ability of the lease or unit to produce and that will prevent the occurrence of overproduced status for the lease or unit. Capacity oil allowables encompass and supercede what the Railroad Commission formerly designated as waterflood allowables.

(2) Offsetting operators and unleased mineral interest owners affected by the application--All offsetting operators and unleased mineral interest owners to the lease or unit except for those offsetting operators and unleased mineral owners the director of the Oil and Gas Division or the director's delegate determines to be unaffected by the application.

(b) Application. The director of the Oil and Gas Division or the director's delegate may grant a capacity oil allowable for a lease or unit, to the operator of a secondary or tertiary recovery project, when evidence of production increase in response to the secondary or tertiary recovery project is noted. The operator's application for a capacity oil allowable shall consist of:

(1) a written request that shall contain a statement indicating that all offsetting operators and unleased mineral interest owners affected by the application have been sent a copy of the complete application, and a list of such offsetting operators and unleased mineral interest owners indicating the date that notification was sent;

(2) evidence of the operator's participation in the subject secondary or tertiary recovery project;

(3) a plat indicating all producing wells and injection wells on the lease or unit and all offsetting operators and unleased mineral interest owners to the lease or unit;

(4) if available, signed waivers of objection from all offsetting operators and unleased mineral interest owners affected by the application; and

(5) a production graph illustrating both increased production and volumes of water or other substances used in the secondary or tertiary recovery project that have been injected on the lease or unit since initiation of the secondary or tertiary recovery project.

(c) Notice and hearing. If the operator does not submit signed waivers of objection from all offsetting operators and unleased mineral interest owners affected by the application, there shall be a minimum of 21 days notice of the application for a capacity oil allowable; provided that, if the operator requests a hearing to consider the application, such hearing shall be held only after at least 10 days notice. If the director of the Oil and Gas Division or the director's delegate declines to approve the initial application, or if a protest is received by the Oil and Gas Division within the prescribed notice period, the operator may request a hearing to show that the capacity oil allowable is necessary either to prevent waste or to protect correlative rights. Any hearing held pursuant to this section shall be held only after at least 10 days notice. If the operator submits signed waivers of objection from all offsetting operators and unleased mineral interest owners affected by the application, or if no protest is received by the Oil and Gas Division within the 21-day notice period, or if no protestant appears at a hearing to consider an application for a capacity oil allowable, the capacity oil allowable may be granted administratively by the director of the Oil and Gas Division or the director's delegate if the application establishes that the capacity oil allowable is necessary to ensure maximum recovery from the secondary or tertiary recovery project.

(d) Temporary basis. A capacity oil allowable may be granted on a temporary basis by the director of the Oil and Gas Division or the director's delegate upon receipt of a complete application indicating that an immediate allowable increase is necessary to ensure maximum recovery from the secondary or tertiary recovery project. If a hearing is held to consider the application, any capacity oil allowable previously granted on a temporary basis under this section will remain in effect until a signed order of the Railroad Commission is issued in the matter. If the commission order denies the application, or if an applicant fails to request a hearing to consider a protested application, additional production resulting from the capacity oil allowable granted on a temporary basis will be treated as overproduction.

Source Note: The provisions of this §3.48 adopted to be effective March 28, 1988, 13 TexReg 1257.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.47	**Allowable Transfers for Saltwater Injection Wells**

An allowable transfer will not be authorized for a well converted from oil production to saltwater disposal; however, an operator may make application to use the well for dual-purpose waterflood and saltwater disposal if injection is into an oil productive zone, and it is shown that the water injection will not injure the reservoir but will probably be of benefit to the reservoir as a secondary recovery program even though the beneficial effect of the water injection cannot be readily determined.

Source Note: The provisions of this §3.47 adopted to be effective January 1, 1976.

Next Rule>>

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.46	**Fluid Injection into Productive Reservoirs**

(a) Permit required. Any person who engages in fluid injection operations in reservoirs productive of oil, gas, or geothermal resources must obtain a permit from the commission. Permits may be issued when the injection will not endanger oil, gas, or geothermal resources or cause the pollution of freshwater strata unproductive of oil, gas, or geothermal resources. Permits from the commission issued before the effective date of this section shall continue in effect until revoked, modified, or suspended by the commission.

(b) Filing of application.

(1) Application. An application to conduct fluid injection operations in a reservoir productive of oil, gas, or geothermal resources shall be filed in Austin on the form prescribed by the commission accompanied by the prescribed fee. On the same date, one copy shall be filed with the appropriate district office. The form shall be executed by a party having knowledge of the facts entered on the form. The applicant shall file the freshwater injection data form if fresh water is to be injected.

(2) Commercial disposal well. An applicant for a permit to dispose of oil and gas waste in a commercial disposal well shall clearly indicate on the application and in the notice of application that the application is for a commercial disposal well permit. For the purposes of this rule, "commercial disposal well" means a well whose owner or operator receives compensation from others for the disposal of oil field fluids or oil and gas wastes that are wholly or partially trucked or hauled to the well, and the primary business purpose for the well is to provide these services for compensation.

(c) Notice and opportunity for hearing.

(1) The applicant shall give notice by mailing or delivering a copy of the application to affected persons who include the owner of record of the surface tract on which the well is located; each commission-designated operator of any well located within one half mile of the proposed injection well; the county clerk of the county in which the well is located; and the city clerk or other appropriate city official of any city where the well is located within the corporate limits of the city, on or before the date the application is mailed to or filed with the commission. For the purposes of this section, the term "of record" means recorded in the real property or probate records of the county in which the property is located.

(2) In addition to the requirements of subsection (c)(1), a commercial disposal well permit applicant shall give notice to owners of record of each surface tract that adjoins the proposed injection tract by mailing or delivering a copy of the application to each such surface owner.

(3) If, in connection with a particular application, the commission or its delegate determines that another class of persons should receive notice of the application, the commission or its delegate may require the applicant to mail or deliver a copy of the application to members of that class. Such classes of persons could include adjacent surface owners or underground water conservation districts.

(4) In order to give notice to other local governments, interested, or affected persons, notice of the application shall be published once by the applicant in a newspaper of general circulation for the county where the well will be located in a form approved by the commission or its delegate. The applicant shall file

with the commission in Austin proof of publication prior to the hearing or administrative approval.

(5) Protested applications:

(A) If a protest from an affected person or local government is made to the commission within 15 days of receipt of the application or of publication, whichever is later, or if the commission or its delegate determines that a hearing is in the public interest, then a hearing will be held on the application after the commission provides notice of hearing to all affected persons, local governments, or other persons, who express an interest, in writing, in the application.

(B) For purposes of this section, "affected person" means a person who has suffered or will suffer actual injury or economic damage other than as a member of the general public or as a competitor, and includes surface owners of property on which the well is located and commission-designated operators of wells located within one-half mile of the proposed disposal well.

(6) If no protest from an affected person is received by the commission, the commission's delegate may administratively approve the application. If the commission's delegate denies administrative approval, the applicant shall have a right to a hearing upon request. After hearing, the examiner shall recommend a final action by the commission.

(d) Subsequent commission action.

(1) An injection well permit may be modified, suspended, or terminated by the commission for just cause after notice and opportunity for hearing, if:

(A) a material change of conditions occurs in the operation or completion of the injection well, or there are material changes in the information originally furnished;

(B) fresh water is likely to be polluted as a result of continued operation of the well;

(C) there are substantial violations of the terms and provisions of the permit or of commission rules;

(D) the applicant has misrepresented any material facts during the permit issuance process;

(E) injected fluids are escaping from the permitted injection zone; or

(F) waste of oil, gas, or geothermal resources is occurring or is likely to occur as a result of the permitted operations.

(2) An injection well permit may be transferred from one operator to another operator provided that the commission's delegate does not notify the present permit holder of an objection to the transfer prior to the date the lease is transferred on commission records.

(3) Voluntary permit suspension.

(A) An operator may apply to temporarily suspend its injection authority by filing a written request for permit suspension with the commission in Austin, and attaching to the written request the results of an MIT test performed during the previous three-month period in accordance with the provisions of subsection (j)(4) of this section. The provisions of this paragraph shall not apply to any well that is permitted as a commercial injection well.

(B) The commission or its delegate may grant the permit suspension upon determining that the results of the MIT test submitted under subparagraph (A) of this paragraph indicate that the well meets the performance standards of subsection (j)(4) of this section.

(C) During the period of permit suspension, the operator shall not use the well for injection or disposal purposes.

(D) During the period of permit suspension, the operator shall comply with all applicable well testing requirements of §3.14 of this title (relating to plugging, and commonly referred to as Statewide Rule 14) but need not perform the MIT test that would otherwise be required under the provisions of subsection (j)(4) of this section or the permit. Further, during the period of permit suspension, the provisions of subsection (i)(1) - (3) of this section shall not apply.

(E) The operator may reinstate injection authority under a suspended permit by filing a written notification with the commission in Austin. The written notification shall be accompanied by an MIT test performed during the three-month period prior to the date notice of reinstatement is filed. The MIT test shall have been performed in accordance with the provisions and standards of subsection (j)(4) of this section.

(e) Area of Review.

(1) Except as otherwise provided in this subsection, the applicant shall review the data of public record for wells that penetrate the proposed disposal zone within a 1/4 mile radius of the proposed disposal well to determine if all abandoned wells have been plugged in a manner that will prevent the movement of fluids from the disposal zone into freshwater strata. The applicant shall identify in the application any wells which appear from such review of public records to be unplugged or improperly plugged and any other unplugged or improperly plugged wells of which the applicant has actual knowledge.

(2) The commission or its delegate may grant a variance from the area-of-review requirements of paragraph (1) of this subsection upon proof that the variance will not result in a material increase in the risk of fluid movement into freshwater strata or to the surface. Such a variance may be granted for an area defined both vertically and laterally (such as a field) or for an individual well. An application for an areal variance need not be filed in conjunction with an individual permit application or application for permit amendment. Factors that may be considered by the commission or its delegate in granting a variance include:

(A) the area affected by pressure increases resulting from injection operations;

(B) the presence of local geological conditions that preclude movement of fluid that could endanger freshwater strata or the surface; or

(C) other compelling evidence that the variance will not result in a material increase in the risk of fluid movement into freshwater strata or to the surface.

(3) Persons applying for a variance from the area-of-review requirements of paragraph (1) of this subsection on the basis of factors set out in paragraph (2)(B) or (C) of this subsection for an individual well shall provide notice of the application to those persons given notice under the provisions of subsection (c)(1) of this section. The provisions of subsection (c) of this section shall apply in the case of an application for a variance from the area-of-review requirements for an individual well.

(4) Notice of an application for an areal variance from the area-of-review requirements under paragraph (1) of this subsection shall be given on or before the date the application is filed with the commission:

(A) by publication once in a newspaper having general circulation in each county, or portion thereof, where the variance would apply. Such notice shall be in a form approved by the commission or its delegate prior to publication and must be at least three inches by five inches in size. The notice shall state that protests to the application may be filed with the commission during the 15-day period following the date of publication. The notice shall appear in a section of the newspaper containing state or local news items;

(B) by mailing or delivering a copy of the application, along with a statement that any protest to the application should be filed with the commission within 15 days of the date the application is filed with the commission, to the following:

(i) the manager of each underground water conservation district in which the variance would apply, if any;

(ii) the city clerk or other appropriate official of each incorporated city in which the variance would apply, if any;

(iii) the county clerk of each county in which the variance would apply; and

(iv) any other person or persons that the commission or its delegate determines should receive notice of the application.

(5) If a protest to an application for an areal variance is made to the commission by an affected person, local government, underground water conservation district, or other state agency within 15 days of receipt of the application or of publication, whichever is later, or if the commission's delegate determines that a hearing on the application is in the public interest, then a hearing will be held on the application after the commission provides notice of the hearing to all local governments, underground water conservation districts, state agencies, or other persons, who express an interest, in writing, in the application. If no protest from an affected person is received by the commission, the commission's delegate may administratively approve the application. If the application is denied administratively, the person(s) filing the application shall have a right to hearing upon request. After hearing, the examiner shall recommend a final action by the commission.

(6) An areal variance granted under the provisions of this subsection may be modified, terminated, or suspended by the commission after notice and opportunity for hearing is provided to each person shown on commission records to operate an oil or gas lease in the area in which the proposed modification, termination, or suspension would apply. If a hearing on a proposal to modify, terminate, or suspend an areal variance is held, any applications filed subsequent to the date notice of hearing is given must include the area-of-review information required under paragraph (1) of this subsection pending issuance of a final order.

(f) Casing. Injection wells shall be cased and the casing cemented in compliance with §3.13 of this title (relating to Casing, Cementing, Drilling, and Completion Requirements) in such a manner that the injected fluids will not endanger oil, gas, or geothermal resources and will not endanger freshwater formations not productive of oil, gas, or geothermal resources.

(g) Special equipment.

(1) Tubing and packer. Wells drilled or converted for injection shall be equipped with tubing set on a mechanical packer. Packers shall be set no higher than 200 feet below the known top of cement behind the long string casing but in no case higher than 150 feet below the base of usable quality water. For purposes of this section, the term "tubing" refers to a string of pipe through which injection may occur and which is neither wholly nor partially cemented in place. A string of pipe that is wholly or partially cemented in place is considered casing for purposes of this section.

Cont'd...

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.45	**Oil Allowables**

(a) Oil allowable yardsticks.

(1) 1947 allowable yardstick. The following schedule allowable shall be assigned all wells according to depth of the reservoir and proration unit size authorized by the commission upon expiration of the discovery allowable, if discovery of the field occurred prior to January 1, 1965, provided that paragraph (3) of this subsection does not apply.

Attached Graphic

(2) 1965 allowable yardstick. The following schedule allowable shall be assigned all wells according to depth of the reservoir and proration unit size authorized by the commission upon expiration of the discovery allowable, if discovery of the field occurred on or after January 1, 1965.

Attached Graphic

(3) Exception. Wells in fields discovered prior to January 1, 1965, whose discovery allowables either have expired or will expire subsequent to July 1, 1964, upon expiration of the discovery allowable, may be assigned allowable pursuant to the 1965 yardstick, if such allowables exceed those which would be assigned pursuant to the 1947 yardstick, or if the proration unit size authorized by the commission is not provided for in the 1947 yardstick. It is provided that any adjustment made in allowable assignment pursuant to this paragraph shall not be made prior to the effective date of this order. Retroactive adjustment shall not be allowed.

(4) Texas offshore allowable yardstick.

Attached Graphic

(b) Assignment of allowables for wells under statewide rules.

(1) All wells completed in fields operating under statewide rules which were assigned the 20-acre yardstick allowable prior to the adoption of the new spacing rule on October 1, 1962, will be continued at the same allowable rate unless, after notice and hearing, special rules or other special orders are adopted that would provide for a higher producing rate. Any new well completed in such a reservoir will be given the same allowable rate as is assigned the other wells even though it has been drilled as a regular location under the new statewide spacing rule and density rule.

(2) All wells completed in fields operating under statewide rules that are presently on discovery status or have had discovery status terminated subsequent to the adoption of the new state spacing rule on October 1, 1962, will be given the 40-acre yardstick allowable, until such time as a change is ordered by the commission.

(c) Production of marginal wells.

(1) To artificially curtail the production of any "marginal well" below the marginal limit prior to its ultimate plugging and abandonment is hereby declared to be waste, and no rule or order of the Railroad Commission of Texas, or other constituted legal authority shall be entered requiring restriction of the production of any "marginal well" as defined in this chapter.

(2) Application of paragraph (1) of this subsection shall be confined to unrestricted operating conditions which accord with established operating rules of the commission, and shall be subject to all operating conditions designed to prevent waste imposed by the commission, which conditions apply to all wells alike. (Reference Order Number 20-54,115, effective January 1, 1965.)

Source Note: The provisions of this §3.45 adopted to be effective January 1, 1976; amended to be effective March 10, 1986, 11 TexReg 901

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.42	**Oil Discovery Allowable**

(a) The commission shall determine the discovery allowable rate for oil wells proven to be completed in a new and separate reservoir from the following discovery allowable schedule.

Attached Graphic

(b) Duration and exemption from market demand limitation.

(1) Onshore. Each oil well completed in an oil reservoir determined by the commission to be a new onshore oil field onshore may receive, as a maximum daily, its discovery allowable, exempt from market demand limitation, for a period of 24 months (36 months for depth intervals deeper than 10,000 feet) from the date of assignment of the oil allowable to such discovery well or until the 11th oil well has been completed therein, whichever occurs first.

(2) Offshore. Each oil well completed in an oil reservoir determined by the commission to be a new offshore oil field may receive, as a maximum daily allowable, its discovery oil allowable, exempt from market demand limitation, for a period of 24 months (36 months for depth intervals deeper than 10,000 feet) from the date of assignment of the oil allowable to such discovery well or until the sixth oil well has been completed therein, whichever occurs first.

(c) The director or the director's delegate shall review the production performance of discovery wells to evaluate whether waste is occurring due to the discovery allowable. If the director or the director's delegate believes waste is or may be occurring, the director or the director's delegate may request any additional relevant information from the operator and may set the matter for hearing to allow the commission to determine if the discovery allowable should be lowered to prevent waste.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.41	**Application for New Oil or Gas Field Designation and/or Allowable**

(a) The commission shall assign a new field designation and/or discovery allowable after an operator furnishes to the commission's Austin office proper evidence, other than horizontal distance, proving that a well is a new discovery. An operator shall include the following in the application:

(1) a legible area map, drawn to scale, preferably on white paper, which shows the following:

(A) all oil, gas, and abandoned wells within at least a 2 1/2-mile radius of the well claimed to be a discovery well;

(B) the producing intervals of all pertinent oil and gas wells identified in subparagraph (A) of this paragraph;

(C) all commission-recognized fields within a 2 1/2-mile radius of the well claimed to be a discovery well, that are presently active or were active in the past, identified by commission-assigned field names, names of the producing formations, and approximate average depth of the producing interval;

(D) the total depth of all wells identified in subparagraph (A) of this paragraph that penetrated the subject zone;

(E) scale, legend, and name of person who prepared the map;

(2) a complete legible electric log of the well. However, an operator is not required to file a complete electric log if the operator has filed all other required data, a portion of the log showing the top and bottom of the proposed reservoir interval, log headings, and applicable scales, and satisfactorily proves discovery as a new reservoir. Any electric log filed shall be considered public information pursuant to §3.16 of this title (relating to Log and Completion or Plugging Report) (Statewide Rule 16).

(3) a bottom-hole pressure for oil wells, submitted on the appropriate form. This bottom-hole pressure may be determined by a pressure build-up test, drill stem test, or wire- line formation tester. Calculations based on fluid level surveys or calculations made on flowing wells using shut-in wellhead pressures may be used if no test data is available.

(4) a subsurface structure map and/or cross section(s), if separation is based on structural differences, including faulting and pinch-outs. The structure map shall show the contour of the top of the producing formation and the line(s) of cross section. The cross section(s) shall be prepared from comparable electric logs (not tracings) with the wells, producing formation, and hydrocarbon reservoir identified. The engineer or geologist who prepared the map and cross section shall sign them.

(5) reservoir pressure measurements or calculations, if separation is based on pressure differentials.

(6) core data, drillstem test data, cross sections of nearby wells, and/or production data estimating the fluid level, if separation is based on differences in fluid levels. The operator shall obtain the fluid level data

within 10 days of the potential test date.

(b) The staff may require additional data deemed necessary to make a determination. Deviation from the requirements of subsection (a) of this section may be allowed at the staff's discretion.

(c) The director, oil and gas, may administratively grant an application if all required data is submitted with the form prescribed, and the evidence proves that the new reservoir is effectively separated from any other reservoir previously shown to be productive.

(d) If the director of the Oil and Gas Division, or the director's delegate, declines administratively to grant an application, the operator may request a hearing. If the commission receives the hearing request within 10 days of the date of the notice of administrative denial of the application, the commission shall schedule a hearing. After hearing, the examiner shall recommend final commission action.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.40	**Assignment of Acreage to Pooled Development and Proration Units**

(a) An operator may pool acreage, in accordance with appropriate contractual authority and applicable field rules, for the purpose of creating a drilling unit or proration unit by filing an original certified plat delineating the pooled unit and a Certificate of Pooling Authority, Form P-12 (revised 5/2001), according to the following requirements:

(1) Each tract in the certified plat shall be identified with an outline and a tract identifier that corresponds to the tract identifier listed on the Form P-12.

(2) The operator shall provide information on the Certificate of Pooling Authority, Form P-12, accurately and according to the instructions on the form.

(A) The operator shall separately list each tract committed to the pooled unit by authority granted to the operator.

(B) For each tract listed on Form P-12, the operator shall state the number of acres contained within the tract. The operator shall indicate by checking the appropriate box on Form P-12 if, within an individual tract, there exists a non-pooled and/or unleased interest.

(C) The operator shall state on Form P-12 the total number of acres in the pooled unit. The total number of acres in the pooled unit shall equal the sum of all acres in each individual tract listed.

(D) If a pooled unit contains more tracts than can be listed on a single Form P-12, the operator shall file as many additional Forms P-12 as necessary to list each pooled tract individually. The additional Forms P-12 shall be numbered in sequence.

(E) The operator shall provide the requested identification and contact information on the Form P-12.

(F) The operator shall certify the information on the Form P-12 by signing and dating the form.

(3) Failure to timely file the required information on the certified plat or the Form P-12 may result in the dismissal of the W-1 application. "Timely" means within three months of the Commission notifying the operator of the need for additional information on the certified plat and/or the Form P-12.

(4) The operator shall file the original certified plat and Form P-12 at the Commission's Austin office. The operator shall file a copy of the certified plat and Form P-12 with the appropriate Commission district office or offices. If the operator files electronically through the Commission's Electronic Compliance and Approval Process (ECAP) system, the operator is not required to file additional paper copies in the appropriate Commission district office, because all Commission offices will have electronic access to the Form P-12 and certified plat.

(5) The operator shall file the Form P-12 and certified plat:

(A) with the drilling permit application when two or more tracts are joined to form a pooled unit for Commission purposes to obtain a drilling permit;

(B) with completion paperwork when the pooled unit's acreage is being used or assigned for allowable purposes;

(C) to designate a pooled unit formed after completion paperwork has been filed when the pooled unit's acreage is being used or assigned for allowable purposes; or

(D) to designate a change in a pooled unit previously recognized by the Commission. The operator shall file any changes to a pooled unit in accordance with the requirements of §3.38(d)(3) of this title, relating to Well Densities.

(b) If a tract to be pooled has an outstanding interest for which pooling authority does not exist, the tract may be assigned to a unit where authority exists in the remaining undivided interest, provided, that total gross acreage in the tract is included for allocation purposes, and the certificate filed with the commission shows that a certain undivided interest is outstanding in the tract. The commission will not allow an operator to assign only his undivided interest out of a basic tract, where a nonpooled interest exists.

(c) The nonpooled undivided interest holder retains his development rights in his basic tract, and should such rights be exercised, authority to develop the basic tract be approved by the commission, and a well completed as a producer thereon, then the entire interest in the basic tract must be allocated to said well, and any interest insofar as it is pooled with another tract must be assigned to the well on the basic tract for allocation purposes. Splitting of undivided interest in a basic tract between two or more wells on two or more tracts is not acceptable.

(d) Acreage assigned to a well for drilling and development, or for allocation of allowable, shall not be assigned to any other well or wells projected to or completed in the same reservoir; such duplicate assignment of acreage is not acceptable, provided, however, that this limitation shall not prevent the reformation of development or proration units so long as no duplicate assignment of acreage occurs, and further, that such reformation does not violate other conservation regulations.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.39	**Proration and Drilling Units: Contiguity of Acreage and Exception Thereto**

(a) Proration and drilling units established for individual wells drilled or to be drilled shall consist of acreage which is contiguous.

(b) An exception to the contiguous acreage provision may be granted at the operator's request if acreage that is to be included in the proration or drilling unit is separated by a long, narrow right-of-way tract.

Source Note: The provisions of this §3.39 adopted to be effective January 1, 1976.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.38	**Well Densities**

(a) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Commission designee--Director of the Oil and Gas Division or any Commission employee designated in writing by the director or the Commission.

(2) Drilling unit--The acreage assigned to a well for drilling purposes.

(3) Proration unit--The acreage assigned to a well for the purpose of assigning allowables and allocating allowable production to the well.

(4) Substandard acreage--Less acreage than the smallest amount established for standard or optional drilling units.

(5) Surplus acreage--Substandard acreage within a lease, pooled unit, or unitized tract that remains unassigned after the assignment of acreage to each applied for, permitted, or completed well in a field, in an amount equaling or exceeding the amount established for standard or optional drilling units. Surplus acreage is distinguished from the term "tolerance acreage,"in that tolerance acreage is defined in context with proration regulation, while surplus acreage is defined by this rule only in context with well density regulation.

(6) Tolerance acreage--Acreage within a lease, pooled unit, or unitized tract that may be assigned to a well for proration purposes pursuant to special field rules in addition to the amount established for a prescribed or optional proration unit.

(b) Density requirements.

(1) General prohibition. No well shall be drilled on substandard acreage except as hereinafter provided.

(2) Standard units.

(A) The standard drilling unit for all oil, gas, and geothermal resource fields wherein only spacing rules, either special, country regular, or statewide, are applicable is hereby prescribed to be the following.

Attached Graphic

(B) The spacing rules listed in subparagraph (A) of this paragraph are not exclusive. If any spacing rule not listed in subparagraph (A) of this subsection is brought to the attention of the commission, it will be given an appropriate acreage assignment.

(c) Development to final density. An application to drill a well for oil, gas, or geothermal resource on a drilling unit composed of surplus acreage, commonly referred to as the "tolerance well," may be granted as regular when the operator seeking such permit certifies to the commission in a prescribed form the necessary data to show that such permit is needed to develop a lease, pooled unit, or unitized tract to final density, and only in the following circumstances:

(1) when the amount of surplus acreage equals or exceeds the maximum amount provided for tolerance acreage by special or county regular rules for the field, provided that this paragraph does not apply for a lease, pooled unit, or unitized tract that is completely developed with optional units and the special or county regular rules for the field do not have a tolerance provisions expressly made applicable to optional proration units;

(2) if the special or county regular rules for the field do not have a tolerance provision expressly made applicable to optional proration units, when the amount of surplus acreage equals or exceeds one-half of the smallest amount established for an optional drilling unit; or

(3) if the applicable rules for the field do not have a tolerance provision for the standard drilling or proration unit, when the amount of surplus acreage equals or exceeds one-half the amount prescribed for the standard unit.

(d) Applications involving the voluntary subdivision rule.

(1) Density exception not required. An exception to the minimum density provision is not required for the first well in a field on a lease, pooled unit, or unitized tract composed of substandard acreage, when the leases, or the drillsite tract of a pooled unit or unitized tract:

(A) took its present size and shape prior to the date of attachment of the voluntary subdivision rule (§3.37(g) of this title (relating to Statewide Spacing Rule)); or

(B) took its present size and shape after the date of attachment of the voluntary subdivision rule (§3.37(g) of this title (relating to Statewide Spacing Rule)) and was not composed of substandard acreage in the field according to the density rules in effect at the time it took its present size and shape.

(2) Density exception required. An exception to the density provision is required, and may be granted only to prevent waste, for a well on a lease, pooled unit, or unitized tract that is composed of substandard acreage and that:

(A) took its present size and shape after the date of attachment of the voluntary subdivision rule (§3.37(g) of this title (relating to the Statewide Spacing Rule)); and

(B) was composed of substandard acreage in the field according to the density rules in effect at the time it took its present size and shape.

(3) Unit dissolution.

(A) If two or more separate tracts are joined to form a unit for oil or gas development, the unit is accepted by the Commission, and the unit has produced hydrocarbons in the preceding twenty (20) years, the unit may not thereafter be dissolved into the separate tracts with the rules of the commission applicable to each separate tract if the dissolution results in any tract composed of substandard acreage for the field from which the unit produced, unless the Commission approves such dissolution.

(B) The Commission shall grant approval only after application, notice, and an opportunity for hearing. The applicant seeking the unit dissolution shall provide a list of the names and addresses of all current lessees and unleased mineral interest owners of each tract within the joined or unitized tract at the time the application is filed. The Commission shall give notice of the application to all current lessees and unleased mineral interest owners of each tract within the joined or unitized tract. Additionally, if one or more wells on the unitized tract has produced from the field within the 12-month period prior to the application, the applicant shall include on the list all affected persons described in subsection (h)(1)(A) of this section, and the Commission shall give notice of the application to these affected persons.

(C) A Commission designee may grant administrative approval if the Commission designee determines that granting the application will not result in the circumvention of the density restrictions of this section or other Commission rules, and if either:

(i) written waivers are filed by all affected persons; or

(ii) no protest is filed within the time set forth in the notice of application.

(e) Application involving unitized areas with entity for density orders. An exception to the minimum density provision is not required for a well in a unitized area for which the commission has granted an entity for density order, if the sum of all applied for, permitted, or completed producing wells in the field within the unitized area, multiplied by the applicable density provision, does not exceed the total number of acres in the unitized area. The operator must indicate the docket number of the entity for density order on the application form.

(f) Exceptions to density provisions authorized. The Commission, or Commission designee, in order to prevent waste or, except as provided in subsection (d)(2) of this section, to prevent the confiscation of property, may grant exceptions to the density provisions set forth in this section. Such an exception may be granted only after notice and an opportunity for hearing.

(g) Filing requirements.

(1) Application. An application for permit to drill shall include the fees required in §3.78 of this title (relating to Fees and Financial Security Requirements) and shall be certified by a person acquainted with the facts, stating that all information in the application is true and complete to the best of that person's knowledge.

(2) Plat. When filing an application for an exception to the density requirements of this section, in addition to the plat requirements in §3.5 of this title (relating to Application to Drill, Deepen, Reenter, or Plug Back) (Statewide Rule 5), the applicant shall attach to each copy of the application a plat that:

(A) depicts the lease, pooled unit, or unitized tract, showing thereon the acreage assigned to the drilling unit for the proposed well and the acreage assigned to all current applied for, permitted, or completed oil, gas, or oil and gas wells in the same field or reservoir which are located within the lease, pooled unit, or unitized tract;

(B) on large leases, pooled units, or unitized tracts, if the established density is not exceeded as shown on the face of the application, outlines the acreage assigned to the well for which the permit is sought and the immediately adjacent wells on the lease, pooled unit, or unitized tract;

(C) on leases, pooled units, or unitized tracts from which production is secured from more than one field, outlines the acreage assigned to the wells in each field that is the subject of the current application;

(D) corresponds to the listing required under subsection (g)(1)(A) of this section.

(E) is certified by a person acquainted with the facts pertinent to the application that the plat is accurately drawn to scale and correctly reflects all pertinent and required data.

(3) Substandard acreage. An application for a permit to drill on a lease, pooled unit, or unitized tract

composed of substandard acreage must include a certification in a prescribed form indicating the date the lease, or the drillsite tract of a pooled unit or unitized tract, took its present size and shape.

(4) Surplus acreage. An application for permit to drill on surplus acreage pursuant to subsection (c) of this section must include a certification in a prescribed form indicating the date the lease, pooled unit, or unitized tract took its present size and shape.

(5) Certifications. Certifications required under paragraphs (3) and (4) of this subsection shall be filed on Form W-1A, Substandard Acreage Certification.

(A) The operator shall file the Form W-1A with the drilling permit application and shall indicate the purpose of filing. The operator shall accurately complete all information required on the form in accordance with instructions on the form.

(B) The operator shall list the field or fields for which the substandard acreage certification applies in the designated area on the form. If there are more than three fields for which the certification applies, the operator shall attach additional Forms W-1A and shall number the additional pages in sequence.

(C) The operator shall file the original Form W-1A with the Commission's Austin office and a copy with the appropriate district office, unless the operator files electronically through the Commission's Electronic Compliance and Approval Process (ECAP) system.

(D) The operator or the operator's agent shall certify the information provided on the Form W-1A is true, complete, and correct by signing and dating the form, and listing the requested identification and contact information.

(E) Failure to timely file the required information on the appropriate form may result in the dismissal of the application.

(h) Procedure for obtaining exceptions to the density provisions.

(1) Filing requirements. If a permit to drill requires an exception to the applicable density provision, the operator must file, in addition to the items required by subsection (g) of this section:

(A) a list of the names and addresses of all affected persons. For the purpose of giving notice of application, the Commission presumes that affected persons include the operators and unleased mineral interest owners of all adjacent offset tracts, and the operators and unleased mineral interest owners of all tracts nearer to the proposed well than the prescribed minimum lease-line spacing distance. The Commission designee may determine that such a person is not affected only upon written request and a showing by the applicant that:

(i) competent, convincing geological or engineering data indicate that drainage of hydrocarbons from the particular tracts subject to the request will not occur due to production from the proposed well; and

(ii) notice to the particular operators and unleased mineral interest owners would be unduly burdensome or expensive;

(B) engineering and/or geological data, including a written explanation of each exhibit, showing that the drilling of a well on substandard acreage is necessary to prevent waste or to prevent the confiscation of property;

(C) additional data requested by the Commission designee.

(2) Notice of application. Upon receipt of a complete application, the Commission will give notice of the application by mail to all affected persons for whom signed waivers have not been submitted.

(3) Approval without hearing. If the Commission designee determines, based on the data submitted, that a permit requiring an exception to the applicable density provision is justified according to subsection (f) of this section, then the Commission designee may issue the exception permit administratively if:

(A) signed waivers from all affected persons were submitted with the application; or

(B) notice of application was given in accordance with paragraph (2) of this subsection and no protest was filed within 21 days of the notice; or

(C) no person appeared to protest the application at a hearing scheduled pursuant to paragraph (4)(A) of this subsection.

(4) Hearing on the application.

(A) If a written protest is filed within 21 days after the notice of application is given in accordance with paragraph (2) of this subsection, the application will be set for hearing.

(B) If the application is not protested and the Commission designee determines that a permit requiring an exception to the applicable density provision is not justified according to subsection (f) of this section, the operator may request a hearing to consider the application.

(i) Duration. A permit is issued as an exception to the applicable density provision shall expire two years from the effective date of the permit; unless drilling operations are commenced in good faith within the two year period.

Source Note: The provisions of this §3.38 adopted to be effective November 1, 1989, 14 TexReg 5255; amended to be effective April 21, 1997, 22 TexReg 3404; amended to be effective July 10, 2000, 25 TexReg 6487; amended to be effective June 11, 2001, 26 TexReg 4088; amended to be effective February 13, 2002, 27 TexReg 906; amended to be effective September 1, 2004, 29 TexReg 8271

Next Rule>>

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.37	**Statewide Spacing Rule**

(a) Distance requirements.

(1) No well for oil, gas, or geothermal resource shall hereafter be drilled nearer than 1,200 feet to any well completed in or drilling to the same horizon on the same tract or farm, and no well shall be drilled nearer than 467 feet to any property line, lease line, or subdivision line; provided the commission, in order to prevent waste or to prevent the confiscation of property, may grant exceptions to permit drilling within shorter distances than prescribed in this paragraph when the commission shall determine that such exceptions are necessary either to prevent waste or to prevent the confiscation of property.

(2) When an exception to this section is desired, application shall be made by filing the proper fee as provided in §3.78 of this title (relating to Fees and Financial Security Requirements) and the appropriate form according to the instructions on the form, accompanied by a plat as described in subsection (c) of this section. A person acquainted with the facts pertinent to the application shall certify that all facts stated in it are true and within the knowledge of that person.

(A) When an exception to only the minimum lease-line spacing requirement is desired, the applicant shall file a list of the mailing addresses of all affected persons, who, for tracts closer to the well than the greater of one-half of the prescribed minimum between-well spacing distance or the minimum lease-line spacing distance, include:

(i) the designated operator;

(ii) all lessees of record for tracts that have no designated operator; and

(iii) all owners of record of unleased mineral interests.

(B) When an exception to the minimum between-well spacing requirement of this section is desired, the applicant is required to file the mailing addresses of those persons identified in subparagraph (A)(i)-(iii) of this paragraph for each adjacent tract and each tract nearer to the well than the greater of one-half the prescribed minimum between-well spacing distance or the minimum lease-line spacing.

(3) An exception may be granted pursuant to subsection (h)(2) of this section, or after a public hearing held after at least 10 days notice to all persons described in paragraph (2) of this subsection. At any such hearing, the burden shall be on the applicant to establish that an exception to this section is necessary either to prevent waste or to prevent the confiscation of property. For purposes of giving notice of an application for an exception, the commission will presume that every person described in paragraph (2) of this subsection will be affected by the application, unless the Oil and Gas Division director or the director's delegate determines they are unaffected. Such determination will be made only upon written request and a showing by the applicant that:

(A) competent, conclusive geological or engineering data indicate that no drainage of hydrocarbons from the particular tract(s) subject to the request will occur due to production from the applicant's proposed well; and

(B) notice to the particular operator(s), lessee(s) of record, or owner(s) of record of unleased mineral interest would be unduly burdensome or expensive.

(b) The distances mentioned in subsection (a) of this section are minimum distances to provide standard development on a pattern of one well to each 40 acres in areas where proration units have not been established.

(c) In filing an application for an exception to the distance requirements of this section, in addition to the plat requirements in §3.5 of this title (relating to Application to Drill, Deepen, Reenter, or Plug Back) (Statewide Rule 5), the applicant shall attach to each copy of the form a plat that:

(1) shows to scale the property on which the exception is sought; all other applied for, permitted, and completed oil, gas, or oil and gas wells in the same field and reservoir on said property; and all adjoining surrounding properties and completed wells in the same field and reservoir within the prescribed minimum between-well spacing distance of the applicant's well;

(2) shows the entire lease, pooled unit, or unitized tract indicating the names and offsetting properties of all affected offset operators;

(3) corresponds to the listing required under subsection (a)(2) of this section;

(4) is certified by a person acquainted with the facts pertinent to the application that the plat is accurately drawn to scale and correctly reflects all pertinent and required data.

(d) In the interest of protecting life and for the purpose of preventing waste and preventing the confiscation of property, the commission reserves the right in particular oil, gas, and geothermal resource fields to enter special orders increasing or decreasing the minimum distances provided by this section.

(e) No well drilled in violation of this section without special permit obtained, issued, or granted in the manner prescribed in said section, and no well drilled under such special permit or on the commission's own order which does not conform in all respects to the terms of such permit shall be permitted to produce either oil, gas, or geothermal resources and any such well so drilled in violation of said section or on the commission's own order shall be plugged.

(f) No operator shall commence the drilling of a well, either on a regular location or on a Rule 37 exception location, until first having been notified by the commission that the regular location has been approved, or that the Rule 37 exception location has been approved. Failure of an operator to comply with this subsection will cause such well to be closed in and the holding up of the allowable of such well.

(g) Subdivision of property.

(1) In applying Rule 37 (Statewide Spacing Rule) of statewide application and in applying every special rule with relation to spacing in every field in this state, no subdivision of property made subsequent to the adoption of the original spacing rule will be considered in determining whether or not any property is being confiscated within the terms of such spacing rule, and no subdivision of property will be regarded in applying such spacing rule or in determining the matter of confiscation if such subdivision took place subsequent to the promulgation and adoption of the original spacing rule.

(2) Any subdivision of property creating a tract of such size and shape that it is necessary to obtain an exception to the spacing rule before a well can be drilled thereon is a voluntary subdivision and not entitled to a permit to prevent confiscation of property if it were either:

(A) segregated from a larger tract in contemplation of oil, gas, or geothermal resource development; or

(B) segregated by fee title conveyance from a larger tract after the spacing rule became effective and the voluntary subdivision rule attached.

(3) The date of attachment of the voluntary subdivision rule is the date of discovery of oil, gas, or geothermal resource production in a certain continuous reservoir, regardless of the subsequent lateral extensions of such reservoir, provided that such rule does not attach in the case of a segregation of a small

tract by fee title conveyance which is not located in an oil, gas, or geothermal resource field having a discovery date prior to the date of such segregation.

(4) The date of attachment of the voluntary subdivision rule for multiple reservoir fields located in the same structural feature and separated vertically but not laterally (i.e., the multiple reservoirs overlap geographically at least in part), shall be the same date as that assigned to the earliest discovery well for such multiple reservoir structure.

(5) If a newly discovered reservoir is located outside the then productive limits of any previously discovered reservoirs and is classified by the commission as a newly discovered field, then the date of discovery of such newly found reservoir remains the date of attachment for the voluntary subdivision rule, even though subsequent development may result in the extension of such newly discovered reservoir until it overlies or underlies older reservoirs with prior discovery dates.

(6) The date of attachment of the voluntary subdivision rule for a reservoir that has been developed through expansion of separately recognized fields into a recognized single reservoir and is merged by commission order is the earliest discovery date of production from such merged reservoir, and that date will be used subsequent to the date of merger of the fields into a single field.

(7) The date of attachment of the voluntary subdivision rule for a reservoir under any special circumstance which the commission deems sufficient to provide for an exception may be established other than as prescribed in this section, so that innocent parties may have their rights protected.

(h) Exceptions to Rule 37.

(1) An order granting exception to Rule 37 wherein protest is had shall carry as its last paragraph the following language: It is further ordered by the commission that this order shall not be final until 20 days after it is actually mailed to the parties by the commission; provided that if a motion for rehearing of the application is filed by any party at interest within such 20-day period, this order shall not become final until such motion is overruled, or if such motion is granted, this order shall be subject to further action by the commission. Permits issued pursuant to paragraph (2) of this subsection shall be issued without the 20-day waiting period.

(2) The director of the Oil and Gas Division or a delegate of the director may issue an exception permit for drilling, deepening, or additional completion, recompletion, or reentry in an existing well bore if:

(A) a notice of at least 10 days has been given, and no protest has been made to the application; or

(B) written waivers of objection are received from all persons to whom notice would be given pursuant to subsection (a)(2) of this section.

(3) Applications filed for drilling, deepening, or additional completion, recompletion, or reentry will be processed and permit issued in accordance with this regulation, subject to the commission's discretion to set any application for hearing. If the director or a delegate of the director declines to grant an application, the operator may request a hearing.

(i) Rule 37 permits.

(1) Unless otherwise specified in a permit or in a final order granting an exception to this section, permits issued by the commission for completions requiring an exception to this section shall expire two years from the effective date of the permit unless drilling operations are commenced in good faith within the two-year permit period. The permit period will not be extended.

(2) So long as a Rule 37 exception is in litigation, the two-year permit period will not commence. On final adjudication and decree from the last court of appeal the two-year permit period will commence, beginning on the date of final decree.

(j) Once an application for a spacing exception has been denied, no new application shall be entertained except on changed conditions. Changed conditions in the commission's administration of its Spacing Rule 37 and amendments thereto applicable to the various special fields and reservoirs of Texas and in passing upon applications for permits under said rule and amendments shall include, among other things, the following.

(1) Any material changes in the physical conditions of the producing reservoir under the tract under consideration or under the area surrounding said tract which would materially affect the recovery of oil, gas, or geothermal resource from the given tract.

(2) Any material changes in the distribution or allocation of allowable production in the area surrounding the tract under consideration which would materially affect or tend to affect the recovery of oil, gas, or geothermal resource from the given tract.

(3) Any additional permits granted by the commission for wells drilled in the area surrounding or on offset tracts to the tract under consideration which would materially affect or tend to affect the recovery of oil, gas, or geothermal resource from the given tract.

(4) Any additional facts or evidence thereof materially affecting or tending to affect the recovery of oil, gas, or geothermal resource from the applicant's tract, or the property rights of applicant, which were not known of and considered by the commission at any previous hearing or application thereon.

(k) Exceptions to Statewide Rule 37 apply to the total depth for which the permit is granted or if special field rules are applicable, an exception to the spacing rule shall be granted only for the reservoir or reservoirs or applicable depth to which the well is projected. Subsequent recompletion of the well to reservoirs other than that covered by the permit issued would be granted only after the filing and processing of a new application.

(l) Salt dome oil or gas fields.

(1) The provisions of this section shall not apply to certain approved salt dome oil or gas fields. An application for classification as a salt dome oil or gas field shall include the following:

(A) geological evidence proving that an oil or gas field is a piercement-type salt dome, that faulting has caused the producing formation to be at a 45 angle or greater, and that each well is likely to be completed in a separate reservoir;

(B) establishment, by plat or otherwise, of the probable productive limits of the salt dome area;

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.36	**Oil, Gas, or Geothermal Resource Operation in Hydrogen Sulfide Areas**

(a) Applicability. Each operator who conducts operations as described in paragraph (1) of this subsection shall be subject to this section and shall provide safeguards to protect the general public from the harmful effects of hydrogen sulfide. This section applies to both intentional and accidental releases of hydrogen sulfide.

(1) Operations including drilling, working over, producing, injecting, gathering, processing, transporting, and storage of hydrocarbon fluids that are part of, or directly related to, field production, transportation, and handling of hydrocarbon fluids that contain gas in the system which has hydrogen sulfide as a constituent of the gas, to the extent as specified in subsection (c) of this section, general provisions.

(2) This section shall not apply to:

(A) operations involving processing oil, gas, or hydrocarbon fluids which are either an industrial modification or products from industrial modification, such as refining, petrochemical plants, or chemical plants;

(B) operations involving gathering, storing, and transporting stabilized liquid hydrocarbons;

(C) operations where the concentration of hydrogen sulfide in the system is less than 100 ppm.

(b) Definitions.

(1) Industrial modification--This term is used to identify those operations related to refining, petrochemical plants, and chemical plants. The term does not include field processing such as that performed by gasoline plants and their associated gathering systems.

(2) Stabilized liquid hydrocarbon--The product of a production operation in which the entrained gaseous hydrocarbons have been removed to the degree that said liquid may be stored at atmospheric conditions.

(3) Radius of exposure--That radius constructed with the point of escape as its starting point and its length calculated as provided for in subsection (c)(2) of this section.

(4) Area of exposure--The area within a circle constructed with the point of escape as its center and the radius of exposure as its radius.

(5) Public area--A dwelling, place of business, church, school, hospital, school bus stop, government building, a public road, all or any portion of a park, city, town, village, or other similar area that can expect to be populated.

(6) Public road--Any federal, state, county, or municipal street or road owned or maintained for public access or use.

(7) Sulfide stress cracking--The cracking phenomenon which is the result of corrosive action of hydrogen

sulfide on susceptible metals under stress.

(8) Facility modification--Any change in the operation such as an increase in throughput, in excess of the designed capacity, or any change that would increase the radius of exposure.

(9) Public infringement--This shall mean that a public area and/or a public road, or both, has been established within an area of exposure to the degree that such infringement would change the applicable provisions of this rule to those operations responsible for creating the area of exposure.

(10) Potentially hazardous volume of hydrogen sulfide--A volume of hydrogen sulfide gas of such concentration that:

(A) the 100 ppm radius of exposure is in excess of 50 feet and includes any part of a "public area" except a public road; or

(B) the 500 ppm radius of exposure is greater than 50 feet and includes any part of a public road; or

(C) the 100 ppm radius of exposure is greater than 3,000 feet.

(11) Contingency plan--A written document that shall provide an organized plan of action for alerting and protecting the public within an area of exposure prior to an intentional release, or following the accidental release of a potentially hazardous volume of hydrogen sulfide.

(12) Reaction-type contingency plan--A preplanned, written procedure for alerting and protecting the public, within an area of exposure, where it is impossible or impractical to brief in advance all of the public that might possibly be within the area of exposure at the moment of an accidental release of a potentially hazardous volume of hydrogen sulfide.

(13) Definition of referenced organizations and publications.

(A) ANSI--American National Standard Institute, 1430 Broadway, New York, New York 10018, Table I, Standard 253.1-1967.

(B) API--American Petroleum Institute, 300 Corrigan Tower Building, Dallas, Texas 75201, Publication API RP-49, Publication API RP-14E, Sections 1.7(c), 2.1(c) 4.7.

(C) ASTM--American Society for Testing and Materials, 1916 Race Street, Philadelphia, Pennsylvania 19103, Standard D-2385-66.

(D) GPA--Gas Processors Association, 1812 First Place, Tulsa, Oklahoma 74120, Plant Operation Test Manual C-1, GPA Publication 2265-68.

(E) NACE--National Association of Corrosion Engineers, P.O. Box 1499, Houston, Texas 77001, Standard MR-01-75.

(F) DOT--Department of Transportation, Office of Pipeline Safety, 400 Seventh Street, S.W., Washington, D.C. 20590, Title 49, Code of Federal Regulations, Parts 192 and 195.

(G) OSHA--Occupational Safety and Health Administration, United States Department of Labor, 200 Constitution Avenue, NW, Washington D.C. 20270, Title 29, Code of Federal Regulations, Part 1910.145(c)(4)(i).

(H) RRC--Railroad Commission of Texas, Gas Utilities Division, P.O. Drawer 12967, Capitol Station, Austin, Texas 78711, Gas Utilities Dockets 446 and 183.

(c) General provisions.

(1) Each operator shall determine the hydrogen sulfide concentration in the gaseous mixture in the operation or system.

(A) Tests shall be made in accordance with standards as set by ASTM Standard D-2385-66, or GPA Plant Operation Test Manual C-1, GPA Publication 2265-68, or other methods approved by the commission.

(B) Test of vapor accumulation in storage tanks may be made with industry accepted colormetric tubes.

(2) For all operations subject to this section, the radius of exposure shall be determined, except in the cases of storage tanks, by the following Pasquill-Gifford equations, or by other methods that have been approved by the commission.

(A) For determining the location of the 100 ppm radius of exposure: x = [(1.589) (mole fraction H_2 S)(Q)] to the power of (.6258).

(B) For determining the location of the 500 ppm radius of exposure: x = [(0.4546) (mole fraction H_2 S)(Q)] to the power of (.6258). Where x = radius of exposure in feet; Q = maximum volume determined to be available for escape in cubic feet per day; H_2S = mole fraction of hydrogen sulfide in the gaseous mixture available for escape.

(3) The volume used as the escape rate in determining the radius of exposure shall be that specified in subparagraph (A) - (E) of this paragraph, as applicable.

(A) The maximum daily volume rate of gas containing hydrogen sulfide handled by that system element for which the radius of exposure is calculated.

(B) For existing gas wells, the current adjusted open-flow rate, or the operator's estimate of the well's capacity to flow against zero back-pressure at the wellhead shall be used.

(C) For new wells drilled in developed areas, the escape rate shall be determined by using the current adjusted open-flow rate of offset wells, or the field average current adjusted open-flow rate, whichever is larger.

(D) The escape rate used in determining the radius of exposure shall be corrected to standard conditions of 14.65 pounds per square inch (psia) and 60 degrees Fahrenheit.

(E) For intentional releases from pipelines and pressurized vessels, the operator's estimate of the volume and release rate based on the gas contained in the system elements to be de-pressured.

(4) For the drilling of a well in an area where insufficient data exists to calculate a radius of exposure, but where hydrogen sulfide may be expected, then a 100 ppm radius of exposure equal to 3,000 feet shall be assumed. A lesser-assumed radius may be considered upon written request setting out the justification for same.

(5) Storage tank provision: storage tanks which are utilized as a part of a production operation, and which are operated at or near atmospheric pressure, and where the vapor accumulation has a hydrogen sulfide concentration in excess of 500 ppm, shall be subject to the following.

(A) No determination of a radius of exposure shall be made for storage tanks as herein described.

(B) A warning sign shall be posted on or within 50 feet of the facility to alert the general public of the potential danger.

(C) Fencing as a security measure is required when storage tanks are located inside the limits of a townsite or city, or where conditions cause the storage tanks to be exposed to the public.

(D) The warning and marker provision, paragraph (6)(A)(i), (ii), and (iv) of this subsection.

(E) The certificate of compliance provision, subsection (d)(1) of this section.

(6) All operators whose operations are subject to this section, and where the 100 ppm radius of exposure is in excess of 50 feet, shall be subject to the following.

(A) Warning and marker provision.

(i) For above-ground and fixed surface facilities, the operator shall post, where permitted by law, clearly visible warning signs on access roads or public streets, or roads which provide direct access to facilities located within the area of exposure.

(ii) In populated areas such as cases of townsites and cities where the use of signs is not considered to be acceptable, then an alternative warning plan may be approved upon written request to the commission.

(iii) For buried lines subject to this section, the operator shall comply with the following.

(I) A marker sign shall be installed at public road crossings.

(II) Marker signs shall be installed along the line, when it is located within a public area or along a public road, at intervals frequent enough in the judgment of the operator so as to provide warning to avoid the accidental rupturing of line by excavation.

(III) The marker sign shall contain sufficient information to establish the ownership and existence of the line and shall indicate by the use of the words "Poison Gas" that a potential danger exists. Markers installed in compliance with the regulations of the federal Department of Transportation shall satisfy the requirements of this provision. Marker signs installed prior to the effective date of this section shall be acceptable provided they indicate the existence of a potential hazard.

(iv) In satisfying the sign requirement of clause (i) of this subparagraph, the following will be acceptable.

(I) Sign of sufficient size to be readable at a reasonable distance from the facility.

(II) New signs constructed to satisfy this section shall use the language of "Caution" and "Poison Gas" with a black and yellow color contrast. Colors shall satisfy Table I of American National Standard Institute Standard 253.1-1967. Signs installed to satisfy this section are to be compatible with the regulations of the federal Occupational Safety and Health Administration.

(III) Existing signs installed prior to the effective date of this section will be acceptable if they indicate the existence of a potential hazard.

(B) Security provision.

(i) Unattended fixed surface facilities shall be protected from public access when located within 1/4 mile of a dwelling, place of business, hospital, school, church, government building, school bus stop, public park, town, city, village, or similarly populated area. This protection shall be provided by fencing and locking, or removal of pressure gauges and plugging of valve opening, or other similar means. For the purpose of this provision, surface pipeline shall not be considered as a fixed surface facility.

(ii) For well sites, fencing as a security measure is required when a well is located inside the limits of a townsite or city, or where conditions cause the well to be exposed to the public.

(iii) The fencing provision will be considered satisfied where the fencing structure is a deterrent to public access.

(C) Materials and equipment provision.

(i) For new construction or modification of facilities (including materials and equipment to be used in drilling and workover operations) completed or contemplated subsequent to the effective date of this section, the metal components shall be those metals which have been selected and manufactured so as to be resistant to hydrogen sulfide stress cracking under the operating conditions for which their use is intended, provided that they satisfy the requirements described in the latest editions of NACE Standard MR-01-75 and API RP-14E, sections 1.7(c), 2.1(c), 4.7. The handling and installation of materials and equipment used in hydrogen sulfide service are to be performed in such a manner so as not to induce susceptibility to sulfide stress cracking. Other materials which are nonsusceptible to sulfide stress cracking, such as fiberglass and plastics, may be used in hydrogen sulfide service provided such materials have been manufactured and inspected in a manner which will satisfy the latest published, applicable industry standard, specifications, or recommended practices.

TITLE 16 ECONOMIC REGULATION

PART 1 RAILROAD COMMISSION OF TEXAS

CHAPTER 3 OIL AND GAS DIVISION

RULE §3.35 **Procedures for Identification and Control of Wellbores in Which Certain Logging Tools Have Been Abandoned**

(a) Abandonment of radioactive source.

(1) Immediate notice of the loss of a radioactive source shall be filed by the operator with the commission designating the location, by county, survey name and abstract number, lease name and well number, distances from survey boundaries and Lambert Coordinates.

(2) Procedures for recovery of the lost radioactive source will be furnished to the commission and such radioactive source shall not be declared abandoned until all reasonable effort has been expended to retrieve the tool.

(3) The operator shall erect, under supervision of the commission, a standardized permanent surface marker as a visual warning to any person who may reenter the hole for any reason, showing that it contains a radioactive source. This marker shall contain the following information: well name, commission number, surface location, name of the operator, name of the lease, the source or material abandoned in the well, the total depth of the well, the depth at which the source is abandoned, the plug back depth, the date of the abandonment of the source, the activity of the source, and a warning not to drill below the plug back depth.

(b) Abandonment procedures.

(1) Wells in which radioactive sources are abandoned shall be mechanically equipped so as to prevent either accidental or intentional mechanical disintegration of the radioactive source.

(A) Sources abandoned in the bottom of the well shall be covered with a substantial standard color dyed (red iron oxide) cement plug on top of which a whipstock or other approved deflection device shall be set. The dye is to alert the reentry operator prior to encountering the source.

(B) Upon abandoning the well in which a logging source has been cemented in place behind a casing string above total depth, a standard color dyed cement plug shall be placed opposite the abandoned source and a whipstock or other approved deflection device placed on top of the plug.

(C) In the event the operator finds that after expending a reasonable effort, because of hole conditions, it is not possible to abandon the source as prescribed in subparagraphs (A) and (B) of this paragraph, he shall seek commission approval to an alternate abandonment procedure.

(D) When a logging source must be abandoned in a producing zone, a standard color dyed cement plug shall be set and a whipstock or other approved deflection device placed above to direct the sidetrack at least 15 feet away from the source.

(2) Upon permanent abandonment of any well in which a radioactive source is left in the hole, and after removal of the wellhead, a permanent plaque shall be attached to the top of the casing left in the hole in such a manner that reentry cannot be accomplished without disturbing the plaque. This plaque shall serve as a visual warning to any person reentering the hole that a radioactive source has been abandoned in place in the

well. The plaque shall contain the trefoil radiation symbol with a radioactive warning and shall be constructed of a long-lasting material such as monel, stainless steel, or brass, in accordance with specifications established by the commission. The plugging report filed with the commission shall identify the well as an abandoned radioactive source well, and shall show compliance with the procedures required by this section.

(3) The commission will maintain a current listing of all abandoned radioactive source wells, and each district office will keep such a list for radioactive source wells in that district.

Source Note: The provisions of this §3.35 adopted to be effective January 1, 1976.

<<Prev Rule Next Rule>>

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.34	**Gas To Be Produced and Purchased Ratably**

(a) Definitions. The following words and terms, when used in this section and in §3.31 of this title (relating to Gas Reservoirs and Gas Well Allowable) (Statewide Rule 31) shall have the following meanings, unless the context clearly indicates otherwise.

(1) Affiliate--A person or entity that owns, is owned by, or is under common ownership with another person or entity to the extent of 50% or more or that otherwise controls or is controlled by another person or entity. Affiliates of a common entity are also affiliates of each other. A person or entity that purchases gas solely for purposes other than resale shall not be considered an affiliate, and an interstate pipeline, as defined in the Natural Gas Policy Act of 1978, §2(15) (15 United States Code §3301 et seq.), shall not be considered an affiliate of an intrastate pipeline.

(2) Commission designee--A Railroad Commission employee authorized to act for the commission. Any authority given to a commission designee is also retained by the commission. Any action taken by the commission designee is subject to review by the commission.

(3) Downstream purchaser--One that purchases natural gas for resale and is not a first purchaser.

(4) First purchaser or initial purchaser--The first purchaser of natural gas produced from a well. A first purchaser and any affiliate of the purchaser that transports any natural gas it purchases from a well by use of the same pipeline system used by the first purchaser of which it is an affiliate shall be treated as a single first purchaser for purposes of ratability requirements; provided, however, that an affiliate that is purchasing and accepting deliveries pursuant to a special marketing program that is in compliance with this section, shall be treated as a separate first purchaser; and, provided further that the designation of such affiliate as a separate first purchaser is reviewable by the commission and may be disallowed upon a showing that the designation was for purposes of circumventing this section. Any affiliate may file forms in its own name.

(5) Pipeline system--A network of physically connected pipelines that are operated as a single unit under normal conditions.

(A) A first purchaser's pipeline system is that portion of a physical segment of a pipeline that the first purchaser owns.

(B) If a first purchaser does not own the pipeline it uses to transport its gas, the first purchaser's pipeline system shall include all the wells from which it purchases that are on the pipeline system of the transport pipeline.

(C) A first purchaser may not segregate its purchases from any one field into two or more pipeline systems by transporting on another pipeline gas that it purchases as a first purchaser if the first purchaser is also purchasing as a first purchaser from the same field and transporting on a pipeline that it owns.

(D) A first purchaser may not segregate its purchases from any one field into two or more pipeline systems by executing gas exchange agreements.

(E) Any of a first purchaser's pipeline systems which serve a common customer or common customers in a common geographic location shall be operated in a manner to avoid unjust or unreasonable discrimination in takes as between those systems.

(F) A first purchaser shall not segregate its physically connected pipelines that are capable of being operated as a single unit under normal conditions into two or more pipeline systems or designate a gathering system as a separate system for purposes of circumventing this section.

(6) Prorated gas field--A reservoir or field in which an allocation formula is in effect.

(b) General provisions. This section is promulgated to promote and maintain ratable production of natural gas and to require production in compliance with priority categories established by the commission for the purposes of preventing waste, including production in excess of market demand, protecting correlative rights, preventing discrimination, and conserving the natural resources of this state. An operator shall not produce in excess of its ratable share of the market demand as determined by this section and §3.28 and §3.31 of this title (relating to Potential and Deliverability of Gas Wells To Be Ascertained and Reported, and Gas Reservoirs and Gas Well Allowable) (Statewide Rules 28 and 31). An operator shall produce ratably as set out in subsection (e) of this section and shall produce in compliance with subsection (i) of this section which establishes priority categories of natural gas. Because production is dictated by pipeline capacity and market demand, pipelines are an integral part of production regulation. The requirements imposed on pipelines by this section and §3.28 and §3.31 of this title (relating to Potential and Deliverability of Gas Wells To Be Ascertained and Reported, and Gas Reservoirs and Gas Well Allowable) (Statewide Rules 28 and 31) are enforced to assist in the regulation of production and provide the only method by which such production regulation can be enforced and market demand met as required by statutory law. A first purchaser shall not discriminate between different wells from which it purchases in the same field, nor shall it discriminate unjustly or unreasonably between separate fields. The provisions of this section requiring ratable production and purchasing of gas apply to purchase and production from wells from which a first purchaser is purchasing on its pipeline system.

(c) Designation of pipeline system. A first purchaser shall, on or before a date designated by the commission or a commission designee, designate its pipeline system(s) and shall identify its affiliates that use the same pipeline system, including an affiliate operating a special marketing program that is in compliance with subsection (k) of this section. A pipeline system designation must identify the physical segment of pipeline that constitutes the pipeline system and identify by Railroad Commission of Texas lease and/or identification number and field the wells on that pipeline system from which the first purchaser is purchasing. A change in pipeline system designation is not required to add or delete well connections. The designation of a pipeline system cannot be changed by a first purchaser without prior approval by the commission or a commission designee. Approval of a change in pipeline system designation cannot be given without prior notice of the requested designation given by the first purchaser to affected operators of wells on the system(s) for which a change in designation is sought. A hearing to determine the proper designation of a first purchaser's pipeline system may be called by the commission, or may be requested by a first purchaser or by an operator filing a complaint. The burden of proof in the hearing shall be on the first purchaser.

(d) Operators who use produced gas. Any person who purchases natural gas at the wellhead, at a common point within a field or fields or at the outlet of a processing or treating plant must determine if it is the initial purchaser.

(e) Production guidelines. An operator shall produce without discrimination between its wells in the same field on the same first purchaser's pipeline system and without unjust or unreasonable discrimination between its wells in separate fields on the same first purchaser's pipeline system. An operator shall apportion a first purchaser's delivery requests ratably to its wells in each field on the same first purchaser's pipeline system without discrimination in the same manner as provided in this section and §3.28 and §3.31 of this title (relating to Potential and Deliverability of Gas Wells To Be Ascertained and Reported, and Gas Reservoirs and Gas Well Allowable) (Statewide Rules 28 and 31) and shall not produce in excess of its ratable share of the market demand as its share is determined by those rules. An operator shall produce in compliance with the priority categories of gas production established by the commission in subsection (i) of this section.

(f) Purchases from different fields.

(1) In making purchases and accepting deliveries between fields, a first purchaser of natural gas that purchases and accepts delivery of gas from more than one field on its same pipeline system must accept from each field a consistent percentage of the portion of the aggregate deliverability as determined by the deliverability tests and total gas limits that it is entitled to purchase from all wells from which it purchases on its pipeline system, unless the purchaser can demonstrate a just and reasonable basis for discriminating between fields.

(2) Natural gas purchases from a well by a first purchaser that uses another first purchaser's pipeline system to transport its gas and sells the gas purchased on that pipeline system solely to the first purchaser that owns the transport pipeline must be treated as first purchases of gas by the first purchaser that owns the transport pipeline.

(g) Purchases within a field.

(1) In making purchases and accepting deliveries within fields, a first purchaser of natural gas that purchases and accepts delivery of gas from different gas wells in the same priority category (see subsection (i) of this section) in the same field on its same pipeline system shall purchase and accept from the wells from which it purchases in the field a consistent percentage of the portion that it is entitled to purchase of the maximum allowable that a well is entitled to under the field's allocation formula. If purchases and deliveries from different wells in the same field become nonratable, the first purchaser shall consider commission-assigned underproduction and overproduction to establish an appropriate pattern of purchases or acceptance of deliveries to restore ratability.

(2) Natural gas purchases from a well by a first purchaser that uses another first purchaser's pipeline system to transport its gas and sells the gas purchased on that pipeline system solely to the first purchaser that owns the transport pipeline must be treated as first purchases of gas by the first purchaser that owns the transport pipeline.

(3) Purchases and deliveries of casinghead gas shall be based on the well's gas limit as specified in §3.49 of this title (relating to Gas-Oil Ratio) (Statewide Rule 49) as provided in subsection (h) of this section. Overproduction and underproduction of gas is administered by the provisions of §3.31 of this title (relating to Gas Reservoirs and Gas Well Allowable) (Statewide Rule 31). A first purchaser shall not reduce purchases from a limited well as described in §3.31(g)(5) until all prorated gas wells from which it purchases in the field connected to its same pipeline system are ratably reduced to the assigned allowable of the limited well. Below that point, purchases from all prorated wells and limited wells should be reduced ratably by purchasing and accepting delivery of the same percentage of the portion that it is entitled to purchase of the maximum allowable established for the well by the field's allocation formula. If purchases and deliveries from different wells in the same field become nonratable, the first purchaser shall consider commission-assigned underproduction and overproduction in establishing an appropriate pattern of purchases or acceptances of deliveries to restore ratability. When purchases of gas described in subsection (i)(2) or (5) of this section are to be reduced, they shall be reduced ratably within each priority category.

(h) Casinghead gas reductions. When purchases and deliveries of casinghead gas described in subsection (i)(1) or (3) of this section are to be reduced, each well's share of the reduction shall be calculated by multiplying the total reduction by the fractional share that each well's gas limit bears to the arithmetic sum of the aggregate gas limits of all wells in the field from which the first purchaser has been purchasing on its same pipeline system. In calculating its reduction of a well, a first purchaser shall use that portion of the gas limits that it is entitled to purchase. A well operating under net gas/oil ratio authority shall produce no more gas than its gas limit as it would be reduced by the previously mentioned procedure absent the net gas/oil ratio authority.

(i) Priority categories. First purchasers of gas shall satisfy their pipeline system demand for gas by purchasing and accepting delivery of gas from the following priority categories in ascending numerical order. Lower priority category gas is gas from a higher numerical category. A first purchaser shall not within its pipeline system curtail gas from a priority category if the purchaser is purchasing and accepting delivery of lower priority category gas as a first purchaser on its same pipeline system. A first purchaser's purchases and acceptance of delivery of first, second, or third priority category gas under an obligation to purchase and accept delivery from the tailgate of a plant processing gas to extract liquids, or from a gathering system that purchases from wells and is required by contract or by its physical connections to sell its gas entirely to the purchaser, whether or not these purchases are made as a first purchaser, shall not be curtailed if the first purchaser is purchasing and accepting delivery of lower priority category gas as a first purchaser on its same pipeline system. If curtailed, the curtailment must be ratable with like priority category gas which the first purchaser is purchasing and accepting delivery of from wells on its same pipeline system.

(1) First priority shall be given to casinghead gas produced from certified tertiary recovery projects approved by the commission and secondary recovery projects involving water injection, gas injection, or pressure maintenance approved by the commission to prevent waste.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.32	**Gas Well Gas and Casinghead Gas Shall Be Utilized for Legal Purposes**

(a) The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Fugitive emissions--Releases of gas from lease production, gathering, compression, or gas plant equipment components, including emissions from valve stems, pressure relief valves, flanges and connections, gas-operated valves, compressor and pump seals, pumping well stuffing boxes, casing-to-casing bradenheads subject to the provisions of §3.17 of this title (relating to Pressure on Bradenhead), pits, and sumps, that cannot reasonably be captured and sold or routed to a vent or flare.

(2) Gathering system--Facilities employed to collect, compress, and transport gas to another gas gathering system, a gas plant, compression facility, or transmission line.

(3) Lease production facilities--Production, separation, treating, compression, flowlines, storage, and other production handling equipment employed on a lease in the production of gas, condensate, and oil.

(4) Low pressure separator gas--Gas separated or liberated from a gas-liquid stream in a low pressure separation facility. Low pressure separation facilities include but are not limited to separators, treaters, free water knockouts, and other associated equipment.

(5) Tank vapors--Gas which evolves from oil, condensate, or water when placed in a gunbarrel or storage tank.

(b) Activities authorized by this section may be subject to rules and regulations promulgated by the United States Environmental Protection Agency under the federal Clean Air Act or the Texas Commission on Environmental Quality under the Texas Clean Air Act.

(c) General Provisions. All gas from any oil well, gas well, gas gathering system, gas plant or other gas handling equipment shall be utilized for purposes and uses authorized by law, except as provided in this section. This section does not apply to gas transmission or gas distribution facilities or operations.

(d) Exempt Gas Releases.

(1) Releases of gas that are not readily measured by devices routinely used in the operation of oil wells, gas wells, gas gathering systems, or gas plants, such as meters, are not required by the commission to be reported or charged against lease allowable production and are not subject to the remaining requirements of this section. Releases of gas exempt from the requirements of this section under this paragraph include, but are not limited to, the following:

(A) tank vapors from crude oil storage tanks, gas well condensate storage tanks, or salt water storage tanks, including makeup gas for gas blanket maintenance;

(B) fugitive emissions of gas;

(C) amine treater, glycol dehydrator flash tank and/or reboiler emissions;

(D) blowdown gas from flow lines, gathering lines, meter runs, pressurized vessels, compressors, or other gas handling equipment for construction, maintenance or repair;

(E) gas purged from compressor cylinders or other gas handling equipment for startup;

(F) gas released at a wellsite during drilling operations and prior to the completion date of the well, including gas produced during air or gas drilling operations or gas which must be separated from drilling fluids using a mud-gas separator, or mud-degasser; or

(G) gas released at a wellsite during initial completion, recompletion in another field, or workover operations in the same field, including but not limited to perforating, stimulating, deepening, cleanout, well maintenance or repair operations.

(2) Notwithstanding the foregoing, the commission or the commission's delegate may require the flaring of releases of gas not readily measured by devices routinely used in the operation of oil wells, gas wells, gas gathering systems, or gas plants, such as meters, if the commission or the commission's delegate determines that flaring is required for safety reasons.

(e) Gas Releases to be Burned in a Flare.

(1) Except as otherwise provided in subsections (d), (f)(1)(B) and (C), (g)(2), or an exception granted under subsection (h) of this section, all gas releases of greater than 24 hours duration authorized under the provisions of this section shall be burned in a flare if the gas can be burned safely. All gas releases of 24 hours' duration or less authorized under the provisions of this section may be vented to the air if flaring is not required for safety reasons or by other regulation and the gas can be safely vented.

(2) Gas releases authorized under this section must be managed in accordance with the provisions of §3.36 of this title (relating to Oil, Gas, or Geothermal Resource Operation in Hydrogen Sulfide Areas) when applicable.

(3) An exception to the requirements of this subsection may be granted under subsection (h) by the commission or the commission's delegate to allow the venting of gas to the air for releases of greater than 24 hours' duration if the operator presents information that shows the gas cannot be both safely and continuously burned in a flare, and the gas can be safely vented.

(4) Notwithstanding the provisions of paragraph (1) of this subsection or an exception granted under subsection (h), the commission or the commission's delegate may require that the gas be flared if flaring is required for safety reasons.

(f) Gas Releases in Oil and Gas Production Operations.

(1) The following releases of gas resulting from routine oil and gas production operations are necessary in the efficient drilling and operation of oil and gas wells and are hereby authorized subject to the requirements of subsection (e) of this section. The released gas shall be measured or estimated in accordance with §3.27 of this title (relating to Gas To Be Measured and Surface Commingling of Gas) and reported and charged against lease allowable production.

(A) Gas may be released for a period not to exceed ten producing days after initial completion, recompletion in another field, or workover operations in the same field, including but not limited to perforating, stimulating, deepening, cleanout, well maintenance or repair operations.

(B) Gas from a well that must be unloaded or cleaned-up to atmospheric pressure may be vented to the air for periods not to exceed 24 hours in one continuous event or a total of 72 hours in one calendar month.

(C) In the event of a full or partial shutdown by a gas gathering system, compression facility, or gas plant, gas from a lease production facility served by that gas gathering system, compression facility or gas plant may be released for a period not to exceed 24 hours. The operator shall notify the appropriate commission district office by telephone or facsimile as soon as reasonably possible after the release of gas begins. An operator may continue the release by flaring or by venting of the gas, if flaring is not required for safety reasons or by other regulation, beyond the initial 24-hour period, pending commission approval or denial of a request for an administrative exception under subsection (h) of this section. The operator shall file the request with the commission by the end of the next full business day following the first 24 hours of the release unless the deadline is extended by the commission or the commission's delegate.

(D) Hydrocarbon gas contained in the waste stream from a membrane unit or molecular sieve used to remove carbon dioxide, hydrogen sulfide, or other contaminants from a gas stream may be released, provided that at least 85% of the hydrocarbon gas in the inlet gas stream is recovered and directed to a legal use.

(E) Low pressure separator gas, not to exceed 15 mcfd of hydrocarbon gas per gas well or 50 mcfd of hydrocarbon gas per commission-designated oil lease or commingling point for commingled operations, may be released.

(2) The commission or the commission's delegate may administratively grant or renew an exception to the requirements or limitations of this subsection subject to the requirements of subsection (h) to allow additional releases of gas if the operator of a well or production facility presents information to show the necessity for the release. The volume of gas that is released must be measured or estimated in accordance with §3.27 of this title (relating to Gas To Be Measured and Surface Commingling of Gas) and reported on the appropriate commission form and shall be charged to the operator's allowable production. Necessity for the release includes, but is not limited to, the following situations:

(A) Cleaning a well of solids or fluids or both for more than ten producing days following initial completion, recompletion in another field, or workover operations in the same field, including but not limited to perforating, stimulating, deepening, cleanout, or well maintenance or repair operations;

(B) Unloading excess formation fluid buildup in a wellbore for periods in excess of 24 hours in one continuous event or 72 hours total in one calendar month;

(C) Volumes of low pressure gas that can be measured with devices routinely used in oil and gas exploration, development, and production operations and that are not directed by an operator to a gas gathering system, gas pipeline, or other marketing facility, or other purposes and uses authorized by law due to mechanical, physical, or economic impracticability;

(D) For casinghead gas only, the unavailability of a gas pipeline or other marketing facility, or other purposes and uses authorized by law; or

(E) Avoiding curtailment of gas production which will result in a reduction of ultimate recovery from a gas well or oil reservoir.

(g) Gas releases from gas gathering system, gas plant or gas handling operations.

(1) The operator of a gas gathering system, gas plant, gas compressor facility or other gas handling equipment not directly associated with lease production of gas, shall not intentionally allow gas to be released for a period of more than 24 hours after the start of an upset condition. The operator shall notify the appropriate commission district office by telephone or facsimile as soon as reasonably possible after the release of gas begins. The volume of gas that is released must be measured or estimated in accordance with §3.27 of this title (relating to Gas To Be Measured and Surface Commingling of Gas) and reported on the appropriate commission form. The provisions of this subsection do not apply to accidental releases which are subject to or reported pursuant to any other commission rule.

(2) The commission or the commission's delegate may administratively grant or renew an exception to the requirements or limitations of this subsection and allow additional releases of gas for a period greater than 24 hours if the operator presents information that shows the necessity for the release. An operator may

continue the release by flaring or by venting of the gas, if flaring is not required for safety reasons or by other regulation, beyond the initial 24-hour period pending commission consideration of a request for an administrative exception under subsection (h) of this section. The request for exception is to be filed with the commission by the end of the next full business day following the first 24 hours of the release unless the deadline is extended by the commission or the commission's delegate. The following are examples of situations that may qualify for an exception under this paragraph:

(A) gas gathering system or gas plant construction, repairs or maintenance;

(B) gas plant turnaround; or

(C) emergency situations.

(h) Exceptions. The commission or the commission's delegate may administratively grant an exception authorized by this section provided that the requirements of this subsection are met.

(1) The request for an exception shall be accompanied by the fee required by §3.78(b)(5) of this title (relating to Fees and Financial Security Requirements).

(2) An administrative exception shall not exceed a period of 180 days.

(3) The 180-day limitation shall not apply for volumes of gas less than or equal to 50 mcf of hydrocarbon gas per day for each gas well, commission-designated oil lease, or commingled vent or flare point.

(4) Requests for exceptions for more than 180 days and for volumes greater than 50 mcf of hydrocarbon gas per day shall be granted only in a final order signed by the commission.

(5) A request for an exception to cover an operating emergency, system upset, or other unplanned condition may be submitted by facsimile transmission or other means, provided that an original signed request is accompanied by the fee required by subsection (h)(1) of this section and is received by the commission within three working days of the facsimile transmission request.

(6) Exceptions shall be issued to the operator of a gas well or commission-designated oil lease or commingling point for commingled operations and to the operator of a processing plant or other facility subject to this section.

(7) Exceptions are not transferable upon a change of operatorship. Operators shall have 90 days from the date of commission approval of a transfer of operatorship to review existing exceptions to this section and, if continuation of the exception is needed, to make application for a new exception. The existing exception and existing authority shall remain in effect during the 90-day review period. If an operator files an application and fee for a new exception before the 90-day review period expires and the 90-day review period expires before the commission acts on the application, the operator is authorized to continue to operate under the existing authority pending final commission action on the application.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.31	**Gas Reservoirs and Gas Well Allowable**

(a) General.

(1) Allowables of gas wells not currently assigned an allowable will not be made effective:

(A) prior to the well's completion or reclassification date; or

(B) more than 15 days prior to the date all reports or information necessary to the assignment of an allowable are received in the appropriate commission office.

(2) If a report or item of information necessary to the assignment of an allowable is not filed on time, there shall be a one-day allowable reduction for each day the report or information is late.

(b) Changes in gas well allowables.

(1) Changes in allowable of gas wells currently assigned an allowable will be effective on the date of the test or date of the change affecting the well's allowable (when the operator submits special tests or information), provided this is not more than 15 days prior to the date the special test or information is received in the appropriate district office.

(2) With respect to a multicompleted well, the allowable of the second and succeeding zones will be made effective no earlier than the date the last report or item necessary for the assignment of an allowable is received in the appropriate commission office.

(3) When a well is recompleted as a gas well in a different field, any overproduction that has occurred in the old field must be made up before an allowable will be assigned in the new field.

(c) Requirements for gas wells in a field for which an allocation formula has been adopted.

(1) If acreage is a factor in the allocation formula, a certified plat showing the acreage assigned to the well for proration purposes shall be submitted. The plat must be accompanied by a statement that all of the acreage claimed can reasonably be considered productive of gas and that the distance limitations of the field rules have not been exceeded. If all of the acreage claimed is not contained in a single lease, a certificate of pooling authority must be submitted, on the appropriate commission form. If the distance limitations of the field rules are shown to have been exceeded, the plat must show the number of acres within and beyond the distance limitations. An operator may request an exception to the distance limitations which may be administratively approved by the commission or a commission designee if all the acreage can be considered productive. If approval of the request is declined or protest is received, the request may be set for hearing. If all of the acreage cannot be considered productive, the plat must also show the productive limit of the acreage. If a plat shows acreage in the unit in excess of the maximum number of acres permitted by the field rules, it will not be accepted.

(2) If bottom-hole or reservoir pressure is a factor in the allocation formula, it shall be submitted on the appropriate commission form and shall be measured at, or corrected to, the proper datum plane.

(3) If any other information, data or parameter is a factor in the allocation formula, it must be submitted on the appropriate commission form.

(d) Determining prorated reservoir allowable and lawful market demand.

(1) On or before the 25th day of each month, the commission will determine the lawful market demand for gas to be produced from each reservoir during the upcoming allowable month. The monthly reservoir allowable shall be equal to the lawful market demand for that reservoir. The lawful reservoir market demand for prorated reservoirs shall be equal to the adjusted reservoir market demand forecast adjusted by a forecast

correction adjustment, and a commission adjustment (i.e., lawful reservoir market demand = adjusted reservoir market demand forecast + forecast correction adjustment + commission adjustment).

(A) Allowable month--The month during which allowables determined pursuant to this section will be effective.

(B) Adjusted reservoir market demand forecast--The sum of all operator reservoir market demand forecasts for a reservoir after any necessary downward adjustments have been made to individual operator reservoir market demand forecasts and optional operator forecasts so that no such forecast will exceed the total capability of the operator's wells for the reservoir during the allowable month.

(C) Operator reservoir market demand forecast--The sum of the operator's well forecasts for a reservoir determined by the commission pursuant to this subsection.

(i) The commission will determine a forecast for each well that will be active during the allowable month that:

(I) for prorated and limited wells is equal to the well's production during the same allowable month in the prior year; and

(II) for special or administrative special allowable wells is equal to the well's production during the most recently reported production month.

(ii) If the well had no reported production during the same allowable month in the prior year or if a special or administrative special allowable well had no reported production in the most recently reported production month, the forecast shall be equal to:

(I) the well's highest reported monthly production during any of the three most recently reported production months; or, if no production has been reported for those months;

(II) the well's capability.

(iii) Alternatively, the operator reservoir market demand forecast may be determined by an optional operator forecast.

(D) Optional operator forecast--The commission designated operator may file an optional market demand forecast for all of the operator's wells in the reservoir that is equal to the anticipated market demand for the production from the operator's wells in the field during the allowable month. The optional operator forecast for the operator's wells in the reservoir can be no greater than the total capability of the operator's wells or less than zero. An optional operator forecast must be filed by the 10th day of the month preceding the allowable month.

(E) Forecast correction adjustment--

(i) The February 1994 forecast correction adjustment shall be the reservoir market demand for November 1993 for all wells in a reservoir that are not administrative special allowable wells for February 1994, subtracted from the production reported for November 1993 for those wells;

(ii) The March 1994 forecast correction adjustment shall be the reservoir market demand for December 1993 for all wells in a reservoir that are not administrative special allowable wells for March 1994, subtracted from the production reported for December 1993 for those wells;

(iii) The April 1994 forecast correction adjustment shall be the reservoir market demand for January

1994 for all wells in a reservoir that are not administrative special allowable wells for April 1994, subtracted from the production reported for January 1994 for those wells;

(iv) For May 1994 and subsequent months, the forecast correction adjustment shall be equal to the total reservoir production from the most recent reported month, minus (total adjusted reservoir market demand forecast for the production month + supplemental change adjustment for that month + commission adjustment for that month), minus (production from all special and administrative special allowable wells minus allowable assigned to those special wells for that month).

(F) Supplemental change adjustment--Any adjustment to the reservoir allowable that is necessary to account for an automatic allowable revision in a prior month, a change of well or well test status during a prior month, the provisions of a final order modifying field or well production status, or any other ministerial change.

(G) Commission adjustment--Any other adjustments to the adjusted reservoir market demand forecast that the commission determines are necessary.

(2) The commission may reject or modify any optional operator forecast if it determines that the forecast is inaccurate or being used to manipulate the allocation of gas rather than to determine the reasonable market demand.

(e) Well capability.

(1) No gas well shall be given an initial allowable in excess of its capability.

(A) Except as provided in subparagraphs (B) and (C) of this paragraph, a well's capability is defined as the lesser of:

(i) the well's latest deliverability test on file with the commission; or

(ii) the well's highest monthly production during any of the three most recently reported production months.

(B) If a well is a special or an administrative special allowable well, its capability is defined as the lesser of:

(i) the well's latest deliverability test on file with the commission; or

(ii) the well's most recently reported monthly production.

(C) If a well is new to a reservoir and has been active for less than six months, its capability shall be defined as the well's latest deliverability test on file with the commission.

(2) An operator may submit a substitute capability determination for any well in a prorated field that represents the maximum monthly production capability of the well under normal operating conditions for a specific six-month period.

(A) The determination may be made on the basis of a well test or other acceptable information by a registered professional engineer who certifies that the determination was made by the engineer or under the supervision of the engineer, and that the capability has been determined in accordance with generally accepted engineering practices. Alternatively, the substitute capability determination may be made by an independent tester on the basis of a well test conducted in accordance with §3.28(c) of this title (relating to Potential and Deliverability of Gas Wells To Be Ascertained and Reported) (Statewide Rule 28). The request for a substitute capability must be submitted on the appropriate form.

(B) The commission or a commission designee may reject any substitute capability determination for good cause.

(C) The capability determined pursuant to this paragraph shall be used as the well's capability for a period of six months from the effective date of the determination unless:

(i) the operator files a written request that the substitute capability determination be cancelled. If such a request is submitted, the substitute capability may be cancelled by the commission or commission designee; or

(ii) an affected person files a protest alleging, with specificity, the inaccuracy or invalidity of the determination. If a protest is filed, the commission may set the matter for hearing. A protested substitute capability determination shall be effective on the intended effective date, unless the commission orders otherwise. If the commission determines that the protested substitute capability was incorrect, appropriate allowable or status adjustments will be made for the affected well.

(f) Fields operating under statewide rules. A statewide prorated field is any gas field in which no special field rules have been adopted and in which at least one well in the field has a current reported deliverability test of greater than 250 Mcf a day. Daily allowable production of gas from individual wells in a statewide prorated field shall be determined by allocating the allowable production among the individual wells in the proportion that each well's deliverability (based on the latest deliverability test of record) bears to the summation of the most recent reported deliverability tests of all wells producing from the same field. Allocated allowables shall be subject to the well capability provisions of this section.

(g) Definitions of prorated and nonprorated wells and fields.

(1) A prorated well is a well for which an allowable is determined by an allocation formula.

(2) A nonprorated well is a well for which an allowable is not determined by an allocation formula.

(3) A prorated field is a field that has two or more wells one of which is a prorated well.

(4) A nonprorated field is any field that is not a prorated field.

(5) Statewide Exempt Fields:

(A) A statewide exempt field is any gas field in which no special field rules have been adopted and in which no well in the field has a current reported deliverability test of greater than 250 Mcf per day. Wells in statewide exempt fields shall be assigned allowables equal to their capacity to produce but in no event greater than 250 Mcf per day.

(B) In fields where special field rules exist and no well has a current deliverability test of greater than 250 Mcf per day, an operator may request statewide exempt field status. The request may be granted administratively by the commission or commission designee if the applicant provides the commission with a declaration, signed by all operators, subject to the false filing penalties provided for in the Texas Natural Resources Code, §91.143, stating all operators in the field agree to exempt status. If declarations are not provided from all operators in the field or if the commission or commission designee declines to grant any request administratively, the applicant may request a hearing. If a notice of intent to appear in protest of the application has not been filed by five days before the date of the hearing, then there shall be a presumption that each well's first purchaser has a market for 100% of the well's deliverability as determined by the most recent deliverability tests on file with the Commission and that granting exempt status to the field will not harm correlative rights or cause waste and exempt status will be granted. Wells in exempt fields with special rules shall be assigned allowables equal to their capability to produce but in no event greater than 250 Mcf per day. If 250 Mcf per day is exceeded by any well, the field will be changed to the existing special field rule allocation. Reinstatement of allocation formula may be initiated by the commission designee, or by one of the operators in the field.

<<Prev Rule Next Rule>>

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.30	**Memorandum of Understanding between the Railroad Commission of Texas (RRC) and the Texas Commission on Environmental Quality (TCEQ)**

(a) Need for agreement.

(1) Section 10 of House Bill 1407, 67th Legislature, 1981, which appeared as a footnote to the Texas Solid Waste Disposal Act, Texas Civil Statutes, Article 4477-7, provides as follows: On or before January 1, 1982, the Texas Department of Water Resources, the Texas Department of Health, and the Railroad Commission of Texas shall execute a memorandum of understanding that specifies in detail these agencies' interpretation of the division of jurisdiction among the agencies over waste materials that result from or are related to activities associated with the exploration for and the development, production, and refining of oil or gas. The agencies shall amend the memorandum of understanding at any time that the agencies find it to be necessary.

(2) The original Memorandum of Understanding (MOU) between the agencies became effective January 1, 1982. The MOU was revised effective December 1, 1987, to reflect legislative clarification of the Railroad Commission's jurisdiction over oil and gas wastes and the Texas Water Commission's (successor to the Texas Department of Water Resources) jurisdiction over industrial and hazardous wastes.

(3) The agencies have determined that the revised MOU that became effective on December 1, 1987, should again be revised to further clarify jurisdictional boundaries and to reflect legislative changes in agency responsibility and the combination of the Texas Water Commission, the Texas Air Control Board, and portions of the Texas Department of Health to form the Texas Natural Resource Conservation Commission.

(b) General agency jurisdictions.

(1) Texas Commission on Environmental Quality (TCEQ) (the successor agency to the Texas Natural Resource Conservation Commission (TNRCC)). References in this section to TCEQ shall mean TCEQ or any successor agencies.

(A) The TCEQ has jurisdiction over solid waste under Chapter 361 of the Texas Health and Safety Code, §§361.001-361.754. The TCEQ's jurisdiction encompasses both hazardous and nonhazardous, industrial and municipal, solid wastes.

(B) Under Texas Health and Safety Code, §361.003(34), solid waste under the jurisdiction of the TCEQ is defined to include "garbage, rubbish, refuse, sludge from a waste treatment plant, water supply treatment plant, or air pollution control facility, and other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from industrial, municipal, commercial, mining, and agricultural operations and from community and institutional activities."

(C) Solid waste is further defined in Texas Health and Safety Code, §361.003(34), to exclude "material which results from activities associated with the exploration, development, or production of oil or gas or geothermal resources and other substance or material regulated by the Railroad Commission of Texas pursuant to Section 91.101, Natural Resources Code...."

(D) In addition, Texas Health and Safety Code, §361.003(34), defines the term solid waste to include the following until the United States Environmental Protection Agency (EPA) delegates its authority under the Resource Conservation and Recovery Act, 42 United States Code (U.S.C.) §6901, et seq., (RCRA) to the RRC: "waste, substance or material that results from activities associated with gasoline plants, natural gas or natural gas liquids processing plants, pressure maintenance plants, or repressurizing plants and is a hazardous waste as defined by the administrator of the EPA...."

(E) After delegation of RCRA authority to the Railroad Commission of Texas (RRC), the definition of solid waste (which defines TCEQ's jurisdiction) will not include hazardous wastes generated at natural gas or natural gas liquids processing plants, or reservoir pressure maintenance or repressurizing plants. The term natural gas or natural gas liquids processing plant refers to a plant the primary function of which is the extraction of natural gas liquids from field gas or fractionation of natural gas liquids. The term does not include a separately located natural gas treating plant for which the primary function is the removal of carbon dioxide, hydrogen sulfide, or other impurities from the natural gas stream. A separator, dehydration unit, heater treater, sweetening unit, compressor, or similar equipment is considered a part of a natural gas or natural gas liquids processing plant only if it is located at a plant the primary function of which is the extraction of natural gas liquids from field gas or fractionation of natural gas liquids. Further, a pressure maintenance or repressurizing plant is a plant for processing natural gas for reinjection (for reservoir pressure maintenance or repressurization) in a natural gas recycling project. A compressor station along a natural gas pipeline system or a pump station along a crude oil pipeline system is not a pressure maintenance or repressurizing plant.

(2) Railroad Commission of Texas (RRC).

(A) Generally, under Texas Natural Resources Code, Title 3, and Texas Water Code, Chapter 26, wastes (both hazardous and nonhazardous) resulting from activities associated with the exploration, development, or production of oil or gas or geothermal resources, including transportation of crude oil or natural gas by pipeline, and other activities regulated by the RRC are under the jurisdiction of the RRC. These wastes are termed "oil and gas wastes." In compliance with Texas Health and Safety Code, §361.025 (concerning exempt activities), a list of activities that generate wastes that are subject to the jurisdiction of the RRC is found at §3.8(a)(30) of this title (relating to Water Protection) and at 30 Texas Administrative Code §335.1 (concerning definitions), which contains a definition of "activities associated with the exploration, development, and production of oil or gas or geothermal resources." This MOU provides further guidance regarding the agencies' interpretation of these rules and statutes.

(B) Notwithstanding subparagraph (A) of this paragraph, hazardous wastes generated at natural gas or natural gas liquids processing plants or reservoir pressure maintenance or repressurizing plants are subject to the jurisdiction of the TCEQ until the RRC is authorized by EPA to administer RCRA. When the RRC is authorized by EPA to administer RCRA, jurisdiction over such hazardous wastes will transfer from the TCEQ to the RRC.

(c) Definition of hazardous waste.

(1) Under the Texas Health and Safety Code, §361.003(12), a "hazardous waste" subject to the jurisdiction of the TCEQ is defined as "solid waste identified or listed as a hazardous waste by the administrator of the United States Environmental Protection Agency under the federal Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (42 U.S.C. §6901, et seq.)." Similarly, under Texas Natural Resources Code, §91.601(1), "oil and gas hazardous waste" subject to the jurisdiction of the RRC is defined as an "oil and gas waste that is a hazardous waste as defined by the administrator of the United States Environmental Protection Agency under the federal Solid Waste Disposal Act, as amended

by the Resource Conservation and Recovery Act of 1976 (42 U.S.C. §6901, et seq.)."

(2) Federal regulations adopted under authority of the federal Solid Waste Disposal Act, as amended by RCRA, exempt from regulation as hazardous waste certain oil and gas wastes. Under 40 Code of Federal Regulations (CFR) §261.4(b)(5), "drilling fluids, produced waters, and other wastes associated with the exploration, development, or production of crude oil, natural gas or geothermal energy" are described as wastes that are exempt from federal hazardous waste regulations.

(3) A partial list of wastes associated with oil, gas, and geothermal exploration, development, and production that are considered exempt from hazardous waste regulation under RCRA can be found in EPA's "Regulatory Determination for Oil and Gas and Geothermal Exploration, Development and Production Wastes," 53 FedReg 25,446 (July 6, 1988). A further explanation of the exemption can be found in the "Clarification of the Regulatory Determination for Wastes from the Exploration, Development and Production of Crude Oil, Natural Gas and Geothermal Energy, " 58 FedReg 15,284 (March 22, 1993). The exemption codified at 40 CFR §261.4(b)(5) and discussed in the Regulatory Determination has been, and may continue to be, clarified in subsequent guidance issued by the EPA.

(d) Jurisdiction over specific disposal activities.

(1) Discharges under Texas Water Code, Chapter 26. Under the Texas Water Code, Chapter 26, the TCEQ has jurisdiction over discharges of waste into or adjacent to water in the state, other than discharges regulated by the RRC. The RRC regulates discharges of waste from activities associated with the exploration, development, or production of oil, gas, or geothermal resources, including transportation of crude oil and natural gas by pipeline, and from solution brine mining activities (except solution mining activities conducted for the purpose of creating caverns in naturally-occurring salt formations for the storage of wastes regulated by the TCEQ) under Texas Natural Resources Code, Title 3, and Texas Water Code, Chapter 26. Discharges of waste regulated by the RRC into water in the state shall not cause a violation of the water quality standards. While water quality standards are established by the TCEQ, the RRC has the responsibility for enforcing any violations of such standards. Texas Water Code, Chapter 26, does not require that discharges regulated by the RRC comply with regulations of the TCEQ that are not water quality standards. Because of the complexity of 30 Texas Administrative Code §307.6 (concerning toxic materials), the staffs of the TCEQ and the RRC will consult from time to time regarding application and interpretation of the Texas Surface Water Quality Standards.

(2) Disposal wells under Texas Water Code, Chapter 27. Jurisdiction over wastes disposed by injection is divided between the RRC and the TCEQ as set forth in Texas Water Code, Chapter 27 (the Injection Well Act). The RRC has jurisdiction under Texas Water Code, Chapter 27, over injection wells used to dispose of oil and gas waste. Texas Water Code, Chapter 27, defines "oil and gas waste" to mean "waste arising out of or incidental to drilling for or producing of oil, gas, or geothermal resources, waste arising out of or incidental to the underground storage of hydrocarbons other than storage in artificial tanks or containers, or waste arising out of or incidental to the operation of gasoline plants, natural gas processing plants, or pressure maintenance or repressurizing plants. The term includes but is not limited to salt water, brine, sludge, drilling mud, and other liquid or semi-liquid waste material." The term "waste arising out of or incidental to drilling for or producing of oil, gas, or geothermal resources" includes waste associated with transportation of crude oil or natural gas by pipeline pursuant to Texas Natural Resources Code, §91.101. The TCEQ has jurisdiction over injection wells used to dispose of other types of waste.

(3) Disposal of naturally occurring radioactive material (NORM). (The term "disposal" does not include receipt, possession, use, processing, transfer, transport, storage, or commercial distribution of radioactive materials, including NORM. These activities are under the jurisdiction of the Texas Department of Health per Texas Health and Safety Code, §401.011(a).)

(A) Under Texas Health and Safety Code, §401.415, the RRC has jurisdiction over the disposal of NORM that constitutes, is contained in, or has contaminated oil and gas waste. This waste material is called "oil and gas NORM waste." Oil and gas NORM waste may be generated in connection with the exploration, development, or production of oil or gas. Oil and gas NORM waste may also be generated in connection with geothermal resource exploration, development, or production activities or solution brine mining activities.

(B) Under Texas Health and Safety Code, §401.412, the TCEQ has jurisdiction over the disposal of NORM which is not oil and gas NORM waste.

(e) Jurisdiction over waste from specific oil and gas activities.

(1) Drilling, operation, and plugging of wells associated with the exploration, development, or production of oil, gas, or geothermal resources. Wells associated with the exploration, development, or production of oil, gas, or geothermal resources include exploratory wells, cathodic protection holes, core holes, oil wells, gas wells, geothermal resource wells, fluid injection wells used for secondary or enhanced recovery of oil or gas, oil and gas waste disposal wells, and injection water source wells. Several types of waste materials can be generated during the drilling, operation, and plugging of these wells. These waste materials include drilling fluids (including water-based and oil-based fluids), cuttings, produced water, produced sand, waste hydrocarbons (including used oil), fracturing fluids, spent acid, workover fluids, treating chemicals (including scale inhibitors, emulsion breakers, paraffin inhibitors, and surfactants), waste cement, filters (including used oil filters), domestic sewage (including waterborne human waste and waste from activities such as bathing and food preparation), and trash (including inert waste, barrels, dope cans, oily rags, mud sacks, and garbage). Generally, these wastes, whether disposed of by discharge, landfill, land farm, evaporation, or injection, are subject to the jurisdiction of the RRC.

(2) Field treatment of produced fluids. Oil, gas, and water produced from oil, gas, or geothermal resource wells may be treated in the field in facilities such as separators, skimmers, heater treaters, dehydrators, and sweetening units. Waste materials that result from the field treatment of oil and gas include waste hydrocarbons (including used oil), produced water, hydrogen sulfide scavengers, dehydration wastes, treating and cleaning chemicals, filters (including used oil filters), asbestos insulation, domestic Cont'd...

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.28	**Potential and Deliverability of Gas Wells To Be Ascertained and Reported**

(a) The information necessary to determine the absolute daily open flow potential of each producing associated or nonassociated gas well shall be ascertained, and a report shall be filed as required on the appropriate Commission form in the appropriate Commission office within 30 days of completion of the well. The test shall be performed in accordance with the commission's publication, Back Pressure Test for Natural Gas Wells, State of Texas, or other test procedure approved in advance by the Commission and shall be reported on the Commission's prescribed form. An operator, at his option, may determine absolute open flow potential from a stabilized one-point test. For a one-point test, the well shall be flowed on a single choke setting until a stabilized flow is achieved, but not less than 72 hours. The shut-in and flowing bottom hole pressures shall be calculated in the manner prescribed for a four-point test. The Commission may authorize a one-point test of shorter duration for a well which is not connected to a sales line, but a test which is in compliance with this section must be conducted and reported after the well is connected before an allowable will be assigned to the well. Back-dating of allowables will be performed in accordance with §3.31 of this title (relating to Gas Reservoirs and Gas Well Allowable).

(b) After conducting the test required by subsection (a) of this section each operator of a gas well shall conduct an initial deliverability test not later than ten days after the start of production for one or more legal purposes and shall report such initial deliverability test on the prescribed form. If a 72-hour one-point back pressure test on a well connected to a sales line was conducted as provided in subsection (a) of this section, the same test may be used to determine initial deliverability, provided the test was conducted in accordance with subsection (c) of this section. After the initial deliverability test has been conducted, the following schedule for well testing applies. Nonassociated gas wells shall be tested semiannually. Associated 49(b) gas wells shall be tested annually. Wells with current reported deliverability of 100 Mcf a day or less are not required to test as long as deliverability and production remain at or below 100 Mcf a day but are required to file Form G-10 according to the instructions on the form. Wells with a deliverability greater than 100 Mcf a day and less than or equal to 250 Mcf a day in fields without special field rules are not required to be tested as long as deliverability and production remain equal to or less than 250 Mcf a day. Wells operating under special field rules which conflict with this subsection shall test in accordance with the special field rules. Notwithstanding the above provisions on frequency of testing, gas wells commingling liquid hydrocarbons before metering must comply with the testing provisions applicable to such wells. All deliverability tests shall be conducted in accordance with subsection (c) of this section and the instructions printed on the Form G-10. The results of each test shall be attested to by the operator or his appointed agent. The first purchaser or its representative upon request to the operator shall have the right to witness such tests. Gas meter charts, printouts, or other documents showing the actual measurement of the gas produced or other data required to be recorded during any deliverability test conducted under this subsection shall be preserved as required by §3.1 of this title (relating to Organization Report; Retention of Records; Notice Requirements) (Statewide Rule 1). In the event that the first purchaser and the operator cannot agree upon the validity of the test results, then either party may request a retest of the well. The first purchaser upon request to the operator shall have the right to witness the retest. If either party requests a representative from the Commission to witness a retest of the well, the results of a Commission-witnessed test shall be conclusive for the purposes of this section until the next regularly scheduled test of the well. In the event a retest is witnessed by the Commission, the retest shall be signed by the representative of the Commission. In the event that downhole remedial work or other substantial production enhancement work is performed, or if a pumping unit, compressor, or other equipment is installed to increase deliverability of a well subject to the Commission-witnessed testing procedure described in this subsection, a new test may be requested and shall be performed according to the procedure outlined in this subsection.

(c) Unless applicable special field rules provide otherwise or the director of the oil and gas division or the director's delegate authorizes an alternate procedure due to a well's producing characteristics, deliverability tests shall be performed as follows. Deliverability tests shall be scheduled by the producer within the testing period designated by the Railroad Commission, and only the recorded data specified by the Form G-10 is required to be reported. All deliverability tests shall be performed by producing the subject well at stabilized rates for a minimum time period of 72 hours. A deliverability test shall be conducted under normal and usual operating conditions using the normal and usual operating equipment in place on the well being tested, and the well shall be produced against the normal and usual line pressure prevailing in the line into which the well produces. The average daily producing rate for each 24-hour period, the wellhead pressure before the commencement of the 72-hour test, and the flowing wellhead pressure at the beginning of each 24-hour period shall be recorded. In addition, a 24-hour shut-in wellhead pressure shall be determined either within the six-month period prior to the commencement of the 72-hour deliverability test or immediately after the completion of the deliverability test. The shut-in wellhead pressure that was determined and the date on which the 24-hour test was commenced shall be recorded on Form G-10. Exceptions and extensions to the timing requirements for deliverability tests and shut-in wellhead pressure tests may be granted by the Commission for good cause. The flow rate during each day of the first 48 hours of the test must be as close as possible to the flow rate during the final 24 hours of the test, but must equal at least 75% of such flow rate. The deliverability of the well during the last 24 hours of the flow test shall be used for allowable and allocation purposes. If pipeline conditions exist such that a producer believes a representative deliverability test cannot be performed, the producer with pipeline notification may request in writing that the commission use either of the following as a representative deliverability:

(1) the deliverability test performed during the previous testing period; or

(2) the maximum daily production from any of the 12 months prior to the due date of the test as determined by dividing the highest monthly production by the number of days in that month.

(d) If the deliverability of a well changes after a test is reported to the Commission, the deliverability of record for a well will be decreased upon receipt of a written request from the operator to reduce the deliverability of record to a specified amount. If the deliverability of a well increases, a retest must be conducted in the manner specified in this section and must be reported on Form G-10 before the deliverability of record will be increased.

(e) First purchasers with packages of gas dedicated entirely to a downstream purchaser shall coordinate testing with and provide test results to that downstream purchaser if requested by the downstream purchaser. In these cases, the downstream purchaser upon request to the operator shall have the right to witness all deliverability tests and retests.

(f) Tests of wells connected to a pipeline shall be made in a manner that no gas is flared, vented, or otherwise wastefully used.

Source Note: The provisions of this §3.28 adopted to be effective September 1, 1986, 11 TexReg 3680; amended to be effective October 12, 1998, 23 TexReg 10397; amended to be effective February 28, 2000, 25 TexReg 1592; amended to be effective November 24, 2004, 29 TexReg 10728

Next Rule>>

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.27	**Gas To Be Measured and Surface Commingling of Gas**

(a) All natural gas, except casinghead gas, produced from wells shall be measured, with each completion being measured separately, before the gas leaves the lease, and the producer shall report the volume produced from each completion to the commission. Exceptions to this provision may be granted by the commission upon written application.

(b) All casinghead gas sold, processed for its gasoline content, used in a field other than that in which it is produced, or used in cycling or repressuring operations, shall be measured before the gas leaves the lease, and the producer shall report the volume produced to the commission. Exceptions to this provision may be granted by the commission upon written application.

(c) All casinghead gas produced in this state which is not covered by the provisions of subsection (b) of this section, shall be measured before the gas leaves the lease, is used as fuel, or is released into the air, based on its use or on periodic tests, and reported to the commission by the producer. The volume of casinghead gas produced by wells exempt from gas/oil ratio surveys must be estimated, based on general knowledge of the characteristics of the wells. Exceptions to this provision may be granted by the commission upon written application.

(d) Releases and production of gas at a volume or daily flow rate, commonly referred to as "too small to measure" (TSTM), which, due to minute quantity, cannot be accurately determined or for which a determination of gas volume is not reasonably practical using routine oil and gas industry methods, practices, and techniques are exempt from compliance with this rule and are not required to be reported to the commission or charged against lease allowable production.

(e) In order to prevent waste, to promote conservation or to protect correlative rights, the commission may approve surface commingling of gas or oil and gas described in subsections (a), (b) or (c) of this section and produced from two or more tracts of land producing from the same commission-designated reservoir or from one or more tracts of land producing from different commission-designated reservoirs in accordance with §3.26(b) of this title (relating to Separating Devices, Tanks, and Surface Commingling of Oil).

(f) In reporting gas well production, the full-well stream gas shall be reported and charged against each gas well for allowable purposes. All gas produced, including all gas used on the lease or released into the air, must be reported regardless of its disposition.

(g) If gas is produced from a lease or other property covered by the coastal or inland waters of the state, the gas produced may, at the option of the operator, be measured on a shore or at a point removed from the lease or other property from which it was produced.

(h) All natural hydrocarbon gas produced and utilized from wells completed in geothermal resource reservoirs shall be measured and allocated to each individual lease based on semiannual tests conducted on full well stream lease production.

(i) For purposes of this rule, "measured" shall mean a determination of gas volume in accordance with this rule and other rules of the commission, including accurate estimates of unmetered gas volumes released into the air or used as fuel.

(j) No meter or meter run used for measuring gas as required by this rule shall be equipped with a manifold which will allow gas flow to be diverted or bypassed around the metering element in any manner unless it is of the type listed in paragraphs (1) or (2) of this subsection:

(1) double chambered orifice meter fittings with proper meter manifolding to allow equalized pressure across the meter during servicing;

(2) double chambered or single chambered orifice meter fittings equipped with proper meter manifolding or other types of metering devices accompanied by one of the following types of meter inspection manifolds:

(A) a manifold with block valves on each end of the meter run and a single block valve in the manifold complete with provisions to seal and a continuously maintained seal record;

(B) an inspection manifold having block valves at each end of the meter run and two block valves in the manifold with a bleeder between the two and with one valve equipped with provisions to seal and continuously maintained seal records;

(C) a manifold equipped with block valves at each end of the meter run and one or more block valves in the manifold, when accompanied by a documented waiver from the owner or owners of at least 60% of the royalty interest and the owner or owners of at least 60% of the working interest of the lease from which the gas is produced.

(k) Whenever sealing procedures are used to provide security in the meter inspection manifold systems, the seal records shall be maintained for at least three years at an appropriate office and made available for Railroad Commission inspection during normal working hours. At any time a seal is broken or replaced, a notation will be made on the orifice meter chart along with graphic representation of estimated gas flow during the time the meter is out of service.

(l) All meter requirements apply to all meters which are used to measure lease production, including sales meters if sales meter volumes are allocated back to individual leases.

(m) The commission may grant an exception to measurement requirements under subsections (a), (b) and (c) of this section if the requirements of this subsection are met. An exception granted under this subsection will be revoked if the most recent well test or production reported to the commission reflects a production rate of more than 20 MCF of gas per day or if any of the other requirements for an exception under this subsection are no longer satisfied. An applicant seeking an exception under this subsection must file an application establishing:

(1) the most recent production test reported to the commission demonstrates that the gas well or oil lease for which an exception is sought produces at a rate of no more than 20 MCF of gas per day;

(2) an annual test of the production of the gas well or oil lease provides an accurate estimate of the daily rate of gas flow;

(3) the flow rate established in paragraph (2) of this subsection multiplied by the recorded duration determined by any device or means that accurately records the duration of production each month yields an accurate estimate of monthly production; and

(4) the operator of the pipeline connected to the gas well or oil lease concurs in writing with the

application.

(n) Failure to comply with the provisions of this rule will result in severance of the producing well, lease, facility, or gas pipeline or in other appropriate enforcement proceeding.

Source Note: The provisions of this §3.27 adopted to be effective January 1, 1976; amended to be effective April 12, 1983, 8 TexReg 1019; amended to be effective March 10, 1986, 11 TexReg 901; amended to be effective June 23, 1997, 22 TexReg 5747.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.26	**Separating Devices, Tanks, and Surface Commingling of Oil**

(a) Where oil and gas are found in the same stratum and it is impossible to separate one from the other, or when a well has been classified as a gas well and such gas well is not connected to a cycling plant and such well is being produced on a lease and the gas is utilized under Texas Natural Resources Code §§86.181 - 86.185, the operator shall install a separating device of approved type and sufficient capacity to separate the oil and liquid hydrocarbons from the gas.

(1) The separating device shall be kept in place as long as a necessity for it exists, and, after being installed, such device shall not be removed nor the use thereof discontinued without the consent of the commission.

(2) All oil and any other liquid hydrocarbons as and when produced shall be adequately measured according to the pipeline rules and regulations of the commission before the same leaves the lease from which they are produced, except for gas wells where the full well stream is moved to a plant or central separation facility in accordance with §3.55 of this title (relating to Reports on Gas Wells Commingling Liquid Hydrocarbons before Metering) (Statewide Rule 55) and the full well stream is measured, with each completion being separately measured, before the gas leaves the lease.

(3) Sufficient tankage and separator capacity shall be provided by the producer to adequately take daily gauges of all oil and any other liquid hydrocarbons unless LACT equipment, installed and operated in accordance with the latest revision of American Petroleum Institute (API) Manual of Petroleum Measurement Standards, Chapter 6.1 or another method approved by the commission or its delegate, is being used to effect custody transfer.

(b) In order to prevent waste, to promote conservation or to protect correlative rights, the commission may approve surface commingling of oil, gas, or oil and gas production from two or more tracts of land producing from the same commission-designated reservoir or from one or more tracts of land producing from different commission-designated reservoirs as follows:

(1) Administrative approval. Upon written application, the commission may grant approval for surface commingling administratively when any one of the following conditions is met:

(A) The tracts or commission-designated reservoirs have identical working interest and royalty interest ownership in identical percentages and therefore there is no commingling of separate interests;

(B) Production from each tract and each commission-designated reservoir is separately measured and therefore there is no commingling of separate interests; or

(C) When the tracts or commission-designated reservoirs do not have identical working interest and royalty interest ownership in identical percentages and the commission has not received a protest to an application within 21 days of notice of the application being mailed by the applicant to all working and royalty interest owners or, if publication is required, within 21 days of the date of last publication and the applicant provides:

(i) a method of allocating production to ensure the protection of correlative rights, in accordance with paragraph (3) of this subsection; and

(ii) an affidavit or other evidence that all working interest and royalty interest owners have been notified of the application by certified mail or have provided applicant with waivers of notice requirements; or

(iii) in the event the applicant is unable, after due diligence, to provide notice by certified mail to all working interest and royalty interest owners, a publisher's affidavit or other evidence that the commission's notice of application has been published once a week for four consecutive weeks in a newspaper of general circulation in the county or counties in which the tracts that are the subject of the application are located.

(2) Request for hearing. When the tracts or commission-designated reservoirs do not have identical working interest and royalty interest ownership in identical percentages and a person entitled to notice of the application has filed a protest to the application with the commission, the applicant may request a hearing on the application. The commission shall give notice of the hearing to all working interest and royalty interest owners. The commission may permit the commingling if the applicant demonstrates that the proposed commingling will protect the rights of all interest owners in accordance with paragraph (3) of this subsection and will prevent waste, promote conservation or protect correlative rights.

(3) Reasonable allocation required. The applicant must demonstrate to the Commission or its designee that the proposed commingling of hydrocarbons will not harm the correlative rights of the working or royalty interest owners of any of the wells to be commingled. The method of allocation of production to individual interests must accurately attribute to each interest its fair share of aggregated production.

(A) In the absence of contrary information, such as indications of material fluctuations in the monthly production volume of a well proposed for commingling, the Commission will presume that allocation based on the daily production rate for each well as determined and reported to the Commission by semi-annual well tests will accurately attribute to each interest its fair share of production without harm to correlative rights. As used in this section, "daily production rate" for a well means the 24 hour production rate determined by the most recent well test conducted and reported to the commission in accordance with §§3.28, 3.52, 3.53, and 3.55 of this title (relating to Potential and Deliverability of Gas Wells To Be Ascertained and Reported, Oil Well Allowable Production, Annual Well Tests and Well Status Reports Required, and Reports on Gas Wells Commingling Liquid Hydrocarbons before Metering).

(B) Operators may test commingled wells annually after approval by the Commission or the commission's delegate of the operator's written request demonstrating that annual testing will not harm the correlative rights of the working or royalty interest owners of the commingled wells. Allocation of commingled production shall not be based on well tests conducted less frequently than annually.

(C) Nothing in this section prohibits allocations based on more frequent well tests than the semi-annual well test set out in subparagraph (A) of this paragraph. Additional tests used for allocation do not have to be filed with the commission but must be available for inspection at the request of the commission, working interest owners or royalty interest owners.

(D) Allocations may be based on a method other than periodic well tests if the Commission or its designee determines that the alternative allocation method will insure a reasonable allocation of production as required by this paragraph.

(4) Additional notice required. In addition to giving notice to the persons entitled to notice under paragraph (1)(C) of this subsection, an applicant for a surface commingling exception must give notice of the application to the operator of each tract adjacent to one or more of the tracts proposed for commingling that has one or more wells producing from the same commission-designated reservoir as any well proposed for

commingling if:

(A) any one of the wells proposed for commingling produces from a commission-designated reservoir for which special field rules have been adopted; or

(B) any one of the wells proposed for commingling produces from multiple commission-designated reservoirs, unless:

(i) an exception to §3.10 of this title (relating to Restriction of Production of Oil and Gas from Different Strata) has previously been obtained for production from the well; or

(ii) the applicant continues to separately measure production from each different commission-designated reservoir produced from the same wellbore.

(c) If oil or any other liquid hydrocarbon is produced from a lease or other property covered by the coastal or inland waters of the state, the liquid produced may, at the option of the operator, be measured on a shre or at a point removed from the lease or other property on which it is produced.

(d) Oil gravity tests and reports (Reference Order Number 20-55, 647, effective 4-1-66, and Reference Order Number 20-58, 528, effective 5-10-68.) If oil or any other liquid hydrocarbon is produced from a lease or other property covered by the coastal or inland waters of the state, the liquid produced may, at the option of the operator, be measured on a shore or at a point removed from the lease or other property on which it is produced.

(1) Where individual lease oil production, or authorized commingled oil production, separator, treating, and/or storage vessels, other than conventional emulsoin breaking treaters, are connected to a gas gathering system so that heat or vacuum may be applied prior to oil measurement for commission-required production reports, the operator may, at his option, apply heat or vacuum to the oil only to the extent the average gravity of the stock tank oil will not be reduced below a limiting gravity for each lease as established by an average oil gravity test conducted under the following conditions (Reference Order Number 20-55, 647, effective 4-1-66):

(A) the separator or separator system, which shall include any type vessel that is used to separate hydrocarbons, shall be operated at not less than atmospheric pressure;

(B) no heat shall be applied;

(C) the test interval shall be for a minimum of 24 hours, and the average oil gravity after weathering for not more than 24 hours shall then become the limiting gravity factor for applying heat or vacuum to unmeasured oil on the tested lease.

(2) Initial gravity tests shall be made by the operator when such separator, treating, and/or storage vessels are first used pursuant to this section. Subsequent tests shall be made at the request of either the commission or any interested party; and such subsequent tests shall be witnessed by the requesting party. Any interested party may witness the tests.

(3) Each operator shall enter on the face of his required production report the gravity of the oil delivered to market from the lease reported, and it is provided that should a volume of oil delivered to market from such lease separation facilities not meet the gravity requirement established by the described test, adjustment shall be made by charging the allowable of the lease on the relationship of the volume and the gravity of the particular crude.

(4) Where a conventional heater treater is required and is used only to break oil from an emulsion prior to oil measurement, this section will not be applicable; provided, however, that by this limitation on the section, it is not intended that excessive heat may be used in conventional heater treater, and in circumstances where such heater treater is connected to a gas gathering system and it is found by commission investigation made on its own volition or on complaint of any interested party that excessive heat is used, either the provisions of this section or special restrictive regulation may be made applicable.

Source Note: The provisions of this §3.26 adopted January 1, 1976; amended to be effective February 23, 1979, 4 TexReg 436; amended to be effective March 10, 1986, 11 TexReg 901; amended to be effective February 18, 1994, 19 TexReg 783; amended to be effective June 23, 1997, 22 TexReg 5747; amended to be effective May 1, 2000, 25 TexReg 3741; amended to be effective November 24, 2004, 29 TexReg 10728

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.25	**Use of Common Storage**

(a) In all fields or areas in which the commission has approved the use of common storage where oil is produced from two or more separate reservoirs or zones and separate proration schedules are published by the commission for each reservoir or zone, the operator of said lease shall not be required to file a separate Producer's Certificate of Compliance and Authorization to Transport Oil or Gas From Lease Form for each reservoir or zone, but may file one form to authorize the transportation of oil or gas from all reservoirs or zones producing into common storage.

(b) A gatherer transporting oil from such common storage shall not be required to file a separate transporter's report for each separate reservoir or zone or each separate lease but shall file such report on a combined basis for the total amount of commingled oil in common storage.

(c) The operator of a lease or leases for which the commission has authorized the use of common storage of oil produced from two or more reservoirs or zones and from two or more leases shall file a Monthly Producer's Report for each separate reservoir or zone and/or for each separate lease and, in addition thereto, said operator shall file a report showing the data included on the individual reports on a combined basis for the total amount of commingled oil in common storage.

Source Note: The provisions of this §3.25 adopted to be effective January 1, 1976.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.24	**Check Valves Required**

(a) Where two or more wells are being produced through a common line, a common separator, or a common manifold, the flow lines leading from each well to such common line, common separator, or common manifold shall be equipped with a check valve or other means of shut-off which shall at all times be kept in good working order. The check valve or other means of shut-off shall be placed in each flow line above the surface of the ground and shall be located in the flow line as close to the wellhead connection as is practicable. Where a manifold system is employed in which each well produced through the manifold system has its own individual flow line leading from the wellhead to the manifold, then it shall be permissible for the check valve or other means of shut-off to be placed in the flow line near a point where the flow line enters the manifold system. The check valve or other means of shut-off must be above ground, and must be in the flow line serving the well and must be located between the wellhead and the point where the flow line connects with any other flow line, common separator, or common manifold. Each check valve or other means of shut-off shall be placed in the flow line serving the well so that it will permit the passage of fluids from the well and will act as a check to prevent any fluid from entering the well through the flow line from any outside source.

(b) Operator shall do all things necessary to keep the check valve or other means of shut-off in good working order, and operators, when requested by an agent of the commission, will test the check valve or other means of shut-off for leakage.

Source Note: The provisions of this §3.24 adopted to be effective January 1, 1976.

PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.23	**Vacuum Pumps**

The installation of a vacuum pump or other device for the purpose of putting vacuum on any gas or oil-bearing formation, or the application of any vacuum to any gas or oil-bearing formation is prohibited, except as follows.

(1) If casinghead gas is utilized in a casinghead-gas plant, vacuum may be used, but no more than is sufficient to gather the gas and deliver it at the plant. In no event shall more than two points of vacuum (two inches of mercury) be used at the casinghead.

(2) In a field which is depleted or practically depleted vacuum may be used, but no vacuum pump shall be installed or used without a permit from the commission obtained upon application after notice to adjacent lease owners and operators and a public hearing on such application.

Source Note: The provisions of this §3.23 adopted to be effective January 1, 1976.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.22	**Protection of Birds**

(a) If an operator who maintains a tank or pit does not take protective measures necessary to prevent harm to birds, the operator may incur liability under federal and state wildlife protection laws. Federal statutes, such as the Migratory Bird Treaty Act, provide substantial penalties for the death of certain species of birds due to contact with oil in a tank or pit. These penalties may include imprisonment. State statutes also protect certain species of birds. The Railroad Commission of Texas (commission) is cooperating with federal and state wildlife authorities in their efforts to protect birds.

(b) An operator must screen, net, cover, or otherwise render harmless to birds the following categories of open-top tanks and pits associated with the exploration, development, and production of oil and gas, including transportation of oil and gas by pipeline:

(1) open-top storage tanks that are eight feet or greater in diameter and contain a continuous or frequent surface film or accumulation of oil; however, temporary, portable storage tanks that are used to hold fluids during drilling operations, workovers, or well tests are exempt;

(2) skimming pits as defined in §3.8 of this title (relating to Water Protection) (Statewide Rule 8); and

(3) collecting pits as defined in §3.8 of this title (relating to Water Protection) that are used as skimming pits.

(c) If the commission finds a surface film or accumulation of oil in any other pit regulated under §3.8 of this title (relating to Water Protection), the commission will instruct the operator to remove the oil. If the operator fails to remove the oil from the pit in accordance with the commission's instructions or if the commission finds a surface film or accumulation of oil in the pit again within a 12-month period, the commission will require the operator to screen, net, cover, or otherwise render the pit harmless to birds. Before complying with this requirement, the operator will have a right to a hearing upon request. In addition to the enforcement actions specified by this subsection, the commission may take any other appropriate enforcement actions within its authority.

Source Note: The provisions of this §3.22 adopted to be effective September 1, 1991, 16 TexReg 2523; amended to be effective November 1, 1991, 16 TexReg 4737.

CHAPTER 3	OIL AND GAS DIVISION
RULE §3.21	**Fire Prevention and Swabbing**

(a) No hydrocarbon flow tank, unless entirely buried, shall hereafter be placed nearer than 150 feet from any derrick, rig, building, power plant, or boiler of any description. The director of the Oil and Gas Division or his delegate may administratively grant exceptions to this requirement. If the director of the Oil and Gas Division declines to administratively grant, continue, or extend an exception, the operator shall move the hydrocarbon flow tank to the required distance or request a hearing on the matter. After hearing, the examiner shall recommend final action to the commission.

(b) No field working hydrocarbon tank having a capacity of 10,000 barrels or more shall be built nearer than 200 feet (measured from shell to shell) to any other like tank.

(c) No person engaged in the production, transportation, storage, handling, refining, reclaiming, processing, treating, or marketing of crude petroleum oil or the products or by-products thereof shall store, either permanently or temporarily, crude petroleum oil or the products and by-products thereof in open pits or earthen storage.

(d) All oil tanks where there is a gas hazard shall be gas tight and provided with proper gas vents.

(e) No forge or open light shall be placed inside the derrick of a well showing oil or gas.

(f) Boilers must be equipped with steam lines for fighting fire and must not be set nearer than 150 feet to any producing well.

(g) All wells shall be cleaned into a pit not less than 40 feet from the derrick floor and 150 feet from any fire hazard.

(h) No boiler or electric lighting generator shall be placed or remain nearer than 150 feet to any producing well or oil tank.

(i) Any rubbish or debris that might constitute a fire hazard shall be removed to a distance of at least 150 feet from the vicinity of any well, tank, or pump station. All waste shall be burned or disposed of in such manner as to avoid creating a fire hazard.

(j) Dikes or fire walls shall not be required except such fire walls must be erected and kept around all permanent oil tanks, or battery of tanks, that are within the corporate limits of any city, town, or village; or where such tanks are closer than 500 feet to any highway or inhabited dwelling or closer than 1,000 feet to any school or church; or where such tanks are so located as to be deemed by the commission to be an objectionable hazard.

(k) Swabbing, bailing, or air jetting of wells is prohibited as a production method for wells unless the Commission has, after notice and hearing, granted an exception to this subsection. The Commission shall give notice of the hearing at least 10 days prior to the date of the hearing.

(1) An operator seeking an exception to allow swabbing, bailing, or air jetting of a well shall:

(A) provide the Commission with the names and mailing addresses of the mineral interest owners of record and surface owners of record of the lease on which a well for which an exception is sought is located;

(B) present evidence at the hearing establishing:

(i) the method of production proposed;

(ii) that any production is properly accounted for pursuant to §3.26 of this title (relating to Separating Devices, Tanks, and Surface Commingling of Oil);

(iii) that the proposed exception is necessary to prevent waste or protect correlative rights;

(iv) that wellhead control is sufficient to prevent releases from the well;

(v) that no pollution of usable quality water or safety hazard will result from either the proposed production method or the condition of the well; and

(vi) that the operator possesses a continuing good faith claim to the right to operate the well.

(2) In addition to the information set out in paragraph (1) of this subsection, factors that the Commission may consider in ruling on a request for an exception include:

(A) whether the well has passed a mechanical integrity test within the preceding 12 months;

(B) the estimated monthly and cumulative production from the well if the requested exception is granted;

(C) whether production will be into an on-lease tank battery or a mobile tank;

(D) the adequacy of the financial assurance provided by the operator to assure that the well will be timely and properly plugged;

(E) whether production volume, fine sands in the reservoir, or other factors render pumping of the well impracticable;

(F) whether the reservoir from which the well produces contains hydrogen sulfide; and

(G) the operator's history of compliance with Commission rules.

(3) This section does not prohibit swabbing as a non-recurring method to start initial production, to test or clean out a well, or to restore a well to flowing or pumping status.

Source Note: The provisions of this §3.21 adopted to be effective January 1, 1976, amended to be effective October 3, 1980, 5 TexReg 3794; amended to be effective October 2, 2002, 27 TexReg 9149

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.20	**Notification of Fire Breaks, Leaks, or Blow-outs**

(a) General requirements.

(1) Operators shall give immediate notice of a fire, leak, spill, or break to the appropriate commission district office by telephone or telegraph. Such notice shall be followed by a letter giving the full description of the event, and it shall include the volume of crude oil, gas, geothermal resources, other well liquids, or associated products lost.

(2) All operators of any oil wells, gas wells, geothermal wells, pipelines receiving tanks, storage tanks, or receiving and storage receptacles into which crude oil, gas, or geothermal resources are produced, received, stored, or through which oil, gas, or geothermal resources are piped or transported, shall immediately notify the commission by letter, giving full details concerning all fires which occur at oil wells, gas wells, geothermal wells, tanks, or receptacles owned, operated, or controlled by them or on their property, and all such persons shall immediately report all tanks or receptacles struck by lightning and any other fire which destroys crude oil, natural gas, or geothermal resources, or any of them, and shall immediately report by letter any breaks or leaks in or from tanks or other receptacles and pipelines from which oil, gas, or geothermal resources are escaping or have escaped. In all such reports of fires, breaks, leaks, or escapes, or other accidents of this nature, the location of the well, tank, receptacle, or line break shall be given by county, survey, and property, so that the exact location thereof can be readily located on the ground. Such report shall likewise specify what steps have been taken or are in progress to remedy the situation reported and shall detail the quantity (estimated, if no accurate measurement can be obtained, in which case the report shall show that the same is an estimate) of oil, gas, or geothermal resources, lost, destroyed, or permitted to escape. In case any tank or receptacle is permitted to run over, the escape thus occurring shall be reported as in the case of a leak. (Reference Order Number 20-60,399, effective 9-24-70.)

(b) The report hereby required as to oil losses shall be necessary only in case such oil loss exceeds five barrels in the aggregate.

(c) Any operation with respect to the pickup of pipeline break oil shall be done subject to the following provisions. The provisions hereafter set out shall not apply to the picking up and the returning of pipeline break oil to the pipeline from which it escaped either at the place of the pipeline break, or at the nearest pipeline station to the break where facilities are available to return such oil to the pipeline; provided, that such operations are conducted by the pipeline operator at the time of the pipeline break and its repair; provided, further, that such authority as is herein granted for the picking up of pipeline break oil shall not relieve the operator of such pipeline of notifying the commission of such pipeline break, and the furnishing to the commission of the information required by the provisions set out in subsection (a) of this section for reporting such pipeline breaks.

(1) Any person desiring to pick up, reclaim, or salvage pipeline break oil, other than as provided in this subsection, shall obtain in writing a permit before commencing operations. All applications for permits to pick up, reclaim, or salvage such oil shall be made in writing under oath to the district office.

(2) Applications to pick up, reclaim, or salvage pipeline break oil shall state the location of such oil, the location of the break in the pipeline causing the leakage of such oil, the name of the pipeline, the owner

thereof, and the date of the break.

(3) Pipeline break oil that is not returned to the pipeline from which it escaped shall be offered to the applicant to reclaim by the operator of such pipeline but shall be charged to such pipeline stock account.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.19	**Density of Mud-Fluid**

In cable tool drilling, no operator shall drill into a known oil, gas, or geothermal resource producing formation with water from a higher formation in the hole, or with a sufficient head of water introduced into the hole to prevent gas blowing to the surface. The well shall either be allowed to blow until it has been drilled-in or it shall be drilled under a head of fluid whose weight shall average not less than 9 1/2 pounds per gallon; but in no case shall gas be allowed to blow for a longer period than three days after completion of the well. Mud-laden fluid used for protecting oil, gas, or geothermal resource bearing sands in upper formations while oil, gas, or geothermal resource is being produced from deeper formations shall have an average weight of not less than 91 pounds per gallon.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.17	**Pressure on Bradenhead**

(a) All wells shall be equipped with a Bradenhead. Whenever pressure develops between any two strings of casing, the district office shall be notified immediately. No cement may be pumped between any two strings or pipe at the top of the hole, except after permission has been granted by the district office.

(b) Any well showing pressure on the Bradenhead, or leaking gas, oil, or geothermal resource between the surface and the production or oil string shall be tested in the following manner. The well shall be killed and pump pressure applied through the tubing head. Should the pressure gauge on the Bradenhead reflect the applied pressure, the casing shall be condemned and a new production or oil string shall be run and cemented. This method shall be used when the origin of the pressure cannot be determined otherwise.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.16	**Log and Completion or Plugging Report**

(a) The owner or operator of an oil, gas, or geothermal resource well, within 30 days after the completion of such well or the plugging of such well, if the well is a dry hole, shall file with the commission the appropriate completion or plugging report, and if a basic electric log is run on the well, a legible, unaltered final copy of such a log shall be attached. A basic electric log means a lithology, porosity, or resistivity log run over the entire wellbore or in the alternative, if no such log is run over the entire wellbore, the log which is the most complete of such logs run. Amended completion reports must be filed for any change in perforations, or openhole or casing records within 30 days after recompleting the well. In addition, if the well is deepened, a copy of a basic electric log run after September 1, 1985, should be submitted if such log is run over a deeper interval than the interval covered by a basic electric log already on file with the commission for that wellbore.

(b) Each log filed with the commission shall be considered public information and shall be available to the public during normal business hours. If the owner or operator of such well described in subsection (a) of this section desires log(s) to be confidential, the owner or operator must submit a written request for a delayed filing of the log(s). When filing such a request, the owner or operator must retain the log(s) and may delay filing such log(s) for one year beginning from the date the completion or plugging report is required to be filed with the commission. The owner or operator of such well may request an additional filing delay of two years, provided the written request is filed prior to the expiration date of the initial confidentiality period. If a well is drilled on land submerged in state water, the owner or operator may request an additional filing delay of two years so that a possible total filing delay of five years may be obtained. A request for the additional two year filing delay period must be in writing and be received prior to the expiration of the first two year filing delay. Logs must be filed with the commission within 30 days after the expiration of the final confidentiality period.

(c) If the logs are not filed in accordance with the provisions of this section, the commission may refuse to assign an allowable to a well or may set the allowable for such well at zero. If the well is a dry hole and the logs are not filed in accordance with the provisions of this section, the commission may initiate penalty action pursuant to the Texas Natural Resources Code, Title 3.

Source Note: The provisions of this §3.16 adopted to be effective January 1, 1976; amended to be effective February 20, 1986, 11 TexReg 545.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.14	**Plugging**

(a) Definitions and application to plug.

(1) The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise:

(A) Active operation--Regular and continuing activities related to the production of oil and gas for which the operator has all necessary permits. In the case of a well that has been inactive for 12 consecutive months or longer and that is not permitted as a disposal or injection well, the well remains inactive for purposes of this section, regardless of any minimal activity, until the well has reported production of at least 10 barrels of oil for oil wells or 100 mcf of gas for gas wells each month for at least three consecutive months.

(B) Approved cementer--A cementing company, service company, or operator approved by the Commission to mix and pump cement for the purpose of plugging a well in accordance with the provisions of this section. The term shall also apply to a cementing company, service company, or operator authorized by the Commission to use an alternate material other than cement to plug a well.

(C) Delinquent inactive well--An unplugged well that has had no reported production, disposal, injection, or other permitted activity for a period of greater than 12 months and for which, after notice and opportunity for hearing, the Commission has not extended the plugging deadline.

(D) Funnel viscosity--Viscosity as measured by the Marsh funnel, based on the number of seconds required for 1,000 cubic centimeters of fluid to flow through the funnel.

(E) Good faith claim--A factually supported claim based on a recognized legal theory to a continuing possessory right in a mineral estate, such as evidence of a currently valid oil and gas lease or a recorded deed conveying a fee interest in the mineral estate.

(F) Groundwater conservation district--Any district or authority created under §52, Article III, or §59, Article XVI, Texas Constitution, that has the authority to regulate the spacing of water wells, the production from water wells, or both.

(G) Operator designation form--A certificate of compliance and transportation authority or an application to drill, deepen, recomplete, plug back, or reenter which has been completed, signed and filed with the Commission.

(H) Productive horizon--Any stratum known to contain oil, gas, or geothermal resources in producible quantities in the vicinity of an unplugged well.

(I) Related piping--The surface piping and subsurface piping that is less than three feet beneath the ground surface between pieces of equipment located at any collection or treatment facility. Such piping would include piping between and among headers, manifolds, separators, storage tanks, gun barrels, heater treaters, dehydrators, and any other equipment located at a collection or treatment facility. The term is not intended to refer to lines, such as flowlines, gathering lines, and injection lines that lead up to and away from any such collection or treatment facility.

(J) Reported production--Production of oil or gas, excluding production attributable to well tests, accurately reported to the Commission on a monthly producer's report.

(K) To serve notice on the surface owner or resident--To hand deliver a written notice identifying the well or wells to be plugged and the projected date the well or wells will be plugged to the surface owner, or resident if the owner is absent, at least three days prior to the day of plugging or to mail the notice by first class mail, postage pre-paid, to the last known address of the surface owner or resident at least seven days prior to the day of plugging.

(L) Unbonded operator--An operator that has a current and active organization report on file with the Commission that filed a nonrefundable annual fee as financial security prior to September 1, 2004, and is not required by §3.78 of this title (relating to Fees and Financial Security Requirements) to file an individual performance bond, blanket performance bond, letter of credit, or cash deposit as its financial security until the first date for annual renewal of the operator's organization report after September 1, 2004.

(M) Usable quality water strata--All strata determined by the Texas Commission on Environmental Quality or its successor agencies to contain usable quality water.

(N) Written notice--Notice actually received by the intended recipient in tangible or retrievable form, including notice set out on paper and hand-delivered, facsimile transmissions, and electronic mail transmissions.

(2) The operator shall give the Commission notice of its intention to plug any well or wells drilled for oil, gas, or geothermal resources or for any other purpose over which the Commission has jurisdiction, except those specifically addressed in §3.100(e)(1) of this title (relating to Seismic Holes and Core Holes) (Statewide Rule 100), prior to plugging. The operator shall deliver or transmit the written notice to the district office on the appropriate form.

(3) The operator shall cause the notice of its intention to plug to be delivered to the district office at least five days prior to the beginning of plugging operations. The notice shall set out the proposed plugging procedure as well as the complete casing record. The operator shall not commence the work of plugging the well or wells until the proposed procedure has been approved by the district director or the director's delegate. The operator shall not initiate approved plugging operations before the date set out in the notification for the beginning of plugging operations unless authorized by the district director or the director's delegate. The operator shall notify the district office at least four hours before commencing plugging operations and proceed with the work as approved. The district director or the director's delegate may grant exceptions to the requirements of this paragraph concerning the timing of notices when a workover or drilling rig is already at work on location, and ready to commence plugging operations. Operations shall not be suspended prior to plugging the well unless the hole is cased and casing is cemented in place in compliance with Commission rules. The Commission's approval of a notice of intent to plug and abandon a well shall not relieve an operator of the requirement to comply with subsection (b)(2) of this section, nor does such approval constitute an extension of time to comply with subsection (b)(2) of this section.

(4) The surface owner and the operator may file an application to condition an abandoned well located on the surface owner's tract for usable quality water production operations. The application shall be made on the form prescribed by the Commission, the Application of Landowner to Condition an Abandoned Well for Fresh Water Production.

(A) Standard for Commission Approval. Before the Commission will consider approval of an application:

(i) the surface owner shall assume responsibility for plugging the well and obligate himself, his heirs, successors, and assignees to complete the plugging operations;

(ii) the operator responsible for plugging the well shall place all cement plugs required by this rule up to the base of the usable quality water strata; and

(iii) the surface owner shall submit:

(I) a signed statement attesting to the fact that:

(-a-) there is no groundwater conservation district for the area in which the well is located; or

(-b-) there is a groundwater conservation district for the area where the well is located, but the groundwater conservation district does not require that the well be permitted or registered; or

(-c-) the surface owner has registered the well with the groundwater conservation district for the area where the well is located; or

(II) a copy of the permit from the groundwater conservation district for the area where the well is located.

(B) The duty of the operator to properly plug ends only when:

(i) the operator has properly plugged the well in accordance with Commission requirements up to the base of the usable quality water stratum;

(ii) the surface owner has registered the well with, or has obtained a permit for the well from, the groundwater conservation district, if applicable; and

(iii) the Commission has approved the application of surface owner to condition an abandoned well for fresh water production.

(5) The operator of a well shall serve notice on the surface owner of the well site tract, or the resident if the owner is absent, before the scheduled date for beginning the plugging operations. A representative of the surface owner may be present to witness the plugging of the well. Plugging shall not be delayed because of the lack of actual notice to the surface owner or resident if the operator has served notice as required by this paragraph. The district director or the director's delegate may grant exceptions to the requirements of this paragraph concerning the timing of notices when a workover or drilling rig is already at work on location and ready to commence plugging operations.

(b) Commencement of plugging operations, extensions, and testing.

(1) The operator shall complete and file in the district office a duly verified plugging record, in duplicate, on the appropriate form within 30 days after plugging operations are completed. A cementing report made by the party cementing the well shall be attached to, or made a part of, the plugging report. If the well the operator is plugging is a dry hole, an electric log status report shall be filed with the plugging record.

(2) Plugging operations on each dry or inactive well shall be commenced within a period of one year after drilling or operations cease and shall proceed with due diligence until completed. Plugging operations on delinquent inactive wells shall be commenced immediately unless the well is restored to active operation. For good cause, a reasonable extension of time in which to start the plugging operations may be granted pursuant to the following procedures.

(A) Plugging of inactive wells operated by unbonded operators. During the interim period between September 1, 2004, and the first date for annual renewal of an unbonded operator's organization report after September 1, 2004, the Commission or its delegate may administratively grant an extension of up to one year of the deadline for plugging an inactive well that is operated by an unbonded operator if the following criteria are met:

(i) The well and associated facilities are in compliance with all other laws and Commission rules;

(ii) The operator's organization report is current and active;

(iii) The operator has, and upon request provides evidence of, a good faith claim to a continuing right to operate the well; and

(iv) The operator has tested the well in accordance with the provisions of paragraph (3) of this subsection and files with its application proof of either:

(I) a fluid level test conducted within 90 days prior to the application for a plugging extension demonstrating that any fluid in the wellbore is at least 250 feet below the base of the deepest usable quality water stratum; or,

(II) a hydraulic pressure test conducted during the period the well has been inactive and not more than four years prior to the date of application demonstrating the mechanical integrity of the well.

(B) Plugging of inactive wells operated by bonded operators. An operator that maintains valid, Commission-approved financial security in the form of an individual performance bond, blanket performance bond, letter of credit, or cash deposit as provided in §3.78 of this title (relating to Fees and Financial Security Requirements) (Statewide Rule 78) will be granted a one-year plugging extension for each well it operates that has been inactive for 12 months or more at the time its annual organizational report is approved by the Commission if the following criteria are met:

(i) The well and associated facilities are in compliance with all laws and Commission rules; and,

(ii) The operator has, and upon request provides evidence of, a good faith claim to a continuing right to operate the well.

(C) Revocation or denial of plugging extension.

(i) The Commission or its delegate may revoke a plugging extension if the operator of the well that is the subject of the extension fails to maintain the well and all associated facilities in compliance with Commission rules; fails to maintain a current and accurate organizational report on file with the Commission; fails to provide the Commission, upon request, with evidence of a continuing good faith claim to operate the well; or fails to obtain or maintain financial security as required by §3.78 of this title (relating to Fees and Financial Security Requirements) (Statewide Rule 78).

(ii) If the Commission or its delegate declines to grant or continue a plugging extension or revokes a previously granted extension, the operator shall either return the well to active operation or, within 30 days, plug the well or request a hearing on the matter.

(3) The operator of any well more than 25 years old that becomes inactive and subject to the provisions of this subsection or the operator of any well for which a plugging extension is sought under the terms of subparagraph (A) of paragraph (2) of this subsection shall plug the well or successfully conduct a fluid level or hydraulic pressure test establishing that the well does not pose a potential threat of harm to natural

resources, including surface and subsurface water, oil and gas.

<<Prev Rule Next Rule>>

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.13	**Casing, Cementing, Drilling, and Completion Requirements**

(a) General.

(1) The operator is responsible for compliance with this section during all operations at the well. It is the intent of all provisions of this section that casing be securely anchored in the hole in order to effectively control the well at all times, all usable-quality water zones be isolated and sealed off to effectively prevent contamination or harm, and all potentially productive zones be isolated and sealed off to prevent vertical migration of fluids or gases behind the casing. When the section does not detail specific methods to achieve these objectives, the responsible party shall make every effort to follow the intent of the section, using good engineering practices and the best currently available technology.

(2) Definitions. The following words and terms, when used in this chapter, shall have the following meanings, unless the context clearly indicates otherwise.

(A) Stand under pressure--To leave the hydrostatic column pressure in the well acting as the natural force without adding any external pump pressure. The provisions are complied with if a float collar is used and found to be holding at the completion of the cement job.

(B) Zone of critical cement--For surface casing strings shall be the bottom 20% of the casing string, but shall be no more than 1,000 feet nor less than 300 feet. The zone of critical cement extends to the land surface for surface casing strings of 300 feet or less.

(C) Protection depth--Depth to which usable-quality water must be protected, as determined by the Texas Commission on Environmental Quality (TCEQ) or its successor agencies, which may include zones that contain brackish or saltwater if such zones are correlative and/or hydrologically connected to zones that contain usable-quality water.

(D) Productive horizon--Any stratum known to contain oil, gas, or geothermal resources in commercial quantities in the area.

(b) Onshore and inland waters.

(1) General.

(A) All casing cemented in any well shall be steel casing that has been hydrostatically pressure tested with an applied pressure at least equal to the maximum pressure to which the pipe will be subjected in the well. For new pipe, the mill test pressure may be used to fulfill this requirement. As an alternative to hydrostatic testing, a full length electromagnet, ultrasonic, radiation thickness gauging, or magnetic particle inspection may be employed.

(B) Wellhead assemblies shall be used on wells to maintain surface control of the well. Each component of the wellhead shall have a pressure rating equal to or greater than the anticipated pressure to which that particular component might be exposed during the course of drilling, testing, or producing the well.

(C) A blowout preventer or control head and other connections to keep the well under control at all times shall be installed as soon as surface casing is set. This equipment shall be of such construction and capable of such operation as to satisfy any reasonable test which may be required by the commission or its duly accredited agent.

(D) When cementing any string of casing more than 200 feet long, before drilling the cement plug the operator shall test the casing at a pump pressure in pounds per square inch (psi) calculated by multiplying the length of the casing string by 0.2. The maximum test pressure required, however, unless otherwise ordered by the commission, need not exceed 1,500 psi. If, at the end of 30 minutes, the pressure shows a drop of 10% or more from the original test pressure, the casing shall be condemned until the leak is corrected. A pressure test demonstrating less than a 10% pressure drop after 30 minutes is proof that the condition has been corrected.

(E) Wells drilling to formations where the expected reservoir pressure exceeds the weight of the drilling fluid column shall be equipped to divert any wellbore fluids away from the rig floor. All diverter systems shall be maintained in an effective working condition. No well shall continue drilling operations if a test or other information indicates the diverter system is unable to function or operate as designed.

(2) Surface casing.

(A) Amount required.

(i) An operator shall set and cement sufficient surface casing to protect all usable-quality water strata, as defined by the TCEQ. Before drilling any well in any field or area in which no field rules are in effect or in which surface casing requirements are not specified in the applicable field rules, an operator shall obtain a letter from the TCEQ stating the protection depth. In no case, however, is surface casing to be set deeper than 200 feet below the specified depth without prior approval from the commission.

(ii) Any well drilled to a total depth of 1,000 feet or less below the ground surface may be drilled without setting surface casing provided no shallow gas sands or abnormally high pressures are known to exist at depths shallower than 1,000 feet below the ground surface; and further, provided that production casing is cemented from the shoe to the ground surface by the pump and plug method.

(B) Cementing. Cementing shall be by the pump and plug method. Sufficient cement shall be used to fill the annular space outside the casing from the shoe to the ground surface or to the bottom of the cellar. If cement does not circulate to ground surface or the bottom of the cellar, the operator or his representative shall obtain the approval of the district director for the procedures to be used to perform additional cementing operations, if needed, to cement surface casing from the top of the cement to the ground surface.

(C) Cement quality.

(i) Surface casing strings must be allowed to stand under pressure until the cement has reached a compressive strength of at least 500 psi in the zone of critical cement before drilling plug or initiating a test. The cement mixture in the zone of critical cement shall have a 72-hour compressive strength of at least 1,200 psi.

(ii) An operator may use cement with volume extenders above the zone of critical cement to cement the casing from that point to the ground surface, but in no case shall the cement have a compressive strength of less than 100 psi at the time of drill out nor less than 250 psi 24 hours after being placed.

(iii) In addition to the minimum compressive strength of the cement, the API free water separation shall average no more than six milliliters per 250 milliliters of cement tested in accordance with the current API

RP 10B.

(iv) The commission may require a better quality of cement mixture to be used in any well or any area if evidence of local conditions indicates a better quality of cement is necessary to prevent pollution or to provide safer conditions in the well or area.

(D) Compressive strength tests. Cement mixtures for which published performance data are not available must be tested by the operator or service company. Tests shall be made on representative samples of the basic mixture of cement and additives used, using distilled water or potable tap water for preparing the slurry. The tests must be conducted using the equipment and procedures adopted by the American Petroleum Institute, as published in the current API RP 10B. Test data showing competency of a proposed cement mixture to meet the above requirements must be furnished the commission prior to the cementing operation. To determine that the minimum compressive strength has been obtained, operators shall use the typical performance data for the particular cement used in the well (containing all the additives, including any accelerators used in the slurry) at the following temperatures and at atmospheric pressure.

(i) For the cement in the zone of critical cement, the test temperature shall be within 10 degrees Fahrenheit of the formation equilibrium temperature at the top of the zone of critical cement.

(ii) For the filler cement, the test temperature shall be the temperature found 100 feet below the ground surface level, or 60 degrees Fahrenheit, whichever is greater.

(E) Cementing report. Upon completion of the well, a cementing report must be filed with the commission furnishing complete data concerning the cementing of surface casing in the well as specified on a form furnished by the commission. The operator of the well or his duly authorized agent having personal knowledge of the facts, and representatives of the cementing company performing the cementing job, must sign the form attesting to compliance with the cementing requirements of the commission.

(F) Centralizers. Surface casing shall be centralized at the shoe, above and below a stage collar or diverting tool, if run, and through usable-quality water zones. In nondeviated holes, pipe centralization as follows is required: a centralizer shall be placed every fourth joint from the cement shoe to the ground surface or to the bottom of the cellar. All centralizers shall meet API spec 10D specifications. In deviated holes, the operator shall provide additional centralization.

(G) Alternative surface casing programs.

(i) An alternative method of fresh water protection may be approved upon written application to the appropriate district director. The operator shall state the reason (economics, well control, etc.) for the alternative fresh water protection method and outline the alternate program for casing and cementing through the protection depth for strata containing usable-quality water. Alternative programs for setting more than specified amounts of surface casing for well control purposes may be requested on a field or area basis. Alternative programs for setting less than specified amounts of surface casing will be authorized on an individual well basis only. The district director may approve, modify, or reject the proposed program. If the proposal is modified or rejected, the operator may request a review by the director of field operations. If the proposal is not approved administratively, the operator may request a public hearing. An operator shall obtain approval of any alternative program before commencing operations.

(ii) Any alternate casing program shall require the first string of casing set through the protection depth to be cemented in a manner that will effectively prevent the migration of any fluid to or from any stratum exposed to the wellbore outside this string of casing. The casing shall be cemented from the shoe to ground surface in a single stage, if feasible, or by a multi-stage process with the stage tool set at least 50 feet below the protection depth.

(iii) Any alternate casing program shall include pumping sufficient cement to fill the annular space from the shoe or multi-stage tool to the ground surface. If cement is not circulated to the ground surface or the bottom of the cellar, the operator shall run a temperature survey or cement bond log. The appropriate district office shall be notified prior to running the required temperature survey or bond log. After the top of cement outside the casing is determined, the operator or his representative shall contact the appropriate district director and obtain approval for the procedures to be used to perform any required additional cementing operations. Upon completion of the well, a cementing report shall be filed with the commission on the prescribed form.

(iv) Before parallel (nonconcentric) strings of pipe are cemented in a well, surface or intermediate casing must be set and cemented through the protection depth.

(3) Intermediate casing.

(A) Cementing method. Each intermediate string of casing shall be cemented from the shoe to a point at least 600 feet above the shoe. If any productive horizon is open to the wellbore above the casing shoe, the casing shall be cemented from the shoe up to a point at least 600 feet above the top of the shallowest productive horizon or to a point at least 200 feet above the shoe of the next shallower casing string that was set and cemented in the well.

(B) Alternate method. In the event the distance from the casing shoe to the top of the shallowest productive horizon make cementing, as specified above, impossible or impractical, the multi-stage process may be used to cement the casing in a manner that will effectively seal off all such possible productive horizons and prevent fluid migration to or from such strata within the wellbore.

(4) Production casing.

(A) Cementing method. The producing string of casing shall be cemented by the pump and plug method, or another method approved by the commission, with sufficient cement to fill the annular space back of the casing to the surface or to a point at least 600 feet above the shoe. If any productive horizon is open to the wellbore above the casing shoe, the casing shall be cemented in a manner that effectively seals off all such possibly productive horizons by one of the methods specified for intermediate casing in paragraph (3) of this subsection.

(B) Isolation of associated gas zones. The position of the gas-oil contact shall be determined by coring, electric log, or testing. The producing string shall be landed and cemented below the gas-oil contact, or set completely through and perforated in the oil-saturated portion of the reservoir below the gas-oil contact.

(5) Tubing and storm choke requirements.

(A) Tubing requirements for oil wells. All flowing oil wells shall be equipped with and produced through tubing. When tubing is run inside casing in any flowing oil well, the bottom of the tubing shall be at a point not higher than 100 feet above the top of the producing interval nor more than 50 feet above the top of a line, if one is used. In a multiple zone structure, however, when an operator elects to equip a well in such a manner that small through-the-tubing type tools may be used to perforate, complete, plug back, or recomplete without the necessity of removing the installed tubing, the bottom of the tubing may be set at a distance up to, Cont'd...

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.12	**Directional Survey Company Report**

(a) For each well drilled for oil, gas, or geothermal resources for which a directional survey report is required by rule, regulation, or order, there shall be prepared and filed the following information. The information shall be certified by the person having personal knowledge of the facts, by execution and dating of the data compiled:

(1) name of surveying company;

(2) name of person performing the survey for the company;

(3) the position the person holds with the company;

(4) the date on which the survey was performed;

(5) type of survey conducted and whether multishot;

(6) a complete identification of the well so as to include the name of the operator of the well; the fee owner; the commission lease number, if assigned; the well number; the land survey; the field name; and the county and state;

(7) survey conducted from a depth of ____ feet to ____ feet.

(b) Each directional survey, with its accompanying certification and a certified plat on which the bottom hole location is oriented both to the surface location and to the lease lines (or unit lines in case of pooling) shall be mailed by registered, certified, or overnight mail direct to the commission in Austin by the surveying company making the survey.

Source Note: The provisions of this §3.12 adopted to be effective January 1, 1976; amended to be effective August 25, 2003, 28 TexReg 6816

Next Rule>>

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.11	**Inclination and Directional Surveys Required**

(a) General. All wells shall be drilled as nearly vertical as possible by normal, prudent, practical drilling operations. Nothing in this section shall be construed to permit the drilling of any well in such a manner that the wellbore crosses lease and/or property lines (or unit lines in cases of pooling) without special permission.

(b) Inclination surveys.

(1) Requirements.

(A) An inclination survey made by persons or concerns approved by the commission shall be filed on a form prescribed by the commission for each well drilled or deepened with rotary tools, except as hereinafter provided, or when, as a result of any operation, the course of the well is changed. The first shot point of such inclination survey shall be made at a depth not greater than 500 feet below the surface of the ground, and succeeding shot points shall be made either at 500-foot intervals or at the nearest drill bit change thereto, but not to exceed 1,000 feet apart.

(B) Inclination surveys conforming to these requirements may be made either during the normal course of drilling or after the well has reached total depth. Acceptable directional surveys may be filed in lieu of inclination surveys.

(C) Copies of all directional or inclination surveys, regardless of the reason for which they are run, shall be filed as a part of or in addition to the inclination surveys otherwise required by this section. If computations are made from dipmeter surveys to determine the course of the wellbore in any portion of the surveyed interval, a report of such computations shall be required.

(D) Inclination surveys shall not be required in any well drilled to a total depth of 2,000 feet or less on a regular location at least 150 feet from the nearest lease line, provided the well is not intentionally deviated from the vertical in any manner whatsoever.

(E) Inclination surveys shall not be required on wells deepened with rotary tools if the well is deepened no more than 300 feet or the distance from the surface location to the nearest lease or boundary line, whichever is the lesser, and provided that the well was not intentionally deviated from the vertical at any time before or after the beginning of deepening operations.

(F) Inclination surveys will not be required on wells that are drilled and completed as dry holes and are permanently plugged and abandoned. If such wells are reentered at a later date and completed as producers or injection or disposal wells, inclination reports will be required and must be filed with the appropriate completion form for the well.

(G) Inclination survey filings will not be required on wells that are reentries within casing of previously producing wells if inclination data are already on file with the Railroad Commission of Texas (commission). If such data are not on file with the commission, the results of an inclination survey must be reported on the appropriate form and filed with the completion form, except as provided by subparagraph (D) of this paragraph.

(2) Reports.

(A) The report form shall be signed and certified by a party having personal knowledge of the facts therein contained. The report shall include a tabulation of the maximum drifts which could occur between the surface and the first shot point, and each two successive shot points, assuming that all of the unsurveyed hole between any two shot points has the same inclination as that measured at the lowest shot point, and the total possible accumulative drift, assuming that all measured angles of inclination are in the same direction.

(B) In addition, the report shall be accompanied by a certified statement of the operator, or of someone acting at his direction on his behalf, either:

(i) that the well was not intentionally deviated from vertical; or

(ii) that the well was deviated at random, with an explanation of the circumstances.

(C) The report shall be filed in the district office by attaching one copy to each appropriate completion form for the well.

(D) The commission may require the submittal of the original charts, graphs, or discs resulting from the surveys.

(c) Directional surveys.

(1) When required.

(A) When the maximum displacement indicated by an inclination survey is greater than the actual distance from the surface location to the nearest lease line or pooled unit boundary, it will be considered to be a violating well subject to plugging and to penalty action. However, an operator may submit a directional survey, run at his own expense by a commission approved surveying company, to show the true bottom hole location of the well to be within the prescribed limits. When such directional survey shows the well to be bottomed within the confines of the lease, but nearer to a well or lease line or pooled unit boundary than allowed by applicable rules, or by the permit for the well if the well has been granted an exception to §3.37 of this title (relating to Statewide Spacing Rule), a new permit will be required if it is established that the bottom hole location or completion location is not a reasonable location.

(B) Directional surveys shall be required on each well drilled under the directional deviation provisions of this section.

(C) No oil, gas, or geothermal resource allowable shall be assigned any well on which a directional survey is required under any provision of this section until a directional survey has been filed with and accepted by the commission.

(2) Filing and type of survey.

(A) Directional surveys required under this section must be run by competent surveying companies, approved by the commission, signed and certified by a person having actual knowledge of the facts, in the manner prescribed by the commission in accordance with §3.12 of this title (relating to Directional Survey Company Report).

(B) All directional surveys, unless otherwise specified by the commission, shall be either single shot surveys or multi-shot surveys with the shot points not more than 200 feet apart, beginning within 200 feet of the surface, and the bottom hole location must be oriented both to the surface location and to the lease lines (or unit lines in cases of pooling).

(C) If more than 200 feet of surface casing has been run, the operator may begin the directional survey immediately below the surface casing depth. However, if such method is used, the inclination drifts from the surface of the ground to the surface casing depth must be added cumulatively and reported on the appropriate form. This total shall be assumed to be in the direction least favorable to the operator, and such point shall be considered the starting point of the directional survey.

(d) Intentional deviation of wells.

(1) Definitions.

(A) Directional deviation--The intentional deviation of a well from vertical in a predetermined compass direction.

(B) Random deviation--The intentional deviation of a well without regard to compass direction for one of the following reasons:

(i) to straighten a hole which has become crooked in the normal course of drilling;

(ii) to sidetrack a portion of a hole because of mechanical difficulty in drilling.

(2) When permitted.

(A) Directional deviation. A permit for directionally deviating a well may be granted by the commission:

(i) for the purpose of seeking to reach and control another well which is out of control or threatens to evade control;

(ii) where conditions on the surface of the ground prevent or unduly complicate the drilling of a well at a regular location;

(iii) where conditions are encountered underground which prevent or unduly hinder the normal completion of the well;

(iv) where it can be shown to be advantageous from the standpoint of mechanical operation to drill more than one well from the same surface location to reach the productive horizon at essentially the same positions as would be reached if the several wells were normally drilled from regular locations prescribed by the well spacing rules in effect;

(v) for the purpose of drilling a horizontal drainhole; or

(vi) for other reasons found by the commission to be sufficient after notice and hearing.

(B) Random deviation. Permission for the random deviation of a well may be granted by the commission whenever the necessity for such deviation is shown, as prescribed in paragraph (3)(C) of this subsection.

(3) Applications for deviation.

(A) Applications for wells to be directionally deviated must specify on the application to drill both the surface location of the well and the projected bottom hole location of the well. On the plat, in addition to the plat requirements provided for in §3.5 of this title (relating to Application to Drill, Deepen, Reenter, or Plug

Back) (Statewide Rule 5), the following shall be included:

(i) two perpendicular lines providing the distance in feet from the projected bottomhole location, rather than the surface location, to the nearest points on the lease, pooled unit, or unitized tract line. If there is an unleased interest in a tract of the pooled unit or unitized tract that is nearer than the pooled unit or unitized tract line, the nearest point on that unleased tract boundary shall be used;

(ii) a line providing the distance in feet from the projected bottomhole location to the nearest point on the lease line, pooled unit line, or unitized tract line. If there is an unleased interest in a tract of the pooled unit that is nearer than the pooled unit line, the nearest point on that unleased tract boundary shall be used;

(iii) a line providing the distance in feet from the projected bottomhole location, rather than the surface location, to the nearest oil, gas, or oil and gas well, identified by number, applied for, permitted, or completed in the same lease, pooled unit, or unitized tract and in the same field and reservoir; and

(iv) perpendicular lines providing the distance in feet from the two nearest non-parallel survey/section lines to the projected bottomhole location.

(B) If the necessity for directional deviation arises unexpectedly after drilling has begun, the operator shall give written notice by letter or telegram of such necessity to the appropriate district office and to the commission office in Austin, and upon giving such notice, the operator may proceed with the directional deviation. The commission may, at its discretion, accept written notice electronically transmitted. If the operator proceeds with the drilling of a deviated well under such circumstances, he proceeds at his own risk. Before any allowable shall be assigned to such well, a permit for the subsurface location of each completion interval shall be obtained from the commission under the provisions set out in the commission rules. However, should the operator fail to show good and sufficient cause for such deviation, no permit will be granted for the well.

(C) If the necessity for random deviation arises unexpectedly after the drilling has begun, the operator shall give written notice by letter or telegram of such necessity to the appropriate district office and to the commission office in Austin, and, upon giving such notice, the operator may proceed with the random deviation, subject to compliance with the provisions of this section on inclination surveys. The commission may, at its discretion, accept written notice electronically transmitted.

(e) Surveys on request of other operators. The commission, at the written request of any operator in a field, shall determine whether a directional survey, an inclination survey, or any other type of survey approved by the commission for the purpose of determining bottom hole location of wells, shall be made in regard to a well complained of in the same field.

(1) The complaining party must show probable cause to suspect that the well complained of is not bottomed within its own lease lines.

(2) The complaining party must agree to pay all costs and expenses of such survey, shall assume all liability, and shall be required to post bond in a sufficient sum as determined by the commission as security against all costs and risks associated with the survey.

(3) The complaining party and the commission shall agree upon the selection of the well surveying company to conduct the survey, which shall be a surveying company on the commission's approved list.

(4) The survey shall be witnessed by the commission, and may be witnessed by any party, or his agent, who has an interest in the field.

(5) Nothing in these rules shall be construed to prevent or limit the commission, acting on its own authority, from conducting spot checks and surveys at any time and place for the purpose of determining compliance with the commission rules and regulations.

(f) Penalties.

(1) False reports. The filing of a false or incorrect directional survey shall be grounds for cancellation of the well permit, for pipeline severance of the lease on which the well is located, for penalty action under the applicable statutes, and/or for such other and further action as may be appropriate.

(2) Other. The same penalties and actions as set forth in paragraph (1) of this subsection shall be assessable against any operator who refuses to comply with a commission order which issues under subsection (e) of this section.

Source Note: The provisions of this §3.11 adopted to be effective January 1, 1976; amended to be effective July 4, 1979, 4 TexReg 2197; amended to be effective March 10, 1986, 11 TexReg 901; amended to be effective May 23, 1990, 15 TexReg 2634; amended to be effective June 11, 2001, 26 TexReg 4088

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.10	**Restriction of Production of Oil and Gas from Different Strata**

(a) General prohibition. Oil or gas shall not be produced from different strata through the same string of tubulars except as provided in this section. As used in this section, "different strata" means two or more different commission-designated fields, or one or more commission-designated fields and any other hydrocarbon reservoir.

(b) Exception. After notice and an opportunity for a hearing, the commission or its delegate may grant an exception to subsection (a) of this section to permit production from a well or wells commingling oil or gas or oil and gas from different strata, if commingled production will prevent waste or promote conservation or protect correlative rights.

(c) Notice of Application for Exception.

(1) Timing of Notice.

(A) The applicant shall give notice of each request for an exception by serving a copy of the application to commingle production on all affected operators at the same time the application is filed with the commission.

(B) Service shall be accomplished by delivering a copy of the application to the operator to be served, or to the operator's duly authorized representative, in person, by agent, by courier receipted delivery, by first class mail to the operator's mailing address as shown on the operator's most recently filed Form P-5 (Organization Report) or the most recently filed letter notification of change of address, or by such other manner as the commission may direct.

(2) Operators Presumptively Affected By Application.

(A) An initial exception to commingle production exclusively from different commission-designated fields is presumed to affect all operators in each of the commission-designated fields proposed to be produced through the same string of tubulars.

(B) An initial exception to commingle production from a commission-designated field with production from one or more hydrocarbon reservoirs that have not been designated by the commission as a field is presumed to affect all operators in each of the different commission-designated fields proposed to be produced through the same string of tubulars and all operators of adjacent tracts, and of tracts nearer to the well for which a commingling exception is sought than the longest applicable minimum lease-line distance.

(C) An exception to commingle production exclusively from the same commission-designated fields for which an initial commingling application has previously been granted is presumed to affect all operators of adjacent tracts, and of tracts nearer to the well for which a subsequent commingling exception is sought than the longest applicable minimum lease-line distance, who have a well completed in one or more of the commission-designated fields for which commingling is sought.

(D) An exception to commingle production from a commission-designated field and one or more hydrocarbon reservoirs in specified correlative intervals that have not been designated by the commission as fields, for which an initial commingling exception involving the same fields and hydrocarbon reservoirs has previously been granted, is presumed to affect all operators of adjacent tracts, and of tracts nearer to the well for which a commingling exception is sought than the longest applicable minimum lease-line distance.

(3) Notice Required Only to Affected Operators.

(A) Except as provided in subparagraph (B) of this paragraph, all operators described in paragraph (2)(A)-(D) of this subsection are affected by a requested exception to allow commingling and the applicant shall give each of them notice of the application as provided in paragraph (1)(A) of this subsection.

(B) The commission or its delegate may determine that an operator described in paragraph (2)(A)-(D) will be unaffected by a requested exception to allow commingling. This determination shall be made only upon the applicant's written request and provision to the commission of competent geological or engineering data establishing conclusively that commingling production as requested by the applicant will not physically interfere with the production of hydrocarbons by the operator for which an unaffected determination is requested. An applicant for an exception to allow commingling is not required to give notice of the application to an operator who has been determined to be unaffected as provided in this subparagraph.

(d) Commingled production. Commingled production of gas from different strata pursuant to subsection (b) of this section shall be considered production from a common source of supply for purposes of proration and allocation.

Source Note: The provisions of this §3.10 adopted to be effective January 1, 1976; amended to be effective February 23, 1979, 4 TexReg 436; amended to be effective September 12, 1979, 4 TexReg 3082; amended to be effective May 14, 1996, 21 TexReg 3791.

<<Prev Rule

Texas Administrative Code

Next Rule>>

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.9	**Disposal Wells**

Any person who disposes of saltwater or other oil and gas waste by injection into a porous formation not productive of oil, gas, or geothermal resources shall be responsible for complying with this section, Texas Water Code, Chapter 27, and Title 3 of the Natural Resources Code.

(1) General. Saltwater or other oil and gas waste, as that term is defined in the Texas Water Code, Chapter 27, may be disposed of, upon application to and approval by the commission, by injection into nonproducing zones of oil, gas, or geothermal resources bearing formations that contain water mineralized by processes of nature to such a degree that the water is unfit for domestic, stock, irrigation, or other general uses. Every applicant who proposes to dispose of saltwater or other oil and gas waste into a formation not productive of oil, gas, or geothermal resources must obtain a permit from the commission authorizing the disposal in accordance with this section. Permits from the commission issued before the effective date of this section shall continue in effect until revoked, modified, or suspended by the commission.

(2) Geological requirements. Before such formations are approved for disposal use, the applicant shall show that the formations are separated from freshwater formations by impervious beds which will give adequate protection to such freshwater formations. The applicant must submit a letter from the Texas Commission on Environmental Quality or its successor agencies stating that the use of such formation will not endanger the freshwater strata in that area and that the formations to be used for disposal are not freshwater-bearing.

(3) Application. The application to dispose of saltwater or other oil and gas waste by injection into a porous formation not productive of oil, gas, or geothermal resources shall be filed with the commission in Austin accompanied by the prescribed fee. On the same date, one copy shall be filed with the appropriate district office.

(4) Commercial disposal well. An applicant for a permit to dispose of oil and gas waste in a commercial disposal well shall clearly indicate on the application and in the published notice of application that the application is for a commercial disposal well permit. For the purposes of this rule, "commercial disposal well" means a well whose owner or operator receives compensation from others for the disposal of oil field fluids or oil and gas wastes that are wholly or partially trucked or hauled to the well, and the primary business purpose for the well is to provide these services for compensation.

(5) Notice and opportunity for hearing.

(A) The applicant shall give notice by mailing or delivering a copy of the application to affected persons who include the owner of record of the surface tract on which the well is located; each commission-designated operator of any well located within one-half mile of the proposed disposal well; the county clerk of the county in which the well is located; and the city clerk or other appropriate city official of any city where the well is located within the municipal boundaries of the city, on or before the date the application is mailed to or filed with the commission. For the purposes of this section, the term "of record" means recorded in the real property or probate records of the county in which the property is located.

(B) In addition to the requirements of subsection (a)(5)(A) of this section, a commercial disposal well permit applicant shall give notice to owners of record of each surface tract that adjoins the proposed disposal tract by mailing or delivering a copy of the application to each such surface owner.

(C) If, in connection with a particular application, the commission or its delegate determines that another class of persons should receive notice of the application, the commission or its delegate may require the applicant to mail or deliver a copy of the application to members of that class. Such classes of persons could include adjacent surface owners or underground water districts.

(D) In order to give notice to other local governments, interested, or affected persons, notice of the application shall be published once by the applicant in a newspaper of general circulation for the county where the well will be located in a form approved by the commission or its delegate. The applicant shall file with the commission in Austin proof of publication prior to the hearing or administrative approval.

(E) Protested applications:

(i) If a protest from an affected person or local government is made to the commission within 15 days of receipt of the application or of publication, whichever is later, or if the commission or its delegate determines that a hearing is in the public interest, then a hearing will be held on the application after the commission provides notice of hearing to all affected persons, local governments, or other persons, who express an interest, in writing, in the application.

(ii) For purposes of this section, "affected person" means a person who has suffered or will suffer actual injury or economic damage other than as a member of the general public or as a competitor, and includes surface owners of property on which the well is located and commission-designated operators of wells located within one-half mile of the proposed disposal well.

(F) If no protest from an affected person is received by the commission, the commission's delegate may administratively approve the application. If the commission's delegate denies administrative approval, the applicant shall have a right to a hearing upon request. After hearing, the examiner shall recommend a final action by the commission.

(6) Subsequent commission action.

(A) A permit for saltwater or other oil and gas waste disposal may be modified, suspended, or terminated by the commission for just cause after notice and opportunity for hearing, if:

(i) a material change of conditions occurs in the operation or completion of the disposal well, or there are material changes in the information originally furnished;

(ii) freshwater is likely to be polluted as a result of continued operation of the well;

(iii) there are substantial violations of the terms and provisions of the permit or of commission rules;

(iv) the applicant has misrepresented any material facts during the permit issuance process;

(v) injected fluids are escaping from the permitted disposal zone; or

(vi) waste of oil, gas, or geothermal resources is occurring or is likely to occur as a result of the permitted operations.

(B) A disposal well permit may be transferred from one operator to another operator provided that the commission's delegate does not notify the present permit holder of an objection to the transfer prior to the date the lease is transferred on Commission records.

(C) Voluntary permit suspension.

(i) An operator may apply to temporarily suspend its injection authority by filing a written request for permit suspension with the commission in Austin, and attaching to the written request the results of an MIT test performed during the previous three-month period in accordance with the provisions of paragraph (12)(D) of this section. The provisions of this subparagraph shall not apply to any well that is permitted as a commercial disposal well.

(ii) The commission or its delegate may grant the permit suspension upon determining that the results of the MIT test submitted under clause (i) of this subparagraph indicate that the well meets the performance standards of paragraph (12)(D) of this section.

(iii) During the period of permit suspension, the operator shall not use the well for injection or disposal purposes.

(iv) During the period of permit suspension, the operator shall comply with all applicable well testing requirements of §3.14 of this title (relating to plugging, and commonly referred to as Statewide Rule 14) but need not perform the MIT test that would otherwise be required under the provisions of paragraph (12)(D) of this section or the permit. Further, during the period of permit suspension, the provisions of paragraph (11)(A) - (C) of this section shall not apply.

(v) The operator may reinstate injection authority under a suspended permit by filing a written notification with the commission in Austin. The written notification shall be accompanied by an MIT test performed during the three-month period prior to the date notice of reinstatement is filed. The MIT test shall have been performed in accordance with the provisions and standards of paragraph (12)(D) of this section.

(7) Area of Review.

(A) Except as otherwise provided in this paragraph, the applicant shall review the date of public record for wells that penetrate the proposed disposal zone within a 1/4 mile radius of the proposed disposal well to determine if all abandoned wells have been plugged in a manner that will prevent the movement of fluids from the disposal zone into freshwater strata. The applicant shall identify in the application any wells which appear from such review of public records to be unplugged or improperly plugged and any other unplugged or improperly plugged wells of which the applicant has actual knowledge.

(B) The commission or its delegate may grant a variance from the area-of-review requirements of subparagraph (A) of this paragraph upon proof that the variance will not result in a material increase in the risk of fluid movement into freshwater strata or to the surface. Such a variance may be granted for an area defined both vertically and laterally (such as a field) or for an individual well. An application for an areal variance need not be filed in conjunction with an individual permit application or application for permit amendment. Factors that may be considered by the commission or its delegate in granting a variance include:

(i) the area affected by pressure increases resulting from injection operations;

(ii) the presence of local geological conditions that preclude movement of fluid that could endanger freshwater strata or the surface; or

(iii) other compelling evidence that the variance will not result in a material increase in the risk of fluid movement into freshwater strata or to the surface.

(C) Persons applying for a variance from the area-of-review requirements of subparagraph (A) of this paragraph on the basis of factors set out in subparagraph (B)(ii) or (iii) of this paragraph for an individual well shall provide notice of the application to those persons given notice under the provisions of paragraph (5)(A) of this subsection. The provisions of paragraph (5)(D) and (E) shall apply in the case of an application for a variance from the area-of-review requirements for an individual well.

(D) Notice of an application for an areal variance from the area-of-review requirements under subparagraph (A) of this paragraph shall be given on or before the date the application is filed with the commission:

(i) by publication once in a newspaper having general circulation in each county, or portion thereof, where the variance would apply. Such notice shall be in a form approved by the commission or its delegate prior to publication and must be at least three inches by five inches in size. The notice shall state that protests to the application may be filed with the commission during the 15-day period following the date of publication. The notice shall appear in a section of the newspaper containing state or local news items;

(ii) by mailing or delivering a copy of the application, along with a statement that any protest to the application should be filed with the commission within 15 days of the date of the application is filed with the commission, to the following:

(I) the manager of each underground water conservation district(s) in which the variance would apply, if any;

(II) the city clerk or other appropriate official of each incorporated city in which the variance would apply, if any;

(III) the county clerk of each county in which the variance would apply; and

(IV) any other person or persons that the commission or its delegate determine should receive notice of the application.

(E) If a protest to an application for an areal variance is made to the commission by an affected person, local government, underground water conservation district, or other state agency within 15 days of receipt of the application or of publication, whichever is later, or if the commission's delegate determines that a hearing on the application is in the public interest, then a hearing will be held on the application after the commission provides notice of the hearing to all local governments, underground water conservation districts, state agencies, or other persons, who express an interest, in writing, in the application. If no protest from an affected person is received by the commission, the commission's delegate may administratively approve the application. If the application is denied administratively, the person(s) filing the application shall have a right to hearing upon request. After hearing, the examiner shall recommend a final action by the commission.

(F) An areal variance granted under the provisions of this paragraph may be modified, terminated, or suspended by the commission after notice and opportunity for hearing is provided to each person shown on commission records to operate an oil or gas lease in the area in which the proposed modification, termination, or suspension would apply. If a hearing on a proposal to modify, terminate, or suspend an areal variance is held, any applications filed subsequent to the date notice of hearing is given must include the area-of-review information required under subparagraph (A) of this paragraph pending issuance of a final order.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.8	**Water Protection**

(a) The following words and terms when used in this section shall have the following meanings, unless the context clearly indicates otherwise.

(1) Basic sediment pit--Pit used in conjunction with a tank battery for storage of basic sediment removed from a production vessel or from the bottom of an oil storage tank. Basic sediment pits were formerly referred to as burn pits.

(2) Brine pit--Pit used for storage of brine which is used to displace hydrocarbons from an underground hydrocarbon storage facility.

(3) Collecting pit--Pit used for storage of saltwater prior to disposal at a tidal disposal facility, or pit used for storage of saltwater or other oil and gas wastes prior to disposal at a disposal well or fluid injection well. In some cases, one pit is both a collecting pit and a skimming pit.

(4) Completion/workover pit--Pit used for storage or disposal of spent completion fluids, workover fluids and drilling fluid, silt, debris, water, brine, oil scum, paraffin, or other materials which have been cleaned out of the wellbore of a well being completed or worked over.

(5) Drilling fluid disposal pit--Pit, other than a reserve pit, used for disposal of spent drilling fluid.

(6) Drilling fluid storage pit--Pit used for storage of drilling fluid which is not currently being used but which will be used in future drilling operations. Drilling fluid storage pits are often centrally located among several leases.

(7) Emergency saltwater storage pit--Pit used for storage of produced saltwater for limited period of time. Use of the pit is necessitated by a temporary shutdown of disposal well or fluid injection well and/or associated equipment, by temporary overflow of saltwater storage tanks on a producing lease or by a producing well loading up with formation fluids such that the well may die. Emergency saltwater storage pits may sometimes be referred to as emergency pits or blowdown pits.

(8) Flare pit--Pit which contains a flare and which is used for temporary storage of liquid hydrocarbons which are sent to the flare during equipment malfunction but which are not burned. A flare pit is used in conjunction with a gasoline plant, natural gas processing plant, pressure maintenance or repressurizing plant, tank battery, or a well.

(9) Fresh makeup water pit--Pit used in conjunction with drilling rig for storage of water used to make up drilling fluid.

(10) Gas plant evaporation/retention pit--Pit used for storage or disposal of cooling tower blowdown, water condensed from natural gas, and other wastewater generated at gasoline plants, natural gas processing plants, or pressure maintenance or repressurizing plants.

(11) Mud circulation pit--Pit used in conjunction with drilling rig for storage of drilling fluid currently

being used in drilling operations.

(12) Reserve pit--Pit used in conjunction with drilling rig for collecting spent drilling fluids; cuttings, sands, and silts; and wash water used for cleaning drill pipe and other equipment at the well site. Reserve pits are sometimes referred to as slush pits or mud pits.

(13) Saltwater disposal pit--Pit used for disposal of produced saltwater.

(14) Skimming pit--Pit used for skimming oil off saltwater prior to disposal of saltwater at a tidal disposal facility, disposal well, or fluid injection well.

(15) Washout pit--Pit located at a truck yard, tank yard, or disposal facility for storage or disposal of oil and gas waste residue washed out of trucks, mobile tanks, or skid-mounted tanks.

(16) Water condensate pit--Pit used in conjunction with a gas pipeline drip or gas compressor station for storage or disposal of fresh water condensed from natural gas.

(17) Generator--Person who generates oil and gas wastes.

(18) Carrier--Person who transports oil and gas wastes generated by a generator. A carrier of another person's oil and gas wastes may be a generator of his own oil and gas wastes.

(19) Receiver--Person who stores, handles, treats, reclaims, or disposes of oil and gas wastes generated by a generator. A receiver of another person's oil and gas wastes may be a generator of his own oil and gas wastes.

(20) Director--Director of the Oil and Gas Division or his staff delegate designated in writing by the director of the Oil and Gas Division or the commission.

(21) Person--Natural person, corporation, organization, government or governmental subdivision or agency, business trust, estate, trust, partnership, association, or any other legal entity.

(22) Affected person--Person who, as a result of the activity sought to be permitted, has suffered or may suffer actual injury or economic damage other than as a member of the general public.

(23) To dewater--To remove the free water.

(24) To dispose--To engage in any act of disposal subject to regulation by the commission including, but not limited to, conducting, draining, discharging, emitting, throwing, releasing, depositing, burying, landfarming, or allowing to seep, or to cause or allow any such act of disposal.

(25) Landfarming--A waste management practice in which oil and gas wastes are mixed with or applied to the land surface in such a manner that the waste will not migrate off the landfarmed area.

(26) Oil and gas wastes--Materials to be disposed of or reclaimed which have been generated in connection with activities associated with the exploration, development, and production of oil or gas or geothermal resources, as those activities are defined in paragraph (30) of this subsection, and materials to be disposed of or reclaimed which have been generated in connection with activities associated with the solution mining of brine. The term "oil and gas wastes" includes, but is not limited to, saltwater, other mineralized water, sludge, spent drilling fluids, cuttings, waste oil, spent completion fluids, and other liquid, semiliquid, or solid waste material. The term "oil and gas wastes" includes waste generated in connection with activities associated with gasoline plants, natural gas or natural gas liquids processing plants, pressure maintenance plants, or repressurizing plants unless that waste is a hazardous waste as defined by the administrator of the

United States Environmental Protection Agency pursuant to the federal Solid Waste Disposal Act, as amended (42 United States Code §6901 et seq.).

(27) Oil field fluids--Fluids to be used or reused in connection with activities associated with the exploration, development, and production of oil or gas or geothermal resources, fluids to be used or reused in connection with activities associated with the solution mining of brine, and mined brine. The term "oil field fluids" includes, but is not limited to, drilling fluids, completion fluids, surfactants, and chemicals used to detoxify oil and gas wastes.

(28) Pollution of surface or subsurface water--The alteration of the physical, thermal, chemical, or biological quality of, or the contamination of, any surface or subsurface water in the state that renders the water harmful, detrimental, or injurious to humans, animal life, vegetation, or property, or to public health, safety, or welfare, or impairs the usefulness or the public enjoyment of the water for any lawful or reasonable purpose.

(29) Surface or subsurface water--Groundwater, percolating or otherwise, and lakes, bays, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Gulf of Mexico inside the territorial limits of the state, and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, navigable or nonnavigable, and including the beds and banks of all watercourses and bodies of surface water, that are wholly or partially inside or bordering the state or inside the jurisdiction of the state.

(30) Activities associated with the exploration, development, and production of oil or gas or geothermal resources--Activities associated with:

(A) the drilling of exploratory wells, oil wells, gas wells, or geothermal resource wells;

(B) the production of oil or gas or geothermal resources, including:

(i) activities associated with the drilling of injection water source wells that penetrate the base of usable quality water;

(ii) activities associated with the drilling of cathodic protection holes associated with the cathodic protection of wells and pipelines subject to the jurisdiction of the commission to regulate the production of oil or gas or geothermal resources;

(iii) activities associated with gasoline plants, natural gas or natural gas liquids processing plants, pressure maintenance plants, or repressurizing plants;

(iv) activities associated with any underground natural gas storage facility, provided the terms "natural gas" and "storage facility" shall have the meanings set out in the Texas Natural Resources Code, §91.173;

(v) activities associated with any underground hydrocarbon storage facility, provided the terms "hydrocarbons" and "underground hydrocarbon storage facility" shall have the meanings set out in the Texas Natural Resources Code, §91.201; and

(vi) activities associated with the storage, handling, reclamation, gathering, transportation, or distribution of oil or gas prior to the refining of such oil or prior to the use of such gas in any manufacturing process or as a residential or industrial fuel;

(C) the operation, abandonment, and proper plugging of wells subject to the jurisdiction of the commission to regulate the exploration, development, and production of oil or gas or geothermal resources;

and

(D) the discharge, storage, handling, transportation, reclamation, or disposal of waste or any other substance or material associated with any activity listed in subparagraphs (A)-(C) of this paragraph, except for waste generated in connection with activities associated with gasoline plants, natural gas or natural gas liquids processing plants, pressure maintenance plants, or repressurizing plants if that waste is a hazardous waste as defined by the administrator of the United States Environmental Protection Agency pursuant to the federal Solid Waste Disposal Act, as amended (42 United States Code §6901, et seq.).

(31) Mined brine--Brine produced from a brine mining injection well by solution of subsurface salt formations. The term "mined brine" does not include saltwater produced incidentally to the exploration, development, and production of oil or gas or geothermal resources.

(32) Brine mining pit--Pit, other than a fresh mining water pit, used in connection with activities associated with the solution mining of brine. Most brine mining pits are used to store mined brine.

(33) Fresh mining water pit--Pit used in conjunction with a brine mining injection well for storage of water used for solution mining of brine.

(34) Inert wastes--Nonreactive, nontoxic, and essentially insoluble oil and gas wastes, including, but not limited to, concrete, glass, wood, metal, wire, plastic, fiberglass, and trash.

(35) Coastal zone--The area within the boundary established in Title 31, Texas Administrative Code, §503.1 (Coastal Management Program Boundary).

(36) Coastal management program (CMP) rules--The enforceable rules of the Texas Coastal Management Program codified at Title 31, Texas Administrative Code, Chapters 501, 505, and 506.

(37) Coastal natural resource area (CNRA)--One of the following areas defined in Texas Natural Resources Code, §33.203: coastal barriers, coastal historic areas, coastal preserves, coastal shore areas, coastal wetlands, critical dune areas, critical erosion areas, gulf beaches, hard substrate reefs, oyster reefs, submerged land, special hazard areas, submerged aquatic vegetation, tidal sand or mud flats, water in the open Gulf of Mexico, and water under tidal influence.

(38) Coastal waters--Waters under tidal influence and waters of the open Gulf of Mexico.

(39) Critical area--A coastal wetland, an oyster reef, a hard substrate reef, submerged aquatic vegetation, or a tidal sand or mud flat as defined in Texas Natural Resources Code, §33.203.

(40) Practicable--Available and capable of being done after taking into consideration existing technology, cost, and logistics in light of the overall purpose of the activity.

(b) No pollution. No person conducting activities subject to regulation by the commission may cause or allow pollution of surface or subsurface water in the state.

(c) Exploratory wells. Any oil, gas, or geothermal resource well or well drilled for exploratory purposes shall be governed by the provisions of statewide or field rules which are applicable and pertain to the drilling, safety, casing, production, abandoning, and plugging of wells.

(d) Pollution control.

(1) Prohibited disposal methods. Except for those disposal methods authorized for certain wastes by paragraph (3) of this subsection, subsection (e) of this section, or §3.98 of this title (relating to Standards for

Management of Hazardous Oil and Gas Waste), or disposal methods required to be permitted pursuant to §3.9 of this title (relating to Disposal Wells) (Rule 9) or §3.46 of this title (relating to Fluid Injection into Productive Reservoirs) (Rule 46), no person may dispose of any oil and gas wastes by any method without obtaining a permit to dispose of such wastes. The disposal methods prohibited by this paragraph include, but are not limited to, the unpermitted discharge of oil field brines, geothermal resource waters, or other mineralized waters, or drilling fluids into any watercourse or drainageway, including any drainage Cont'd...

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.7	**Strata To Be Sealed Off**

Whenever hydrocarbon or geothermal resource fluids are encountered in any well drilled for oil, gas, or geothermal resources in this state, such fluid shall be confined in its original stratum until it can be produced and utilized without waste. Each such stratum shall be adequately protected from infiltrating waters. Wells may be drilled deeper after encountering a stratum bearing such fluids if such drilling shall be prosecuted with diligence and any such fluids be confined in its stratum and protected as aforesaid upon completion of the well. The commission will require each such stratum to be cased off and protected, if in its discretion it shall be reasonably necessary and proper to do so.

Source Note: The provisions of this §3.7 adopted to be effective January 1, 1976.

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.6	**Application for Multiple Completion**

(a) Authority will be granted to multicomplete a well in separate reservoirs that are not in communication without the necessity of notice and hearing on each separate application; provided, that an application for multiple completion on the form prescribed and the required accompanying data, as hereafter listed, is filed with the Engineering unit of the Commission's Permitting and Production Section for its consideration and approval.

(b) If the proposed zones of completion are not presently recognized by the commission as being acceptable for multicompletion approval, all data necessary to substantiate a conclusion by the commission that the proposed zones of completion are feasible and reasonably susceptible of having multicompleted and producing wells drilled thereto and therein must be filed with the application.

(c) If the additional data furnished with the application is not considered by the commission to be sufficient to establish the proposed zones of completion as separate zones of production which are feasible and reasonably susceptible of having multicompleted and producing wells drilled thereto and therein, or if any party protests such an application, then, if an operator so elects, his application will be set for hearing.

(d) Multiple completion authority for a well will not be granted unless the following required data have been filed with the Engineering unit of the Commission's Permitting and Production Section:

(1) application for multiple completion properly executed and attested;

(2) electrical log or portion of the electric log of the well or a type electric log or a portion of the type electric log showing clearly thereon the subsurface location of the separate reservoirs claimed. Any electric log filed will be considered public information pursuant to §3.16 of this title (relating to Log and Completion Report (Statewide Rule 16);

(3) packer setting report where applicable;

(4) packer leakage test or communication test;

(5) diagrammatic sketch of the mechanical installation;

(6) letters of waiver from offset operators, or evidence that notice of application to multicomplete was given to said operators.

Source Note: The provisions of this §3.6 adopted to be effective January 1, 1976; amended to be effective February 28, 1986, 11 TexReg 545; amended to be effective November 24, 2004, 29 TexReg 10728

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.5	**Application To Drill, Deepen, Reenter, or Plug Back**

(a) Requirements for spacing, density, and units. An application for a permit to drill, deepen, plug back, or reenter any oil well, gas well, or geothermal resource well shall be made under the provisions of §§3.37, 3.38, 3.39, and/or 3.40 of this title (relating to Statewide Spacing Rule; Well Densities; Proration and Drilling Units: Contiguity of Acreage and Exception Thereto; and Assignment of Acreage to Pooled Development and Proration Units) (Statewide Rules 37, 38, 39, and 40), or as an exception thereto, or under special rules governing any particular oil, gas, or geothermal resource field or as an exception thereto and filed with the commission on a form approved by the commission. An application must be accompanied by any relevant information, form, or certification required by the Railroad Commission or a commission representative necessary to determine compliance with this rule and state law.

(b) Definitions. The following words and terms, when used in this section, shall have the following meanings, unless the context clearly indicates otherwise.

(1) Application--Request by an organization made either on the prescribed form or electronically pursuant to procedures for electronic filings adopted by the commission for a permit to drill, deepen, plug back, or reenter any oil well, gas well, or geothermal resource well.

(2) Commission--The Railroad Commission of Texas.

(3) Commission representative--A commission employee authorized to act for the commission. Any authority given to a commission representative is also retained by the commission. Any action taken by the commission representative is subject to review by the commission.

(c) Commencement of operations. Operations of drilling, deepening, plugging back, or reentering shall not be commenced until the permit has been granted by the commission and the waiting period, if any, has terminated, or authorization has been granted pursuant to subsection (d) of this section.

(d) Testing of existing wells in other reservoirs inside the casing. For an existing well, an operator may request authorization to commence operations to deepen inside the casing or plug back prior to the granting of a permit to deepen or plug back.

(1) This authorization shall be requested by submitting a request with the district office to deepen inside the casing or plug back. The request shall include:

(A) the operator name;

(B) the lease name;

(C) the lease number or gas identification number;

(D) well number;

(E) county;

(F) field name;

(G) a list of all reservoir(s) to be tested;

(H) the casing setting depth and the depth of the deepest reservoir to be tested;

(I) a plat showing the well location; and

(J) a statement as to whether or not the well location would require an exception to §§3.37, 3.38, 3.39, and/or 3.40 of this title (relating to Statewide Spacing Rule; Well Densities; Proration and Drilling Units: Contiguity of Acreage and Exception Thereto; and Assignment of Acreage to Pooled Development and Proration Units) (Statewide Rules 37, 38, 39, and 40) if completed in any of the reservoirs to be tested. If an exception would be required, the request shall also include a statement that all affected offsets have been given written notice of the intent to test with the opportunity to witness the testing and the offsets shall be identified on the plat.

(2) Operations of deepening inside the casing or plugging back shall not be commenced until the district office has reviewed and approved the request. Testing pursuant to this authorization shall be completed within 90 days from the date the district office approves the request.

(A) No reservoir tested pursuant to the provisions of this subsection shall be tested for more than 15 days.

(B) If the operator desires to place the well on production, the operator shall shut in the well, with no production being sold, and file a permit application for the tested reservoirs with the appropriate fees. If the permit application for the tested reservoirs requires an exception to §§3.37, 3.38, 3.39, and/or 3.40 of this title (relating to Statewide Spacing Rule; Well Densities; Proration and Drilling Units: Contiguity of Acreage and Exception Thereto; and Assignment of Acreage to Pooled Development and Proration Units) (Statewide Rules 37, 38, 39, and 40), no consideration will be given by the commission to the cost of recompleting and testing the well in determining whether or not to grant the exception.

(C) Within 30 days of completion of testing, the operator must either file an application for a permit to produce a reservoir tested pursuant to this subsection or file an amended completion report in accordance with §3.16 of this title (relating to Log and Completion or Plugging Report) (Statewide Rule 16) with a copy of the request signed by the district office and a statement that a permit to produce a tested reservoir is not being sought, or if the well has been plugged and abandoned, a plugging report including reservoir and perforation data. If a permit is not obtained for the tested reservoirs and/or an allowable is not assigned, the producer shall report all test production in the producer's monthly report filed for the last permitted reservoir in which the well was completed and may request authorization to sell the test production. The test production may be sold after such authorization is granted.

(e) Exploratory and specialty wells. An application for any exploratory well or cathodic protection well that penetrates the base of the fresh water strata, fluid injection well, injection water source well, disposal well, brine solution mining well, or underground hydrocarbon storage well shall be made and filed with the commission on a form approved by the commission. Operations for drilling, deepening, plugging back, or reentering shall not be commenced until the permit has been granted by the commission. For an exploratory well, an exception to filing such form prior to commencing operations may be obtained if an application for a core hole test is filed with the commission.

(f) Drilling permit fee. With each application or materially amended application, the applicant shall submit to the commission a nonrefundable fee as determined by §3.78 of this title (relating to Fees and Financial Security Requirements) (Statewide Rule 78).

(g) Expiration. Any permit to drill, deepen, plug back, or reenter granted by the commission expires no later than two years after the date of original approval.

(h) Plats. An application to drill, deepen, plug back, or reenter shall be accompanied by a neat, accurate plat, with a scale of one inch equals 1,000 feet. The plat for the initial well on the lease, pooled unit, or unitized tract shall show the entire lease, pooled unit, or tract, including all tracts being pooled. If necessary to show the entire lease, the scale may be one inch equals 2,000 feet. Plats for subsequent wells on a lease or pooled unit shall show at least the lease or pooled unit line nearest the proposed location and the nearest survey/section lines. The Division Director or the director's delegate may approve plats with other scales upon request.

(1) The lease shall be outlined on the plat using either a heavy line or crosshatching.

(2) The plat is to include the following:

(A) surface location of the proposed drilling site;

(B) perpendicular lines providing the distance in feet from two nearest non-parallel survey/section lines to the surface location;

(C) perpendicular lines providing the distance in feet from two nearest non-parallel lease lines to the surface location;

(D) a line providing the distance in feet from the surface location to the nearest point on the lease line, pooled unit line, or unitized tract line. If there is an unleased interest in a tract of the pooled unit that is nearer than the pooled unit line, the nearest point on that unleased tract boundary shall be used;

(E) a line providing the distance in feet from the surface location to the nearest oil, gas, or oil and gas well identified by number either applied for, permitted, or completed in the same lease, pooled unit, or unitized tract and in the same field and reservoir;

(F) the geographic location information;

(G) a labeled scale bar; and

(H) northerly direction.

(3) Requirements for plats as provided for in §3.11, §3.37, §3.38, and §3.86 of this title (relating to Inclination and Directional Surveys Required, Statewide Spacing Rule, Well Densities, and Horizontal Drainhole Wells) may supplement or replace the plat requirements set out above.

Source Note: The provisions of this §3.5 adopted to be effective January 1, 1976; amended to be effective September 1, 1983, 8 TexReg 3184; amended to be effective March 10, 1986, 11 TexReg 901; amended to be effective October 30, 1986, 11 TexReg 4214; amended to be effective February 24, 1992, 17 TexReg 1225; amended to be effective September 1, 1992, 17 TexReg 5283; amended to be effective July 10, 2000, 25 TexReg 6487; amended to be effective June 11, 2001, 26 TexReg 4088; amended to be effective September 1, 2004, 29 TexReg 8271

Texas Administrative Code

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.4	**Oil and Geothermal Lease Numbers and Gas Well ID Numbers Required on All Forms**

(a) Lease name and number.

(1) All operators with oil and geothermal producing properties must ascertain from the appropriate proration schedule the lease number assigned to each separate lease, and thereafter include on each commission-required form or report the exact lease name and its number as they appear on the current proration schedule for all leases.

(2) No commission-required form or report will be accepted until the form or report is properly completed, including both the lease name and lease number applicable thereto.

(3) If a lease has not been issued a lease number on the current proration schedule, the lease shall have assigned to it the exact lease name as shown on the form first submitted, and in addition thereto a lease number will be assigned at the same time the form reflecting the potential test is submitted and processed. Subsequent to the assignment of a lease number, such number together with the exact lease name as submitted on the appropriate form must appear on all future forms and reports submitted to the commission, the lease number and lease name as assigned by the commission to be evidenced to the operator on the face of the supplement establishing the allowable for the lease.

(b) Gas well identification numbers shall be assigned by the commission for each separate gas well completion, and such gas well identification number shall be used on all forms and reports required by and filed with the commission concerning operations for such well so long as it remains a gas well, such commission gas well identification number to be effective as provided in the following paragraphs.

(1) All operators having a gas well must ascertain from the appropriate current gas allowable schedule the commission gas well identification number assigned to each separate gas well completion, and thereafter include on each commission required form or report its exact well lease name and number and its commission gas well identification number as they appear on the current gas allowable schedule for all gas wells completed in the same reservoir.

(2) No commission-required form or report will be accepted until the form or report is properly completed, including both the well lease name and number and the commission gas well identification number applicable thereto.

(3) If a gas well has not been assigned a gas well identification number on the current gas allowable schedule, such well shall have assigned to it the exact well lease name and number as shown on the appropriate form and, in addition thereto, a gas well identification number will be assigned at the time the commission-required form is submitted and processed. After the assignment of a gas well identification number, such number together with the exact well lease name and number on the form first submitted, must appear on all future forms and reports submitted to the commission, the gas well lease name and gas well identification number as assigned by the commission to be evidenced to the operator on the face of the supplement establishing the initial allowable for such well.

Source Note: The provisions of this §3.4 adopted to be effective January 1, 1976.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.3	**Identification of Properties, Wells, and Tanks**

Each property that produces oil, gas, or geothermal resources and each oil, gas, or geothermal resource well and tank, or other approved crude oil measuring facility where tanks are not utilized thereon, shall at all times be clearly identified as follows.

(1) A sign shall be posted at the principal entrance to each such property which shall show the name by which the property is commonly known and is carried on the records of the commission, the name of the operator, and the number of acres in the property.

(2) A sign shall be posted at each well site which shall show the name of the property, the name of the operator, and the well number.

(3) A sign shall be posted at or painted on each oil stock tank and on each remotely located satellite tank, or on each approved crude oil measuring facility where tanks are not utilized, that is located on or serving each property, which signs shall show, in addition to the information provided for in paragraph (1) of this section, the commission lease number for the formation from which oil in the tank, or in an approved crude oil measuring facility, is produced, and where oil from more than one formation is commingled in the same tank, or in an approved crude oil measuring facility, the sign shall show the number of the commission permit that authorized the commingling of the oil; provided that, if there is more than one tank in a battery which contains oil from only one formation or oil from different formations that is commingled pursuant to a single commingling permit, it will not be necessary for the sign to be posted at or painted on each tank if the sign posted at or painted on a tank in the battery shows the required information and clearly identifies, by tank number or otherwise, the tanks to which the information is applicable.

(4) If a well is separately completed in two or more producing formations, the wellhead valve and flow line serving each separate formation shall be identified by a metal tag or other lettering attached to or painted on either the valve or flow line which shows the name of the formation and identifies the completion string of casing or tubing, as for example "C" for casing; "UT" for upper tubing; "LT" for lower tubing, etc., each being preceded or followed by the name of the producing formation.

(5) The signs and identification required by this section shall be in the English language, clearly legible, and in the case of the signs required by paragraphs (1), (2), and (3) of this section shall be in letters and numbers at least one inch in height.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.2	**Commission Access to Properties**

(a) The commission or its representatives shall have access to come upon any lease or property operated or controlled by an operator, producer, or transporter of oil, gas, or geothermal resources, and to inspect any and all leases, properties, and wells and all records of said leases, properties, and wells.

(b) Designated agents of the commission are authorized to make any tests on any well at any time necessary to conservation regulation, and the owner of such well is hereby directed to do all things that may be required of him by the commission's agent to make such tests in a proper manner.

Source Note: The provisions of this §3.2 adopted to be effective January 1, 1976.

TITLE 16	ECONOMIC REGULATION
PART 1	RAILROAD COMMISSION OF TEXAS
CHAPTER 3	OIL AND GAS DIVISION
RULE §3.106	**Sour Gas Pipeline Facility Construction Permit**

(a) Definitions. The following words and terms when used in this section shall have the following meanings, unless the context clearly indicates otherwise.

(1) Affected person--The owner or occupant of real property located in the area of influence of the proposed route of a sour gas pipeline facility. If the final proposed route of the pipeline is unknown at the time of application, then an affected person is any person who owns or occupies real property located within the area of influence associated with any possible pipeline route identified by the applicant. For purposes of this definition, the owner shall be the owner of record as of the final day to protest an application. The occupant shall be the occupant as of the final day to protest an application.

(2) Applicant--A person who has filed an application for a permit to construct a sour gas pipeline facility, or a representative of that person.

(3) Application--Application for a Permit to Construct a Sour Gas Pipeline Facility, and all required attachments.

(4) Area of influence--Area along a sour gas pipeline facility represented by all possible areas of exposure using the 100 ppm radius.

(5) Construction of a facility--Any activity conducted during the initial construction of a pipeline including the removal of earth, vegetation, or obstructions along the proposed pipeline right-of-way. The term does not include:

(A) surveying or acquiring the right-of-way;

(B) clearing the right-of-way with the consent of the owner;

(C) repairing or maintaining an existing sour gas pipeline facility; or

(D) installing valves or meters or other devices or fabrications on an existing pipeline if such devices or fabrication do not result in an increase in the area of influence.

(6) Extension of a sour gas pipeline facility--An addition to an operating sour gas pipeline facility regardless of ownership of the addition.

(7) Nominal pipe size--The industry convention for naming pipe. Six inch nominal size pipe corresponds to pipe with an approximate inner diameter of six inches. The actual inner diameter varies based on the wall thickness of the pipe.

(8) Person--An individual, partnership, firm, corporation, joint venture, trust, association, or any other business entity, a state agency or institution, county, municipality, school district, or other governmental subdivision.

(9) Preliminary contingency plan--A contingency plan containing all of the elements required for a

contingency plan under §3.36 of this title (relating to oil, gas, or geothermal resource operation in hydrogen sulfide areas), except that:

(A) the plan need not contain the list of names and telephone numbers of residents within the area of influence if required under §3.36(c)(9)(I) of this section. In lieu of this list of names and telephone numbers, the plan shall contain a detailed explanation of the manner in which the names and telephone numbers of residents within the area of influence will be compiled prior to commencement of operations;

(B) the plat detailing the area of influence may be:

(i) the detailed plat required under §3.36(c)(9)(H);

(ii) a plat containing the information required under §3.36(c)(9)(H), that identifies residential, business, and industrial areas with an estimate of the number of people that may be within any such areas; or

(iii) one or more aerial photographs covering the area and providing the information required under §3.36(c)(9)(H); and

(C) a fixed pipeline route need not be specified in the preliminary plan provided the preliminary plan identifies the boundaries of the area within which the pipeline will be constructed and provided that all public notices of the application required under this section note such boundaries and identify the potential area of influence as the total area encompassed by the area of influence associated with all possible pipeline routes.

(10) Sour gas pipeline facility--A pipeline and ancillary equipment that:

(A) contains a concentration of 100 parts per million or more of hydrogen sulfide;

(B) is located outside the tract of production; and

(C) is subject to the requirements of §3.36 of this title.

(11) Tract of production--The surface area which overlies the area encompassed by a mineral lease or unit from which oil, gas, or other minerals are produced if such area is treated by the Oil and Gas Division of the commission as a single tract.

(12) 100 ppm radius--The 100 parts per million radius of exposure as calculated in §3.36(c)(1) - (3) of this title (relating to oil, gas, or geothermal resource operation in hydrogen sulfide areas) for the sour gas pipeline facility.

(b) Permit Required; Exceptions. No person may commence construction of a facility within this State without a permit if the facility is initially used as a sour gas pipeline facility except for the following:

(1) an extension of an existing sour gas pipeline facility that at the time of construction of the extension is in compliance with §3.36 of this title (relating to oil, gas, or geothermal resource operation in a hydrogen sulfide area) if:

(A) the extension is not longer than five miles;

(B) the nominal pipe size is not larger than six inches; and

(C) the operator causes to be delivered to the Safety Division written notice of construction of the extension not later than 24 hours before the start of construction;

(2) a new gathering system that operates at a working pressure of less than 50 pounds per square inch gauge;

(3) an extension of a gathering system which operates at a working pressure of less than 50 pounds per square inch gauge;

(4) an interstate gas pipeline facility, as defined by 49 U.S.C. §60101, that is used for the transportation of sour gas; or

(5) replacement of all or part of a sour gas pipeline facility if the area of influence of the replaced portion of the facility does not increase so as to include a public area, as defined in §3.36(b)(5) of this title, not included in the area of influence of the portion of the replaced sour gas pipeline facility.

(c) Filing and Assignment of Docket Number. Upon filing of an application with the Oil and Gas Division, staff will assign a docket number to the application and will notify the applicant of the assigned docket number. Staff will also assign and provide a docket number to a person who submits a notice of intent to file an application.

(d) Application. A complete application consists of:

(1) a properly completed application Form PS-79, with the original signature, in ink, of the applicant;

(2) if applicant desires notification under subsection (h)(1) by electronic mail, a written request for electronic mail notification and the applicant's electronic mail address;

(3) a plat which meets the requirements of subsection (f)(4) of this section and identifies the boundaries of surveys and blocks or sections as appropriate within the area of influence;

(4) a copy of the applicant's Application for Permit to Operate a Pipeline, Form T-4, if applicable, including all attachments; and

(5) a copy of the completed application for a Statewide Rule 36 Certificate of Compliance, Form H-9, including any attachment required under §3.36 of this title. A preliminary contingency plan may be filed in lieu of a contingency plan if required under §3.36 of this title.

(e) Notice.

(1) For each county that contains all or part of the area of influence of a proposed sour gas pipeline facility, the applicant shall:

(A) cause to be delivered to the county clerk no later than the first date of publication in that county a copy of the items described in subsection (d)(1) - (3) of this section;

(B) publish notice of its application in a newspaper of general circulation in each county that contains all or a portion of the area of influence of the proposed sour gas pipeline facility. Such notice shall meet the requirements of subsection (f) of this section and be published in a section of the newspaper containing news items of state or local interest.

(2) Final action may not be taken on any application under this section until proof of notice, evidenced as follows, is provided:

(A) a return receipt from each county clerk with whom an application form and plat is required to be filed pursuant to paragraph (1) of this subsection; and

(B) the full page or pages of the newspaper containing the published notice required under paragraph (2) of this subsection including the name of the paper, the date the notice was published, and the page number.

(f) The published notice of application shall be at least three inches by five inches in size, exclusive of the plat, and shall contain the following:

(1) the name, business address, and telephone number of the applicant and of the applicant's authorized representative, if any;

(2) a description of the geographic location of the sour gas pipeline facility and the area of influence, to the extent not clearly identified in the plat required to be published in subsection (f)(4) of this section;

(3) the following statement, completed as appropriate: "This proposed pipeline facility will transport sour gas that contains 100 parts per million, or more, of hydrogen sulfide. A copy of application forms and a map showing the location of the pipeline is available for public inspection at the offices of the (insert County name) County Clerk, located at the following address: (insert address of County Clerk). Any owner or occupant of land located within the area of influence of the proposed sour gas pipeline facility desiring to protest this application can do so by mailing or otherwise delivering a letter referring to the application (by docket number if available) and stating their desire to protest to: Docket Services, Office of General Counsel, Railroad Commission of Texas, P.O. Box 12967, Austin, Texas 78711-2967. Protests shall be in writing and received by Docket Services not later than (specify 30th day after the first date notice of the application is to be published). The letter shall include the name, address, and telephone number of every person on whose behalf the protest is filed and shall state the reasons each such person believes that he or she is the owner or occupant of property within the area of influence of the proposed pipeline facility. It is recommended that a copy of this notice be included with the letter."; and

(4) a plat identifying:

(A) the location of the pipeline facility;

(B) area of influence;

(C) north arrow;

(D) scale;

(E) geographic subdivisions appropriate for the scale; and

(F) by inset or otherwise, landmarks or other features such as roads and highways in relation to the proposed route of the sour gas pipeline facility. These landmarks or other features shall be of sufficient detail to allow a person to reasonably ascertain whether an owned or occupied property that is within the area of influence of the proposed sour gas pipeline facility. Examples of acceptable plats are included in this subsection.

Attached Graphic

(g) Protests. Affected persons have standing to file a protest to an application. In the event the final proposed pipeline route is not known at the time of application, any person who owns or occupies real property located within the area of influence identified in the application shall have standing to file a protest to an application. All such protests shall:

(1) be in writing and filed at the commission no later than the 30th day after the notice is published in a newspaper in the county in which the person filing the protest owns or occupies real property;

(2) state the name, address, and telephone number of every person on whose behalf the protest is being filed; and

(3) include a statement of the facts on which the person filing the protest relies to conclude that each person on whose behalf the protest is being filed is an affected person, as defined in subsection (a)(1) of this section.

(h) Division Review.

(1) Within 14 days of receipt of the application, the commission's designee will provide notice to the applicant that the application is either complete and accepted for filing, or incomplete and specify the additional information required for acceptance. Such notice shall be provided in writing by mail or by electronic mail if the applicant submits with the application a written request that communications regarding application completeness or deficiencies be communicated by electronic mail and provides an accurate electronic mail address. The application shall be completed within 30 days of notification that the application is incomplete or such longer time as may be requested by the applicant, in writing, and approved by the commission's designee. If the application is not completed within the specified time period, the commission's designee shall send notice of intent to deny the application to the applicant. Within ten days of issuance of a notice of intent to deny the application for failure to complete the application, the applicant may request a hearing on the application as it exists at that time. If a request for hearing is not filed within ten days of issuance of a notice of intent to deny the application for failure to complete the application, the application shall be Cont'd...

Appendix F – Utah Regulatory Summary (General)

Utah Division of Oil, Gas, and Mining

R649. Natural Resources; Oil, Gas and Mining; Oil and Gas.
R649-1. Oil and Gas General Rules.
R649-1-1. Definitions.

"Authorized Agent" means a representative of the director as authorized by the board.

"Aquifer" means a geological formation including a group of formations or part of a formation which is capable of yielding a significant amount of water to a well or spring.

"Artificial Liner" means a pit liner made of material other than clay or other in situ material and which meets the requirements of R649-9-3, Permitting of Disposal Pits.

"Barrel" means 42 (US) gallons at 60 degrees Fahrenheit at atmospheric pressure.

"Board" means the Board of Oil, Gas and Mining.

"Carrier, Transporter or Taker" means any person moving or transporting oil or gas away from a well or lease or from any pool.

"Casing Pressure" means the pressure within the casing or between the casing and tubing at the wellhead.

"Central Disposal Facility" means a facility which is used by one or more producers for disposal of exempt E and P wastes and for which the operator of the facility receives no monetary remuneration, other than operating cost sharing.

"Class II Injection Well" means a well which is used for:

(a) The disposal of fluids which are brought to the surface in connection with conventional oil or natural gas production and which may be commingled with wastewater produced from the operation of a gas plant that is an integral part of production operations, unless that wastewater is classified as a hazardous waste at the time of injection, or

(b) Enhanced recovery of oil or gas, or

(c) Storage of hydrocarbons which are liquids at standard temperature and pressure conditions.

"Closed System" means but is not limited to, the use of a combination of solids control equipment (i.e., shale shakers, flowline cleaners, desanders, desilters, mud cleaners, centrifuges, agitators, and necessary pumps and piping) incorporated in a series on the rig's steel mud tanks, or a self contained unit that eliminates the use of a reserve pit for the purpose of dumping and dilution of drilling fluids for the removal of entrained drill solids. A closed system for the purpose of these rules may with Division approval include the use of a small pit to receive cuttings, but does not include the use of trenches for the collection of fluids of any kind.

"Coalbed Methane" means natural gas that is produced, or may be produced, from coalbeds and rock strata associated with the coalbed.

"Commercial Disposal Facility" means a disposal well, pit or treatment facility whose owner(s) or operator(s) receives compensation from others for the temporary storage, treatment, and disposal of produced water, drilling fluids, drill cuttings, completion fluids, and any other exempt E and P wastes, and whose primary business objective is to provide these services.

"Completion of a Well" means that the well has been adequately worked to be capable of producing oil or gas or that well testing as required by the division has been concluded.

"Confining Strata" refers to a body of material that is relatively impervious to the passage of liquids or gases and that occurs either below, above, or lateral to a more permeable material in such a way that it confines or limits the movement of liquids or gases that may be present.

"Correlative Rights" means the opportunity of each owner in a pool to produce his just and equitable share of the oil and gas in the pool without waste.

"Cubic Foot" of gas means the volume of gas contained in one cubic foot of space at a standard pressure base of 14.73 psia and a standard temperature base of 60 degrees Fahrenheit.

"Day" means a period of 24 consecutive hours.

"Development Wells" means all oil and gas producing wells other than wildcat wells.

"Director" means the executive and administrative head of the division.

"Disposal Facility" means an injection well, pit, treatment facility or combination thereof which receives E and P Wastes for the purpose of disposal. This includes both commercial and noncommercial facilities.

"Disposal Pit" means a lined or unlined pit approved for the disposal and/or storage of E and P Wastes.

"Division" means the Division of Oil, Gas and Mining.

"Drilling Fluid" means a circulating fluid usually called mud, which is introduced in a drill hole to lubricate the action of the rotary bit, remove the drilling cuttings, and control formation pressures.

"E and P Waste" means those wastes resulting from the drilling of and production from oil and gas wells as determined by the Environmental Protection Agency (EPA), prior to January 1, 1992, to be exempt from Subtitle C of the Resource Conservation and Recovery Act (RCRA).

"Emergency Pit" means a pit used for containing fluids at an operating well during an actual emergency or for a temporary period of time.

"Enhanced Recovery" means the process of introducing fluid or energy into a pool for the purpose of increasing the recovery of hydrocarbons from the pool.

"Enhanced Recovery Project" means the injection of liquids or hydrocarbon or nonhydrocarbon gases directly into a reservoir for the purpose of augmenting reservoir energy, modifying the properties of the fluids or gases in the reservoir, or changing the reservoir conditions to increase the recoverable oil, gas, or oil and gas through the joint use of two or more well bores.

"Entity" means a well or a group of wells that have identical division of interest, have the same operator, produce from the same formation, have product sales from a common tank, LACT meter, gas meter, or are in the same participating area of a properly designated unit. Entity number assignments are made by the division in cooperation with the Division of State Lands and

Forestry and the State Tax Commission.

"Field" means the general area underlaid by one or more pools.

"Gas" means natural gas or natural gas liquids or other gas or any mixture thereof defined as follows:

"Natural Gas" means those hydrocarbons, other than oil and other than natural gas liquids separated from natural gas, that occur naturally in the gaseous phase in the reservoir and are produced and recovered at the wellhead in gaseous form. Natural gas includes coalbed methane.

"Other Gas" means hydrogen sulfide, carbon dioxide, helium, nitrogen, and other nonhydrocarbon gases that occur naturally in the gaseous phase in the reservoir or are injected into the reservoir in connection with pressure maintenance, gas cycling, or other secondary or enhanced recovery projects.

"Natural Gas Liquids" means those hydrocarbons initially in reservoir natural gas, regardless of gravity, that are separated in gas processing plants from the natural gas as liquids at the surface through the process of condensation, absorption, adsorption, or other methods.

"Gas-Oil Ratio" means the ratio of the number of cubic feet of natural gas produced to the number of barrels of oil concurrently produced during any stated period. The term GOR is synonymous with gas-oil ratio.

"Gas Processing Plant" means a facility in which liquefiable hydrocarbons are removed from natural gas, including wet gas or casinghead gas, and the remaining residue gas is conditioned for delivery for sale, recycling or other use.

"Gas Well" means any well capable of producing gas in substantial quantities that is not an oil well.

"Ground Water" means water in a zone of saturation below the ground surface.

"Hearing" means any matter heard before the board or its designated hearing examiner.

"Horizontal Well" means a well bore drilled laterally at an angle of at least eighty (80) degrees to the vertical or with a horizontal projection exceeding one hundred (100) feet measured from the initial point of penetration into the productive formation through the terminus of the lateral in the same common source of supply.

"Illegal Oil or Illegal Gas" means oil or gas that has been produced from any well within the state in violation of Chapter 6 of Title 40, or any rule or order of the board.

"Illegal Product" means any product derived in whole or in part from illegal oil or illegal gas.

"Incremental Production" means that part of production which is achieved from an enhanced recovery project that would not have economically occurred under the reservoir conditions existing before the project and that has been approved by the division as incremental production.

"Injection or Disposal Well" means any Class II Injection Well used for the injection of air, gas, water or other substance into any underground stratum.

"Interest Owner" means a person owning an interest (working interest, royalty interest, payment out of production, or any other interest) in oil or gas, or in the proceeds thereof.

"Load Oil" means any oil or liquid hydrocarbon which is used in any remedial operation in an oil or gas well.

"Log or Well Log" means the written record progressively describing the strata, water, oil or gas encountered in drilling a well with such additional information as is usually recorded in the normal procedure of drilling including electrical, radioactivity, or other similar conventional logs, a lithologic description of samples and drill stem test information.

"Multiple Zone Completion" means a well completion in which two or more separate zones, mechanically segregated one from the other, are produced simultaneously from the same well.

"Oil" means crude oil or condensate or any mixture thereof, defined as follows:

"Crude Oil" means those hydrocarbons, regardless of gravity, that occur naturally in the liquid phase in the reservoir and are produced and recovered at the wellhead in liquid form.

"Condensate" means those hydrocarbons, regardless of gravity, that occur naturally in the gaseous phase in the reservoir that are separated from the natural gas as liquids through the process of condensation either in the reservoir, in the well bore or at the surface in field separators.

"Oil and Gas" shall not include gaseous or liquid substances derived from coal, oil shale, tar sands or other hydrocarbons classified as synthetic fuel.

"Oil and Gas Field" means a geographical area overlying an oil and gas pool.

"Oil Well" means any well capable of producing oil in substantial quantities.

"Operator or Designated Agent" means the person who has been designated by the owners or the board to operate a well or unit.

"Owner" means the person who has the right to drill into and produce from a reservoir and to appropriate the oil and gas that he produces, either for himself or for himself and others.

"Person" means and includes any natural person, bodies politic and corporate, partnerships, associations and companies.

"Pit" means an earthen surface impoundment constructed to retain fluids and oil field wastes.

"Pollution" means such contamination or other alteration of the physical, chemical or biological properties of any waters of the state, or the discharge of any liquid, gaseous or solid substance into any waters of the state in such manner as will create a nuisance or render such waters harmful, detrimental or injurious to the public health, safety or welfare; to domestic, commercial, industrial, agricultural, recreational, or other legitimate beneficial uses; or to livestock, wild animals, birds, fish or other aquatic life.

"Pool" means an underground reservoir containing a common accumulation of oil or gas or both. Each zone of a general structure that is completely separated from any other zone in the structure is a separate pool. "Common source of supply" and "reservoir" are synonymous with "pool."

"Pressure Maintenance" means the injection of gas, water or other fluids into a reservoir, either to increase or maintain the existing pressure in such reservoir or to retard the natural decline in the reservoir pressure.

"Produced Water" means water produced in conjunction with the conventional production of oil and/or gas.

"Producer" means the owner or operator of a well capable of producing oil or gas.

"Producing Well" means a well capable of producing oil or gas.

"Product" means any commodity made from oil and gas.

"Production Facilities" means all storage, separation, treating, dehydration, artificial lift, power supply, compression, pumping, metering, monitoring, flowline, and other equipment directly associated with oil wells, gas wells or injection wells, prior to any processing plant or refinery.

"Purchaser or Transporter" means any person who, acting alone or jointly with any other person, by means of his own, an affiliated, or designated carrier, transporter or taker, shall directly or indirectly purchase, take or transport by any means whatsoever, or who shall otherwise remove from any well or lease, oil or gas produced from any pool, excepting royalty portions of oil or gas taken in kind by an interest owner who is not the operator.

"Recompletion" means any completion in a new perforated interval or pool within an established wellbore and approved as a recompletion by the division.

"Refinery" means a facility, other than a gas processing plant, where controlled operations are performed by which the physical and chemical characteristics of petroleum or petroleum products are changed.

"Reserve Pit" means a pit used to retain fluid during the drilling, completion, and testing of a well.

"Seismic Operator" means a person who conducts seismic exploration for oil or gas, whether for himself or as a contractor for others.

"Shut-in Well" means a well that is completed, is shown to be capable of production in paying quantities, and is not presently being operated.

"Spud In" means the first boring of a hole in the drilling of a well by any type of rig.

"State" means the State of Utah.

"Stratigraphic Test or Core Hole" means any hole drilled for the sole purpose of obtaining geological information. The general rules applicable to the drilling of a well will apply to the drilling of a stratigraphic test or core hole.

"Temporarily Abandoned Well" means a well that is completed, is not shown capable of production in paying quantities, and is not presently being operated.

"Temporary Spacing Unit" means a specified area of land designated by the board for purposes of determining well density and location. A temporary spacing unit shall not be a drilling unit as provided for in U.C.A. 40-6-6, Drilling Units, and does not provide a basis for pooling the interest therein as does a drilling unit.

"Underground Source of Drinking Water" means a fresh water aquifer or a portion thereof that supplies drinking water for human consumption or that contains less than 10,000 mg/1 total dissolved solids and that is not an exempted aquifer under R649-5-4.

"Waste" means:

The inefficient, excessive or improper use or the unnecessary dissipation of oil or gas or reservoir energy.

The inefficient storing of oil or gas.

The locating, drilling, equipping, operating, or producing of any oil or gas well in a manner that causes reduction in the quantity of oil or gas ultimately recoverable from a reservoir under prudent and economical operations, or that causes unnecessary wells to be drilled, or that causes the loss or destruction of oil or gas either at the surface or subsurface.

The production of oil or gas in excess of:

Transportation or storage facilities.

The amount reasonably required to be produced in the proper drilling, completing, testing, or operating of a well or otherwise utilized on the lease from which it is produced.

Underground or above ground waste in the production or storage of oil or gas.

"Waste Crude Oil Treatment Facility" means any facility or site constructed or used for the purpose of wholly or partially reclaiming, treating, processing, cleaning, purifying or in any manner making nonmerchantable waste crude oil marketable.

"Well" means an oil or gas well, injection or disposal well, or a hole drilled for the purpose of producing oil or gas or both. The definition of well shall not include water wells, or seismic, stratigraphic test, core hole, or other exploratory holes drilled for the purpose of obtaining geological information only.

"Well Site" means the areas which are directly disturbed during the drilling and subsequent use of, or affected by production facilities directly associated with any oil well, gas well or injection well.

"Wildcat Wells" means oil and gas producing wells which are drilled and completed in a pool in which a well has not been previously completed as a well capable of producing in commercial quantities.

"Working Interest Owner" means the owner of an interest in oil or gas burdened with a share of the expenses of developing and operating the property.

"Workover" means any operation designed to sustain, to restore, or to increase the production rate, the ultimate recovery, or the reservoir pressure system of a well or group of wells and approved as a workover, a secondary recovery, a tertiary recovery, or a pressure maintenance project by the division. The definition shall not include operations which are conducted principally as routine maintenance or the replacement of worn or damaged equipment.

KEY: oil and gas law
June 2, 1998 **40-6-1 et seq.**
Notice of Continuation March 26, 2002

R649. Natural Resources; Oil, Gas and Mining; Oil and Gas.

R649-2. General Rules.

R649-2-1. Scope of Rules.

The following general rules adopted by the board pursuant to Chapter 6 of Title 40 shall apply to all lands in the state in order to conserve the natural resources of oil and gas in the state, to protect human health and the environment, to prevent waste, to protect the correlative rights of all owners and to realize the greatest ultimate recovery of oil and gas. Special rules and orders have been and will be issued by the board when required and shall prevail as against the general rules and orders of the board if in conflict therewith. Exceptions to the general rules may also be granted by the director or authorized agent for good cause shown and shall prevail as against the general rules. No exceptions granted by the board, director, or authorized agent to the rules applicable to the Underground Injection Control Program will be effective without the consent of the federal Environmental Protection Agency.

R649-2-2. Application Of Rules To Lands Owned Or Controlled By The United States.

These general rules shall apply to all lands in the state including lands of the United States and lands subject to the jurisdiction of the United States to the extent lawfully subject to the state's power.

R649-2-3. Application Of Rules To Unit Agreements.

The board may suspend the application of the general rules or orders or any part thereof, with regard to any unit agreement approved by a duly authorized officer of the appropriate federal agency, so long as the conservation of oil or gas and the prevention of waste is accomplished thereby, but such suspension shall not relieve any operator from making such reports as are otherwise required by the general rules or orders, or as may reasonably be requested by the board or the division in order to keep the board and the division fully informed as to operations under such unit agreements.

R649-2-4. Designation Of Agent Or Operator.

A designation of agent or operator shall be submitted to the division prior to the commencement of operations. A designation of agent or operator will, for purposes of the general rules and orders, be accepted as evidence of authority of agent to fulfill the obligations of the owner, to sign any required documents or reports on behalf of the owner, and to receive all authorized orders or notices given by the board or the division. All changes of address and any termination of the designated agent's or operator's authority shall be promptly reported in writing to the division, and in the latter case a designation of a new agent or operator shall be promptly made.

R649-2-5. Right To Inspect.

1. The director or authorized agent shall have the right at

all reasonable times to go upon and inspect any oil or gas properties and wells for the purpose of making any investigations or tests reasonably necessary to ensure compliance with the provisions of the statutes, the general rules and orders of the board or any special field rules and orders. The director or authorized agent shall report any observed violation to the board.

2. The documentation of off lease transportation of crude oil required by R649-2-6, Access to Records, shall be carried in the motor vehicle during transportation and shall be available for examination and inspection by the director or an authorized agent upon request.

R649-2-6. Access To Records.

1. Any person who produces, operates, sells, purchases, acquires, stores, transports, refines, or processes oil or gas or who injects fluids for cycling, pressure maintenance, secondary or enhanced recovery, or disposal of salt water or oil field waste within the state, shall make and keep appropriate books and records covering his operations in the state from which he shall be able to make and substantiate all reports required by the board or the division. Such books and records, together with copies of all reports and notices submitted to the board or the division shall be kept on file and available for inspection by the director or an authorized agent at all reasonable times for a period of at least six years. The director or the authorized agent shall also have access to all pertinent well records wherever located.

2. Each owner or operator shall permit the director or authorized agent at his sole risk and expense, in the absence of negligence on the part of the owner or operator, to come upon any lease, property or well operated or controlled by him; to inspect the records pertaining to and the manner of operation of such property or well; and to have access at all reasonable times to any and all records pertaining to such well. All information so obtained by the director or authorized agent shall be kept confidential and shall be reported only to the division or its authorized agent, unless the owner or operator gives written permission to the director to release such information.

3. All off lease transportation of oil by motor vehicle shall be accompanied by a run ticket or equivalent document. The documentation shall identify the name and address of the transporter, the name of the operator, the lease or facility from which the oil was taken, the date of removal, the API gravity of the oil, the calculated percentage of BS and W, the volume of oil or the opening and closing tank gauges or meter readings, and the destination of the oil.

R649-2-7. Naming of Oil and Gas Fields or Pools.

The division shall name oil and gas fields or pools within the state in cooperation with a Fields Names Advisory Committee and with due regard and consideration for any recommendation from the owners or operators of such fields or pools. The Field Names Advisory Committee shall be composed of a representative of the United States Bureau of Land Management and representatives of appropriate state agencies and the oil and gas industry.

R649-2-8. Measurement of Production.

1. The volume of oil production shall be computed in barrels of clean oil on the basis of acceptable meter measurements, tank measurements, or with such greater accuracy as may be required by the division. Computations of the volume of oil production shall be subject to the following corrections:

1.1. The gross volume of oil shall be corrected to exclude the entire volume of impurities not constituting a natural component part of the oil.

1.2. The observed volume of oil after correction for impurities shall be further corrected to the standard volume at 60 degrees Fahrenheit, in accordance with Table 6A of the API/ASTM D-1250, Chapter 11.1, Manual of Petroleum Measurement (1980), or any revisions or supplements, or any alternative publication or tables approved by the division.

1.3. The observed gravity of oil shall be corrected to the standard API gravity at 60 degrees Fahrenheit in accordance with Table 5A of API/ASTM, D-1250, Chapter 11.1, Manual of Petroleum Measurement (1980), or any revisions or supplements, or any alternative publication or tables approved by the division.

2. All gas shall be measured by an orifice type meter unless otherwise authorized by the division. In computing the volumes of all gas produced, sold, or injected, the standard pressure base shall be 14.73 pounds per square inch absolute (psia), and the standard temperature base shall be 60 degrees Fahrenheit. All measurements of gas shall be adjusted by computation to these standards, regardless of the pressure and temperature at which the gas was actually measured, unless otherwise authorized by the division.

R649-2-9. Refusal To Agree.

1. An owner shall be deemed to have refused to agree to bear his proportionate share of the costs of the drilling and operation of a well under Section 40-6-6(6) if:

1.1. The operator of the proposed well has, in good faith, attempted to reach agreement with such owner for the leasing of the owner's mineral interest or for that owner's voluntary participation in the drilling of the well.

1.2. The owner and the operator have been unable to agree upon terms for the leasing of the owner's interest or for the owner's participation in the drilling of the well.

2. If the operator of the proposed well shall fail to attempt, in good faith, to reach agreement with the owner for the leasing of that owner's mineral interest or for voluntary participation by that owner in the well prior to the filing of a Request for Agency Action for involuntary pooling of interests in the drilling unit under Section 40-6-6(6) then, upon written request and after notice and hearing, the hearing on the Request for Agency Action for involuntary pooling may, at the discretion of the board or its designated hearing examiner, be delayed for a period not to exceed 30 days, to allow for negotiations between the operator and the owner.

R649-2-10. Notification of Lease Sale or Transfer.

The owner of a lease shall provide notification to any person with an interest in such lease, when all or part of that interest in the lease is sold or transferred.

R649-2-11. Confidentiality Of Well Log Information.

1. Well logs marked confidential shall be kept confidential for one year after the date on which the log is required to be filed with the division, unless the operator gives written permission to release the log at an earlier date.

2. Information on a newly permitted well will be held confidential only upon receipt by the division of a written request from the owner or operator.

3. The period of confidentiality may begin at the time the APD is submitted for approval if a request for confidentiality is received at that time, although the information on the application itself will not be considered confidential.

4. Information which shall be held confidential includes well logs, electrical or radioactivity logs, electromagnetic, electrical, or magnetic surveys, core descriptions and analysis, maps, other geological, geophysical, and engineering information, and well completion reports which contain such information.

5. The owner or operator shall clearly mark documents as confidential. Such marking shall be in red to be clearly visible.

6. Confidential wells or information shall be reported separately from wells or information that is not in confidential status.

R649-2-12. Tests and Surveys.

When deemed necessary or advisable the Director or authorized agent is authorized to require that test or surveys be made to determine the presence of waste or oil, gas, water, or reservoir energy; the quantity of oil, gas or water; the amount and direction of deviation of any well from the vertical; formation, casing, tubing, or other pressures; or any other test or survey deemed necessary to carry out the purposes of the Oil and Gas Conservation Act. Directional, deviation, and/or measurements-while-drilling (MWD) surveys must be run on horizontal wells and submitted in accordance with R649-3-21, Well Completion and Filing of Well Logs, as amended for horizontal wells.

KEY: oil and gas law

Notice of Continuation March 26, 2002

R649. Natural Resources; Oil, Gas and Mining; Oil and Gas.
R649-3. Drilling and Operating Practices.
R649-3-1. Bonding.

1. An owner or operator shall furnish a bond to the division prior to approval of a permit to drill a new well, reenter an abandoned well or assume responsibility as operator of existing wells.

1.1. An owner or operator shall furnish a bond to the division on Form 4, for wells located on lands with fee or privately owned minerals.

1.2. An owner or operator shall furnish evidence to the division that a bond has been filed in accordance with state, federal or Indian lease requirements and approved by the appropriate agency for all wells located on state, federal or Indian leases.

2. A bond furnished to the division shall be payable to the division and conditioned upon the faithful performance by the operator of the duty to plug each dry or abandoned well, repair each well causing waste or pollution, and maintain and restore the well site.

3. Bond liability shall be for the duration of the drilling, operating and plugging of the well and restoration of the well site.

3.1. The bond for drilling or operating wells shall remain in full force and effect until liability thereunder is released by the division.

3.2. Release of liability shall be conditioned upon compliance with the rules and orders of the Board.

4. For all drilling or operating wells, the bond amounts for individual wells and blanket bonds required in subsections 5. and 6. represent base amounts adjusted to year 2002 average costs for well plugging and site restoration. The base amounts are effective immediately upon adoption of this bonding rule, subject to division notification as described in subsection 4.1.

4.1. The division shall provide written notification to each operator of the need to revise or establish bonds in amounts required by this bonding rule. Within 120 days of such notification by the division, the operator shall post a bond with the division in compliance with this bonding rule.

4.2. If the division finds that a well subject to this bonding rule is in violation of Rule R649-3-36., Shut-in and Temporarily Abandoned Wells, the division shall require a bond amount for the applicable well in the amount of actual plugging and site restoration costs.

4.3. The division shall provide written notification to an operator found in violation of Rule R649-3-36., and identify the need to establish increased bonding for shut-in wells. Within 30 days of notification by the division, the operator shall submit to the division an estimate of plugging and site restoration costs for division review and approval. Upon review and approval of the cost estimate, the division will provide a notice of approval back to the operator specifying the approved bond amount for shut-in wells. Within 120 days of receiving such notice of approval, the operator shall post a bond with the division in compliance with this bonding rule.

5. The bond amount for drilling or operating wells located on lands with fee or privately owned minerals shall be one of the following:

5.1. For wells of less than 1,000 feet in depth, an individual well bond in the amount of at least $1,500, for each such well.

5.2. For wells of more that 1,000 feet in depth but less than 3,000 feet in depth, an individual well bond in the amount of at least $15,000 for each such well.

5.3. For wells of more that 3,000 feet in depth but less than 10,000 feet in depth, an individual well bond in the amount of at least $30,000 for each such well.

5.4. For wells of more than 10,000 feet in depth, an individual well bond in the amount of at least $60,000 for each such well.

6. If, prior to the January 1, 2003 revision of this bonding rule, an operator is drilling or operating more than one well on lands with fee or privately owned minerals, and a blanket bond was furnished and accepted by the division in lieu of individual well bonds, that operator shall remain qualified for a blanket bond with the division subject to the amounts described by this bonding rule.

6.1. A blanket bond shall be conditioned in a manner similar to individual well bonds and shall cover all wells that the operator may drill or operate on lands with fee or privately owned minerals within the state.

6.2. For wells of less than 1,000 feet in depth, a blanket bond in the amount of at least $15,000 shall be required.

6.3. For wells of more than 1,000 feet in depth, a blanket bond in the amount of at least $120,000 shall be required.

6.4. Subsequent to the January 1, 2003 revision of this rule, operators who desire to establish a new blanket bond that consists either fully or partially of a collateral bond as described in subsection 10.2. shall be qualified by the division for such blanket bond. Operators who elect to establish a surety bond as a blanket bond shall not require qualification by the division. In those cases where operator qualification for blanket bond is required, the division will review the following criteria and make a written finding of the operator's adequacy to meet the criteria before accepting a new blanket bond:

6.4.1. The ratio of current assets to current liabilities shall be 1.20 or greater, as evidenced by audited financial statements for the previous two years and the most current quarterly financial report.

6.4.2. The ratio of total liabilities to stockholder's equity shall be 2.50 or less, as evidenced by audited financial statements for the previous two years and the most current quarterly financial report.

7. If an operator desires bond coverage in a lesser amount than required by these rules, the operator may file a Request for Agency Action with the Board for a variance from the requirements of these rules.

7.1. Upon proper notice and hearing and for good cause shown, the Board may allow bond coverage in a lesser amount for specific wells.

8. If after reviewing an application to drill or reenter a well or when reviewing a change of operator for a well, the division determines that bond coverage in accordance with these rules will be insufficient to cover the costs of plugging the well and restoring the well site, the division may require a change in the form or the amount of bond coverage. In such cases, the

division will support its case for a change of bond coverage in the form of written findings to the operator of record of the well and provide a schedule for completion of the requisite changes.

8.1 Appeals of mandated bond amount changes will follow procedures established by Rule R649-10., Administrative Procedures.

9. The bond shall provide a mechanism for the surety or other guarantor of the bond, to provide prompt notice to the division and the operator of any action alleging the insolvency or bankruptcy of the surety or guarantor, or alleging any violations which would result in suspension or revocation of the surety's or guarantor's charter or license to do business.

9.1. Upon the incapacity of the surety or guarantor to guarantee payment of the bond by reason of bankruptcy, insolvency, or suspension or revocation of a charter or license, the operator shall be deemed to be without bond coverage.

9.2. Upon notification of insolvency or bankruptcy, the division shall notify the operator in writing and shall specify a reasonable period, not to exceed 90 days, to provide bond coverage.

9.3. If an adequate bond is not furnished within the allowed period, the operator shall be required to cease operations immediately, and shall not resume operations until the division has received an acceptable bond.

10. The division shall accept a bond in the form of a surety bond, a collateral bond or a combination of these bonding methods.

10.1. A surety bond is an indemnity agreement in a sum certain payable to the division, executed by the operator as principal and which is supported by the performance guarantee of a corporation authorized to do business as a surety in Utah.

10.1.1. A surety bond shall be executed by the operator and a corporate surety authorized to do business in Utah that is listed in "A.M. Best's Key Rating Guide" at a rating of A- or better or a Financial Performance Rating (FPR) of 8 or better, according to the "A.M. Best's Guide". All surety companies also will be continuously listed in the current issue of the U.S. Department of the Treasury Circular 570. Operators who do not have a surety bond with a company that meets the standards of subsection 10.1.1. will have 120 days from the date of division notification after enactment of the changes to subsection 10.1.1., or face enforcement action. When the division in the course of examining surety bonds notifies an operator that a surety company guaranteeing its performance does not meet the standards of subsection 10.1.1., the operator has 120 days after notice from the division by mail to correct the deficiency, or face enforcement action.

10.1.2. Surety bonds shall be noncancellable during their terms, except that surety bond coverage for wells not drilled may be canceled with the prior consent of the division.

10.1.3. The division shall advise the surety, within 30 days after receipt of a notice to cancel a bond, whether the bond may be canceled on an undrilled well.

10.2. A collateral bond is an indemnity agreement in a sum certain payable to the division, executed by the operator which is supported by one or more of the following:

10.2.1. A cash account.

10.2.1.1. The operator may deposit cash in one or more accounts at a federally insured bank authorized to do business in Utah, made payable upon demand only to the division.

10.2.1.2. The operator may deposit the required amount directly with the division.

10.2.1.3. Any interest paid on a cash account shall be retained in the account and applied to the bond value of the account unless the division has approved the payment of interest to the operator.

10.2.1.4. The division shall not accept an individual cash account in an amount in excess of $100,000 or the maximum insurable amount as determined by the Federal Deposit Insurance Corporation.

10.2.2. Negotiable bonds of the United States, a state, or a municipality.

10.2.2.1. The negotiable bond shall be endorsed only to the order of and placed in the possession of the division.

10.2.2.2. The division shall value the negotiable bond at its current market value, not at face value.

10.2.3. Negotiable certificates of deposit.

10.2.3.1. The certificates shall be issued by a federally insured bank authorized to do business in Utah.

10.2.3.2. The certificates shall be made payable or assigned only to the division both in writing and upon the records of the bank issuing the certificate.

10.2.3.3. The certificates shall be placed in the possession of the division or held by a federally insured bank authorized to do business in Utah.

10.2.3.4. If assigned, the division shall require the banks issuing the certificates to waive all rights of setoff or liens against those certificates.

10.2.3.5. The division shall not accept an individual certificate of deposit in an amount in excess of $100,000 or the maximum insurable amount as determined by the Federal Deposit Insurance Corporation.

10.2.4. An irrevocable letter of credit.

10.2.4.1. Letters of credit shall be placed in the possession of and payable upon demand only to the division.

10.2.4.2. Letters of credit shall be issued by a federally insured bank authorized to do business in Utah.

10.2.4.3. Letters of credit shall be irrevocable during their terms.

10.2.4.4. Letters of credit shall be automatically renewable or the operator shall ensure continuous bond coverage by replacing letters of credit, if necessary, at least 30 days before their expiration date with other acceptable bond types or letters of credit.

11. The required bond amount specified in subsections 5. and 6. of all collateral posted as assurance under this section shall be subject to a margin determined by the division which is the ratio of the face value of the collateral to market value, as determined by the division.

11.1. The margin shall reflect legal and liquidation fees, as well as value depreciation, marketability and fluctuations which might affect the net cash available to the division to complete plugging and restoration.

12. The market value of collateral may be evaluated at any time, and in no case shall the market value of collateral be less than the required bond amount specified in subsections 5. and 6.

12.1. Upon evaluation of the market value of collateral by the division, the division will notify the operator of any required changes in the amount of the bond and shall allow a reasonable period, not to exceed 90 days, for the operator to establish acceptable bond coverage.

12.2. If an adequate bond is not furnished within the allowed period the operator shall be required to cease operations immediately and shall not resume operations until the division has received an acceptable bond.

13. Persons with an interest in collateral posted as a bond, and who desire notification of actions pursuant to the bond, shall request the notification in writing from the division at the time collateral is offered.

14. The division may allow the operator to replace existing bonds with other bonds that provide sufficient coverage.

14.1. Replacement of a bond pursuant to this section shall not constitute a release of bond under subsection 15.

14.2. The division shall not allow liability to cease under an existing bond until the operator has furnished, and the division has approved, an acceptable replacement bond.

14.3. When the operator of wells covered by a blanket bond changes, the division will review the financial eligibility of a new operator for blanket bonding as described in subsection 6.4., and the division will make a written finding concerning the applicability of blanket bonding to the prospective new operator.

14.4. Transfer of the ownership of property does not cancel liability under an existing bond until the division reviews and approves a change of operator for any wells affected by the transfer of ownership.

14.5. If a transfer of the ownership of property is made and an operator wishes to request a change to a new operator of record for the affected wells, then the following requirements shall be met:

14.5.1. The operator shall notify the division in writing when ownership of any well associated with the property has been transferred to a named transferee, and the operator shall request a change of operator for the affected wells.

14.5.2. The request shall describe each well by reference to its well name and number, API number, and its location, as described by the section, township, range, and county,and shall also include a proposed effective date for the operator change.

14.5.3. The request shall contain the endorsement of the new operator accepting such change of operator.

14.5.4. The request shall contain evidence of the new operator's bond coverage.

14.5.5. The request may include a request to cancel liability for the well(s) included in the operator change that are listed under the existing operator's bond upon approval by the division of an adequate replacement bond in the name of the new operator.

14.6. Upon receipt of a request for change of operator, the division will review the proposed new operator's bond coverage, and if bond coverage is acceptable, the division will issue a notice of approval of the change of operator.

14.6.1. If the division determines that the new operator's bond coverage will be insufficient to cover the costs of plugging and site restoration for the applicable well(s), the division may deny the change of operator, or the division may require a change in the form and amount of the new operator's bond coverage in order to approve the change of operator. In such cases, the division will support its case for a change of the new operator's bond coverage in the form of written findings, and the division will provide a schedule for completion of the requisite changes in order to approve the operator change. The written findings and schedule for changes in bond coverage will be sent to both the operator of record of the applicable well(s) and the proposed new operator.

14.7. If the request for operator change included a request to cancel liability under the existing operator's bond in accordance with subsection 14.5.5., and the division approves the operator change, then the division will issue a notice of approval of termination of liability under the existing bond for the wells included in the operator change. When the division has approved the termination of liability under a bond, the original operator is relieved from the responsibility of plugging or repairing any wells and restoring any well site affected by the operator change.

14.8. If all of the wells covered by a bond are affected by an operator change, the bond may be released by the division in accordance with subsection15.

15. Bond release procedures are as follows:

15.1. Requests for release of a bond held by the division may be submitted by the operator at any time after a subsequent notice of plugging of a well has been submitted to the division or the division has issued a notice of approval of termination of liability for all wells covered by an existing bond.

15.1.1. Within 30 days after a request for bond release has been filed with the division, the operator shall submit signed affidavits from the surface landowner of any previously plugged well site certifying that restoration has been performed as required by the mineral lease and surface agreements.

15.1.2. If such affidavits are not submitted, the division shall conduct an inspection of the well site in preparation for bond release as explained in subsection 15.2.

15.1.3. Within 30 days after a request for bond release has been filed with the division, the division shall publish notice of the request in a daily newspaper of general circulation in the city and county of Salt Lake and in a newspaper of general circulation in the county in which the proposed well is located.

15.1.4. If a written objection to the request for bond release is not received by the division within 15 days after publication of the notice of request, the division may release liability under the bond as an administrative action.

15.1.5. If a written objection to the request for bond release is received by the division within 15 days after publication of the notice of request, the request shall be set for hearing and notice thereof given in accordance with the procedural rules of the Board.

15.2. If affidavits supporting the bond release application are not received by the division in accordance with subsection 15.1.1., the division shall within 30 days or as soon thereafter as weather conditions permit, conduct an inspection and evaluation of the well site to determine if restoration has been adequately performed.

15.2.1. The operator shall be given notice by the division of the date and time of the inspection, and if the operator is unable to attend the inspection at the scheduled date and time, the division may reschedule the inspection to allow the operator to participate.

15.2.2. The surface landowner, agent or lessee shall be given notice by the operator of such inspection and may participate in the inspection; however, if the surface landowner is unable to attend the inspection, the division shall not be required to reschedule the inspection in order to allow the surface landowner to participate.

15.2.3. The evaluation shall consider the adequacy of well site restoration, the degree of difficulty to complete any remaining restoration, whether pollution of surface and subsurface water is occurring, the probability of future occurrence of such pollution, and the estimated cost of abating such pollution.

15.2.4. Upon request of any person with an interest in bond release, the division may arrange with the operator to allow access to the well site or sites for the purpose of gathering information relevant to the bond release.

15.2.5. The division shall retain a record of the inspection and the evaluation, and if necessary and upon written request by an interested party, the division shall provide a copy of the results.

15.3. Within 60 days from the filing of the bond release request, if a public hearing is not held pursuant to subsection 15.1.5., or within 30 days after such public hearing has been held, the division shall provide written notification of the decision to release or not release the bond to the following parties:

15.3.1. The operator.

15.3.2. The surety or other guarantor of the bond.

15.3.3. Other persons with an interest in bond collateral who have requested notification under R649-3-1.13.

15.3.4. The persons who filed objections to the notice of application for bond release.

15.4. If the decision is made to release the bond, the notification specified in subsection 15.3. shall also state the effective date of the bond release.

15.5. If the division disapproves the application for release of the bond or portion thereof, the notification specified in subsection 15.3. shall also state the reasons for disapproval, recommending corrective actions necessary to secure the release, and allowing an opportunity for a public hearing.

15.6. The division shall notify the municipality in which the well is located by certified mail at least 30 days prior to the release of the bond.

16. The following guidelines will govern the Forfeiture of Bonds.

16.1. The division shall take action to forfeit the bond if any of the following occur:

16.1.1. The operator refuses or is unable to conduct plugging and site restoration.

16.1.2. Noncompliance as to the conditions of a permit issued by the division.

16.1.3. The operator defaults on the conditions under which the bond was accepted.

16.2. In the event forfeiture of the bond is necessary, the matter will be considered by the Board.

16.3. For matters of bond forfeiture, the division shall send written notification to the parties identified in subsection 15.3., in addition to the notice requirements of the Board procedural rules.

16.4. After proper notice and hearing, the Board may order the division to do any of the following:

16.4.1. Proceed to collect the forfeited amount as provided by applicable laws for the collection of defaulted bonds or other debts.

16.4.2. Use funds collected from bond forfeiture to complete the plugging and restoration of the well or wells to which bond coverage applies.

16.4.3. Enter into a written agreement with the operator or another party to perform plugging and restoration operations in accordance with a compliance schedule established by the division as long as such party has the ability to perform the necessary work.

16.4.4. Allow a surety to complete the plugging and restoration, if the surety can demonstrate an ability to complete the plugging and restoration.

16.4.5. Any other action the Board deems reasonable and appropriate.

16.5. In the event the amount forfeited is insufficient to pay for the full cost of the plugging and restoration, the division may complete or authorize completion of plugging and restoration and may recover from the operator all costs of plugging and restoration in excess of the amount forfeited.

16.6. In the event the amount of bond forfeited was more than the amount necessary to complete plugging and restoration, the unused funds shall be returned by the division to the party from whom they were collected.

16.7. In the event the bond is forfeited and there exists any unplugged well or wells previously covered under the forfeited bond, then the operator must establish new bond coverage in accordance with these rules.

16.8. If the operator requires new bond coverage under the provisions of subsection 16.7., then the division will notify the operator and specify a reasonable period, not to exceed 90 days, to establish new bond coverage.

R649-3-2. Location And Siting Of Vertical Wells and Statewide Spacing for Horizontal Wells.

1. In the absence of special orders of the board establishing drilling units or authorizing different well density or location patterns for particular pools or parts thereof, each oil and gas well shall be located in the center of a 40 acre quarter-quarter section, or a substantially equivalent lot or tract or combination of lots or tracts as shown by the most recent governmental survey, with a tolerance of 200 feet in any direction from the center location, a "window" 400 feet square. No oil or gas well shall be drilled less than 920 feet from any other well drilling to or capable of producing oil or gas from the same pool, and no oil or gas well shall be completed in a known pool unless it is located more than 920 feet from any other well completed in and capable of producing oil or gas from the same pool.

2. The division shall have the administrative authority to determine the pattern location and siting of wells adjacent to an area for which drilling units have been established or for which a request for agency action to establish drilling units has been filed with the board and adjacent to a unitized area, where there is sufficient evidence to indicate that the particular pool underlying the drilling unit or unitized area may extend beyond the boundary of the drilling unit or unitized area and the uniformity of location patterns is necessary to ensure orderly development of the pool.

3. In the absence of special orders of the Board, no portion of the horizontal interval within the potentially productive formation shall be closer than six hundred-sixty (660) feet to a drilling or spacing unit boundary, federally unitized area boundary, uncommitted tract within a unit, or boundary line of a lease not committed to the drilling of such horizontal well.

4. The surface location for a horizontal well may be anywhere on the lease.

5. Any horizontal interval shall be not closer than one thousand three hundred and twenty (1,320) feet to any vertical well completed in and producing from the same formation. Vertical wells drilled to and completed in the same formation as in a horizontal well are subject to applicable drilling unit orders of the board or the other conditions of this rule which do not specifically pertain to horizontal wells and may be drilled and produced as provided therein.

6. A temporary six hundred and forty (640) acre spacing unit, consisting of the governmental section in which the horizontal well is located, is established for the orderly development of the anticipated pool.

7. In addition to any other notice required by the statute or these rules, notice of the Application for Permit to Drill for a horizontal well shall be given by certified mail to all owners within the boundaries of the designated temporary spacing unit.

8. Horizontal wells to be located within federally supervised units are exempt from the above referenced conditions

of 5, 6 and 7.

9. Exceptions to any of the above referenced conditions of 3 through 7 may be approved upon proper application pursuant to R649-3-3, Exception to Location and Siting of Wells, or R649-10, Administrative Procedures.

10. Additional horizontal wells may be approved by order of the Board after hearing brought upon by a Request for Agency Action (Petition) filed in accordance with the Board's Procedural Rules.

R649-3-3. Exception to Location and Siting of Wells.

1. The division shall have the administrative authority to grant an exception to the locating and siting requirements of R649-3-2 or an order of the board establishing oil or gas well drilling units after receipt from the operator of the proposed well of the following items:

1.1. Proper written application for the exception well location.

1.2. Written consent from all owners within a 460 foot radius of the proposed well location when such exception is to the requirements of R649-3-2, or;

1.3. Written consent from all owners of directly or diagonally offsetting drilling units when such exception is to an order of the board establishing oil or gas well drilling units.

2. If for any reason the division shall fail or refuse to approve such an exception, the board may, after notice and hearing, grant an exception.

3. The application for an exception to R649-3-2 or board drilling unit order shall state fully the reasons why such an exception is necessary or desirable and shall be accompanied by a plat showing:

3.1. The location at which an oil or gas well could be drilled in compliance with R649-3-2 or Board drilling unit order.

3.2. The location at which the applicant requests permission to drill.

3.3. The location at which oil or gas wells have been drilled or could be drilled, in accordance with R649-3-2 or board drilling unit order, directly or diagonally offsetting the proposed exception.

3.4. The names of owners of all lands within a 460 foot radius of the proposed well location when such exception is to the requirements of R649-3-2, or

3.5. The names of owners of all directly or diagonally offsetting drilling units when such exception is to an order of the board establishing oil or gas drilling units.

4. No exception shall prevent any owner from drilling an oil or gas well on adjacent lands, directly or diagonally offsetting the exception, at locations permitted by R649-3-2, or any applicable order of the board establishing oil or gas well drilling units for the pool involved.

5. Whenever an exception is granted, the board or the division may take such action as will offset any advantage that the person securing the exception may obtain over other producers by reason of the exception location.

R649-3-4. Permitting of Wells to be Drilled, Deepened or Plugged-Back.

1. Prior to the commencement of drilling, deepening or plugging back of any well, exploratory drilling such as core holes and stratigraphic test holes, or any surface disturbance associated with such activity, the operator shall submit Form 3, Application for Permit to Drill, Deepen, or Plug Back and obtain approval. Approval shall be given by the division if it appears that the contemplated location and operations are not in violation of any rule or order of the board for drilling a well.

2. The following information shall be included as part of the complete Application for Permit to Drill, Deepen, or Plug Back.

2.1. The telephone number of the person to contact if additional information is needed.

2.2. Proper identification of the lease as state, federal, Indian, or fee.

2.3. Proper identification of the unit, if the well is located within a unit.

2.4. A plat or map, preferably on a scale of one inch equals 1,000 feet, prepared by a licensed surveyor or engineer, which shows the proposed well location. For directional wells, both surface and bottomhole locations should be marked.

2.5. A copy of the Division of Water Rights approval or the identifying number of the approval for use of water at the drilling site.

2.6. A drilling program containing the following information shall also be submitted as part of a complete APD.

2.6.1. The estimated tops of important geologic markers.

2.6.2. The estimated depths at which the top and the bottom of anticipated water, oil, gas, or other mineral-bearing formations are expected to be encountered, and the owner's or operator's plans for protecting such resources.

2.6.3. The owner's or operator's minimum specifications for pressure control equipment to be used and a schematic diagram thereof showing sizes, pressure ratings or API series, proposed testing procedures and testing frequency.

2.6.4. Any supplementary information more completely describing the drilling equipment and casing program as required by Form 3, Application for Permit to Drill, Deepen, or Plug Back.

2.6.5. The type and characteristics of the proposed circulating medium or mediums to be employed in drilling, the quantities and types of mud and weighting material to be maintained, and the monitoring equipment to be used on the mud system.

2.6.6. The anticipated type and amount of testing, logging, and coring.

2.6.7. The expected bottomhole pressure and any anticipated abnormal pressures or temperatures or potential hazards, such as hydrogen sulfide, expected to be encountered, along with contingency plans for mitigating such identified hazards.

2.6.8. Any other facets of the proposed operation which the lessee or operator desires to point out for the division's consideration of the application.

2.6.9. If an Application for Permit to Drill, Deepen, or Plug Back is for a proposed horizontal well, a horizontal well diagram clearly showing the well bore path from the surface through the terminus of the lateral shall be submitted.

2.7. Form 5, Designation of Agent or Operator shall be filed when the operator is a person other than the owner.

2.8. If located on State or Fee surface, an APD will not be approved until an Onsite Predrill Evaluation is performed as outlined in R649-3-18.

3. Two legible copies, carbon or otherwise, of the APD filed with the appropriate federal agency may be used in lieu of the forms prescribed by the board.

4. Approval of the APD shall be valid for a period of 12 months from the date of such approval. Upon approval of an APD, a well will be assigned an API number by the division. The API number should be used to identify the permitted well in all future correspondence with the division.

5. If a change of location or drilling program is desired, an amended APD shall be filed with the division and its approval obtained. If the new location is at an authorized location in the approved drilling unit, or the change in drilling program complies with the rules for that area, the change may be approved verbally or by telegraph. Within five days after obtaining verbal or telegraphic authorization, the operator shall file a written change application with the division.

6. After a well has been completed or plugged and abandoned, it shall not be reentered without the operator first submitting a new APD and obtaining the division's approval. Approval shall be given if it appears that a bond has been furnished or waived, as required by R649-3-1, Bonding, and the contemplated work is not in violation of any rule or order of the board.

7. An operator or owner who applies for an APD in an area not subject to a special order of the board establishing drilling units, may contemporaneously or subsequently file a Request for Agency Action to establish drilling units for an area not to exceed the area reasonably projected by the operator or owner to be underlaid by the targeted reservoir.

8. An APD for a well within the area covered by a proper Request for Agency Action which has been filed by an interested person, or the division or the board on its own motion, for the establishment of drilling units or the revision of existing drilling units for the spacing of wells shall be held in abeyance by the division until such time as the matter has been noticed, fully heard and determined.

9. An exception to R649-3-4-8 shall be made and a permit shall be issued by the division if an owner or operator files a sworn statement demonstrating to the division's satisfaction that on and after the date the Request for Agency Action requesting the establishment of drilling units was filed, or the action of the division or board was taken; and

9.1. The owner or operator has the right or obligation under the terms of an existing contract to drill the requested well; or

9.2. The owner or operator has a leasehold estate or right to acquire a leasehold estate under a contract that will be terminated unless he is permitted to commence the drilling of the required well before the matter can be fully heard and determined by the board.

R649-3-5. Identification.

Every drilling and producible well shall be identified by a sign posted on the derrick or in a conspicuous place near the well. The sign shall be of durable construction. The lettering on the sign shall be kept in a legible condition and shall be large enough to be legible under normal conditions at a distance of 25 feet. The wells on each lease or property shall be numbered in nonrepetitive, logical, and distinctive sequence. Each sign shall show the number of the well, the name of the owner or operator, the lease name, and the location of the well by quarter section, township, and range.

R649-3-6. Drilling Operations.

1. Drilling operations shall be conducted according to the drilling program submitted on the original APD and as approved by the division. Any change of plans to the original drilling program shall be submitted to the division by using Form 9, Sundry Notices and Reports on Wells and shall receive division approval prior to implementation. A change of plans necessary because of emergency conditions may be implemented without division approval. The operator shall provide the division with verbal notice of the emergency change within 24 hours and written notice within five days.

2. An operator of a drilling well as designated in R649-2-4 shall comply with reporting requirements as follows:

2.1. The spudding in of a well shall be reported to the division within 24 hours. The report should include the well name and number, drilling contractor, rig number and type, spud date and time, the date that continuous drilling will commence, the name of the person reporting the spud, and a contact telephone number.

2.2. The operator shall file Form 6, Entity Action Form with the division within five working days of spudding in a well. The division will assign the well an entity number which will identify the well on the operator's monthly oil and gas production and disposition reports.

2.3. The operator shall notify the division 24 hours in advance of all testing to be performed on the blowout preventor equipment on a well.

2.4. The operator shall submit a monthly status report for each drilling well on Form 9, Sundry Notices and Reports on Wells. The report should include the well depth and a description of the operations conducted on the well during the month. The report shall be submitted no later than the fifth day of the following calendar month until such time as the well is completed and the well completion report is filed.

2.5. The operator shall notify the division 24 hours in advance of all casing tests performed in accordance with R649-3-13.

2.6. The operator shall report to the division all fresh water sand encountered during drilling on Form 7, Report of Water Encountered During Drilling, The report shall be filed with Form 8, Well Completion or Recompletion Report and Log.

R649-3-7. Well Control.

1. When drilling in wildcat territory, the owner or operator shall take all reasonably necessary precautions for keeping the well under control at all times and shall provide, at the time the well is started, proper high pressure fittings and equipment. All pressure control equipment shall be maintained in good working condition at all times.

2. In all proved areas, the use of blowout prevention equipment "BOPE" shall be in accordance with the established and approved practice in the area. All pressure control equipment shall be maintained in good working condition at all times.

3. Upon installation, all ram type BOPE and related equipment, including casing, shall be tested to the lesser of the full manufacturer's working pressure rating of the equipment, 70% of the minimum internal yield pressure of any casing subject to test, or one psi/ft of the last casing string depth. Annular type BOPE are to be tested in conformance with the manufacturer's published recommendations. The operator shall maintain records of such testing until the well is completed and will submit copies of such tests to the division if required.

4. In addition to the initial pressure tests, ram and annular type preventers shall be checked for physical operation each trip. All BOPE components, with the exception of an annular type blowout preventer, shall be tested monthly to the lesser of 50% of the manufacturer's rated pressure of the BOPE, the maximum anticipated pressure to be contained at the surface, one psi/ft of the last casing string depth, or 70% of the minimum internal yield pressure of any casing subject to test.

5. If a pressure seal in the assembly is disassembled, a test of that seal shall be conducted prior to the resumption of any drilling operation. A shell test of the affected seal shall be adequate. If the affected seal is integral with the BOP stack, either pipe or blind ram, necessitating a test plug to be set in order to test the seal, the division may grant approval to proceed without testing the seal if necessary for prudent operations.

6. All tests of BOPE shall be noted on the driller's log, IADC report book, or equivalent and shall be available for examination by the director or an authorized agent during routine inspections.

7. BOPE used in possible or probable hydrogen sulfide or sour gas formations shall be suitable for use in such areas.

R649-3-8. Casing Program.

1. The method of cementing casing in the hole shall be by pump and plug method, displacement method, or other method approved by the division.

2. When drilling in wildcat territory or in any field where high pressures are probable, the conductor and surface strings of casing must be cemented throughout their lengths, unless another

procedure is authorized or prescribed by the division, and all subsequent strings of casing must be securely anchored.

3. In areas where the pressures and formations to be encountered during drilling are known, sufficient surface casing shall be run to:

3.1. Reach a depth below all known or reasonably estimated, utilizable, domestic, fresh water levels.

3.2. Prevent blowouts or uncontrolled flows.

4. The casing program adopted must be planned to protect any potential oil or gas horizons penetrated during drilling from infiltration of waters from other sources and to prevent the migration of oil, gas, or water from one horizon to another.

R649-3-9. Protection Of Upper Productive Strata.

1. No well shall be deepened for the purpose of producing oil or gas from a lower stratum until all upper productive strata are protected, either permanently by casing and cementing or temporarily through the use of tubing and packer, to the satisfaction of the division.

2. In any well that appears to have defective, poorly cemented, or corroded casing that will permit or may create underground waste or may contaminate underground or surface fresh water, the operator shall proceed with diligence to use the appropriate method and means to eliminate such hazard of underground waste or contamination of fresh water. If such hazard cannot be eliminated, the well shall be properly plugged and abandoned.

3. Natural gas that is encountered in substantial quantities in any section of a cable tool drilled hole above the ultimate objective shall be shut off with reasonable diligence, either by mudding, casing or other approved method, and shall be confined to its original source to the satisfaction of the division.

R649-3-10. Tolerances For Vertical Drilling.

Deviation from the vertical for short distances is permitted in the drilling of a well without special approval to straighten the hole, sidetrack junk, or correct other mechanical difficulties. All wells shall be drilled such that the surface location of the well and all points along the intended well bore shall be within the tolerances allowed by R649-3-2, Location and Siting of Vertical Wells and Statewide Spacing for Horizontal Wells, or the appropriate board order.

R649-3-11. Directional Drilling.

1. Except for the tolerances allowed under R649-3-10, no well may be intentionally deviated unless the operator shall first file application and obtain approval from the division. An application for directional drilling may be approved by the division without notice and hearing when the applicant is the owner of all the oil and gas within a radius of 460 feet from all points along the intended well bore, or the applicant has obtained the written consent of the owner to the proposed directional drilling program. An application for directional drilling may be included as part of the initial APD for a proposed well.

2. An application for directional drilling shall include the following information:

2.1. The name and address of the operator.

2.2. The lease name, well number, field name, reservoir name, and county where the proposed well is located.

2.3. A plat or sketch showing the distance from the surface location to section and lease lines, the target location within the intended producing interval, and any point along the intended well bore outside the 460 foot radius for which the consent of the owner has been obtained.

2.4. The reason for the intentional deviation.

2.5. The signature of designated agent or representative of operator.

3. Within 30 days following completion of a directionally drilled well, a complete angular deviation and directional survey of the well obtained by an approved well survey company shall be filed with the division, together with other regularly required reports.

R649-3-12. Drilling Practices For Hydrogen Sulfide Areas And Formations.

1. This rule shall apply to drilling, redrilling, deepening, or plugging back operations in areas where the formations to be penetrated are known to contain or are expected to contain H_2S in excess of 20 ppm and to areas where the presence or absence thereof is unknown.

2. A written contingency plan, providing details of actions to be taken to alert and protect operating personnel and members of the public in the event of an accidental release of H_2S gas shall be submitted to the division as part of the initial APD for a well or as a sundry notice.

3. All proposed drill site locations shall be planned to obtain the maximum safety benefits consistent with the rig configuration, terrain, prevailing winds, etc. The drilling rig shall, where possible, be situated so that prevailing winds blow across the rig in a direction toward the reserve pit and away from escape routes. On-site trailers shall be located to allow reasonably safe distances from both the well and the outlet of the flare line.

4. At least two cleared areas shall be designated as crew briefing or safety areas. Both areas shall be located at least 200 feet from the well, with at least one area located generally upwind from the well.

5. Protective equipment shall be provided by the operator or its drilling contractor for operating personnel and shall include the following:

5.1. An adequate number of positive pressure type self-contained breathing apparatus to allow all personnel normally involved in the drilling operation immediate access to such equipment, with a minimum of one working apparatus available for the immediate use of each rig hand in emergencies.

5.2. Chalk boards or note pads to be used for communication when wearing protective breathing apparatus.

5.3. First aid supplies.

5.4. One resuscitator complete with medical oxygen.
5.5. A litter or stretcher.
5.6. Harnesses and lifelines.
5.7. A telephone, radio, mobile phone, or other communication device that provides emergency two-way communication from a safe area at the well location.

6. Each drill site shall have an H_2S detection and monitoring system that activates audible and visible alarms when the concentration of H_2S reaches the threshold limit of 20 ppm in air. This equipment shall have a rapid response time and be capable of sensing a minimum of ten ppm H_2S in air, with at least three sensing points, located at the shale shaker, on the derrick floor, and in the cellar. Other sensing points shall be located at other critical areas where H_2S might accumulate. Portable H_2S detection equipment capable of sensing an H_2S concentration of 20 ppm shall be available for all working personnel and shall be equipped with an audible warning signal.

7. Equipment to indicate wind direction at all times shall be installed at prominent locations. At least two wind socks or streamers shall be located at separate elevations at the well location and shall be easily visible from all areas of the location. Windsocks or streamers shall be located in illuminated areas for night operations.

8. When H_2S is encountered during drilling, well marked, highly visible warning signs shall be displayed at the rig and along all access routes to the well location. The signs shall warn of the presence of H_2S and shall prohibit approach to the well location when red flags are displayed. Red flags shall be displayed when H_2S is present in concentrations greater than 20 ppm in air as measured on the equipment required under R649-3-12-6.

9. Unless adequate natural ventilation is present, portable fans or ventilation equipment shall be located in work areas to disperse H_2S when it is encountered.

10. A flare system shall be utilized to safely gather and burn H_2S bearing gas. Flare lines shall be located as far from the operating site as feasible and shall be located in a manner to compensate for wind changes. The outlets of all flare lines shall be located at least 150 feet from the well head unless otherwise approved by the division.

11. Sufficient quantities of additives shall be maintained on location to add to the mud system to scavenge or neutralize H_2S.

R649-3-13. Casing Tests.

In order to determine the integrity of the casing string set in the well, the operator shall, unless otherwise requested by the division, perform a pressure test of the casing to the pressures specified under R649-3-7-4 before drilling out of any casing string, suspending drilling operations, or completing the well.

R649-3-14. Fire Hazards On The Surface.

1. All rubbish or debris that might constitute a fire hazard shall be removed to a distance of a least 100 feet from the well location, tanks, separator, or any structure. All waste oil or gas shall be burned or disposed of in a manner to avert creation

of a fire hazard.

2. Any gas other than poisonous gas escaping from the well during drilling operations shall be, so far as practicable, conducted to a safe distance from the well site and burned in a suitable flare.

R649-3-15. Pollution And Surface Damage Control.

The operator shall take all reasonable precautions to avoid polluting lands, streams, reservoirs, natural drainage ways, and underground water. The owner or operator shall carry on all operations and maintain the property at all times in a safe and workmanlike manner having due regard for the preservation and conservation of the property and for the health and safety of employees and people residing in close proximity to those operations. At a minimum, the owner or operator shall:

1.1. Take reasonable steps to prevent and shall remove accumulations of oil or other materials deemed to be fire hazards from the vicinity of well locations, lease tanks and pits.

1.2. Remove from the property or store in an orderly manner, all scrap or other materials not in use.

1.3. Provide secure workmanlike storage for chemical containers, barrels, solvents, hydraulic fluid, and other non-exempt materials.

1.4. Maintain tanks in a workmanlike manner which will preclude leakage and provide for all applicable safety measures, and construct berms of sufficient height and width to contain the quantity of the largest tank at the storage facility. The use of crude or produced water storage tanks without tops is strictly prohibited except during well testing operations.

1.5. Catch leaks and drips, contain spills, and cleanup promptly. Waste reduction and recycling should be practiced in order to help reduce disposal volumes. Produced water, tank bottoms and other miscellaneous waste should be disposed of in a manner which is in compliance with these rules and other state, federal, or local regulations or ordinances. In general, good housekeeping practices should be used.

R649-3-16. Reserve Pits and Other Onsite Pits.

1. Small onsite oil field pits including but not limited to reserve pits, emergency pits, workover and completion pits, storage pits, pipeline drip pits, and sumps shall be located and constructed in such a manner as to contain fluids and not cause pollution of waters and soils. They shall be located and constructed according to the Division guidelines for onsite pits.

2. Reserve pit location and construction requirements including liner requirements will be discussed at the predrill site evaluation. Special stipulations concerning the reserve pit will be included as part of the Division's approval to drill.

3. Following drilling and completion of the well the reserve pit shall be closed within one year, unless permission is granted by the Division for a longer period. Pit contents shall meet the Division's Cleanup Levels (guidance document for numeric clean-up levels) or background levels prior to burial. The contents may require treatment to reduce mobility and/or toxicity in order to

meet cleanup levels. The alternative to meeting cleanup levels would be transporting of material to an appropriate disposal facility.

R649-3-17. Inspection.

Inspection of wells shall be performed by the division to determine operator compliance with the rules and orders of the board. The inspection shall not interfere with the mechanical operation of facilities or equipment used in drilling and production operations. Inspections of operations involving a safety hazard shall not be conducted, nor shall an inspection be conducted that may cause a safety hazard.

R649-3-18. On-site Predrill Evaluation.

1. An on-site predrill evaluation of drilling operations located on state or private land shall be scheduled and conducted by the division prior to approval of an APD and no later than 30 days after receipt by the division of a complete APD. An on-site predrill evaluation may be performed by the division prior to submittal of a complete APD at the written request of the operator. The division, the operator, and other persons associated with the surface management or construction of the well site shall attend the predrill evaluation. When appropriate, the operator's surveyor and archaeologist may also participate in the predrill evaluation. When the surface of the land involved is privately owned, the operator shall include in the APD the name, address, and telephone number of the private surface owner as shown on the real property records of the county where the well is located. The surface owner shall be invited by the division to attend the predrill evaluation. The surface owner's inability to attend the predrill evaluation shall not delay the scheduled evaluation.

2. Special stipulations concerning surface use or justifications for well spacing exceptions may be addressed and developed at the predrill evaluations. Special stipulations shall be incorporated as conditions of the approved APD, together with any additional conditions determined by the division to be necessary following a review of the complete application.

R649-3-19. Well Testing.

1. Each operator shall conduct a stabilized production test of at least 24 hours duration not later than 15 days following the completion or recompletion of any well for the production of oil or gas.

The results of the test shall be reported in writing to the division within 15 days after completion of the test. Additional tests shall be taken as requested by the division.

2. The division may request subsurface pressure measurements on a sufficient number of wells in any pool to provide adequate data to determine reservoir characteristics.

3. Upon written request, the division may waive or extend the time for conducting any test.

4. A gas-oil ratio "GOR" test shall be conducted not later than 15 days following the completion or recompletion of each well

in a pool which contains both oil and gas. The average daily oil production, the average daily gas production and the average GOR shall be recorded. The results of the GOR test shall be reported in writing to the division within 15 days after completion of the test. A GOR test of at least 24 hours duration shall satisfy the requirements of R649-3-19-1.

5. When the results of a multipoint test or other approved test for the determination of gas well potential have not been submitted to the division within 30 days after completion or recompletion of any producible gas well, the division may order that this test be made. All data pertinent to the test shall be submitted to the division in legible, written form within 15 days after completion of the test. The performance of a multipoint or other approved test shall satisfy the requirements of R649-3-19-1.

6. All tests of any producible gas well will be taken in accordance with the Manual of Back-Pressure Testing of Gas Wells published by the Interstate Oil Compact Commission, with necessary modifications as approved by the division.

R649-3-20. Gas Flaring Or Venting.

1. Produced gas from an oil well, also known as associated gas or casinghead gas, may be flared or vented only in the following amounts:

1.1. Up to 1,800 MCF of oil well gas may be vented or flared from an individual well on a monthly basis at any time without approval.

1.2. During the period of time allowed for conducting the stabilized production test or other approved test as required by R649-3-19, the operator may vent or flare all produced oil well gas as needed for conducting the test. The operator shall not vent or flare gas which is not necessary for conducting the test or beyond the time allowed for conducting the test.

1.3. During the first calendar month immediately following the time allowed for conducting the initial stabilized production test as required by R649-3-19.1, the operator may vent or flare up to 3,000 MCF of oil well gas without approval.

1.4. Unavoidable or short-term oil well gas venting or flaring may occur without approval in accordance with R649-3-20.4, 4.1, 4.2, and 4.3.

2. Produced gas from a gas well may be vented or flared only in the following amounts:

2.1. During the period of time allowed for conducting the stabilized production test, the multipoint test, or other approved test as required by R649-3-19, the operator may vent or flare all produced gas well gas as needed for conducting the test. The operator shall not vent or flare gas which is not necessary for conducting the tests or beyond the time allowed for conducting the tests.

2.2. Unavoidable or short-term gas well gas venting or flaring may occur without approval in accordance with R649-3-20.4, 4.1, 4.2, and 4.3.

3. If an operator desires to produce a well for the purpose of testing and evaluation beyond the time allowed by R649-3-19 and vent or flare gas in excess of the aforementioned limits of gas

venting or flaring, the operator shall make written request for administrative action by the division to allow gas venting or flaring during such testing and evaluation. The operator shall provide any information pertinent to a determination of whether marketing or otherwise conserving the produced gas is economically feasible. Upon such request and based on the justification information presented, the division may authorize gas venting or flaring at unrestricted rates for up to 30 days of testing or no more than 50 MMCF of gas vented or flared, whichever is less.

4. Once a well is completed for production and gas is being transported or marketed, the operator is allowed unavoidable or short-term gas venting or flaring without approval only in the following cases:

4.1. Gas may be vented or released from oil storage tanks or other low pressure oil production vessels unless the division determines that the recovery of such vapors is warranted.

4.2. Gas may be vented or flared from a well during periods of line failures, equipment malfunctions, blowouts, fires, or other emergencies if shutting in or restricting production from the well would cause waste or create adverse impact on the well or producing reservoir. The operator shall provide immediate notification to the division in all such cases in accordance with R649-3-32, Reporting of Undesirable Events. Upon notification, the division shall determine if gas venting or flaring is justified and specify conditions of approval if necessary.

4.3. Gas may be vented or flared from a well during periods of well purging or evaluation tests not exceeding a period of 24 hours or a maximum of 144 hours per month. The operator shall provide subsequent written notification to the division in all such cases.

5. If an operator wishes to flare or vent a greater amount of produced gas than allowed by this rule, the operator must submit a Request for Agency Action to the board to be considered as a formal board docket item. The request should include the following items:

5.1. A statement justifying the need to vent or flare more than the allowable amount.

5.2. A description of production test results.

5.3. A chemical analysis of the produced gas.

5.4. The estimated oil and gas reserves.

5.5. A description of the reinjection potential or other conservation oriented alternative for disposition of the produced gas.

5.6. A description of the amount of gas used in lease operations.

5.7. An economic evaluation supporting the operator's determination that conservation of the gas is not economically viable. The evaluation should utilize any engineering or geologic data available and should consider total well production, not just gas production, in presenting the profitability and costs for beneficial use of the gas.

5.8. Any other information pertinent to a determination of whether marketing or otherwise conserving the produced gas is economically feasible.

6. Upon review of the request for approval to vent or flare gas from a well, the board may elect to:

6.1. Allow the requested venting or flaring of gas.

6.2. Restrict production until the gas is marketed or otherwise beneficially utilized.

6.3. Take any other action the board deems appropriate in the circumstances.

7. When gas venting or flaring from a well has not been approved by the division or the magnitude and duration of venting or flaring exceeds the amounts specified in these rules or any division or board approval, then the board may issue a formal order to alleviate the noncompliance and/or require the operator to appear before the board to provide justification of such venting or flaring. The division shall notify the appropriate governmental taxing and royalty agencies of any unapproved venting or flaring and of any subsequent board action.

8. No extraction plant processing gas in Utah shall flare or vent such gas unless such venting or flaring is made necessary by mechanical difficulty of a very limited temporary nature or unless the gas vented or flared is of no commercial value. In the event of a more prolonged mechanical difficulty or in the event of plant shut-downs or curtailment because of scheduled or nonscheduled maintenance or testing operations or other reasons, or in the event a plant is unable to accept, process, and market all of the casinghead gas produced by wells connected to its system, the plant operator shall notify the division as soon as possible of the full details of such shut-down or curtailment, following which the division shall take such action as is necessary.

R649-3-21. Well Completion And Filing Of Well Logs.

1. For the purposes of this rule only, a well shall be determined to be completed when the well has been adequately worked to be capable of producing oil or gas or when well testing as required by the division is concluded.

2. Within 30 days after the completion of any well drilled or redrilled for the production of oil or gas, Form 8, Well Completion or Recompletion Report and Log, shall be filed with the division, together with a copy of the electric and radioactivity logs, if run.

3. In addition, one copy of all drillstem test reports, formation water analyses, porosity, permeability or fluid saturation determinations, core analyses and lithologic logs or sample descriptions if compiled, shall be filed with the division.

4. As prescribed under R649-2-12, Test and Surveys, the directional, deviation and/or measurement-while-drilling (MWD) survey for a horizontal well shall be filed within 30 days of being run. Such directional, deviation and/or MWD survey specifically related to well location or well bore path shall not be held confidential. Other MWD survey data which presents well log, or other geological, geophysical, or engineering information may be held confidential as provided in R649-2-11, Confidentiality of Well Log Information.

R649-3-22. Completion Into Two Or More Pools.

1. The completion of a single well into more than one pool may be permitted by submitting an application to the division and securing its approval. The application shall be submitted on Form 9, Sundry Notice and Report and shall be accompanied by an exhibit showing the location of all wells on contiguous oil and gas leases or drilling units overlying the pool. The application shall set forth all material facts involved and the manner and method of completion proposed.

2. If oil or gas is to be produced from two or more pools open to each other through the same string of casing so that commingling will take place, the application must also be accompanied by a description of the method used to account for and to allocate production from each pool so commingled.

3. The application shall include an affidavit showing that the operator has provided a copy of the application to the owners of all contiguous oil and gas leases or drilling units overlying the pool. If none of these owners file a written objection to the application within 15 days after the date the application is filed with the division, the application may be considered and approved by the division without a hearing. If a written objection is filed that cannot be resolved administratively, the application may be approved only after notice and hearing by the board.

R649-3-23. Well Workover and Recompletion.

1. Requests for approval of a notice of intention to perform a workover or recompletion shall be filed by an operator with the division on Form 9, Sundry Notices and Reports on Wells, or if the operation includes substantial redrilling, deepening, or plugging back of an existing well, on Form 3, Application for Permit to Drill, Deepen or Plug Back.

2. The division shall review the proposed workover or recompletion for conformance with the Oil and Gas Conservation General Rules and advise the operator of its decision and any necessary conditions of approval.

3. Recompletions shall be conducted in a manner to protect the original completion interval(s) and any other known productive intervals.

4. The same tests and reports are required for any well recompletion as are required following an original well completion.

5. The applicant shall file a subsequent report of workover on Form 9, Sundry Notices and Reports, or a subsequent report of recompletion on Form 8, Well Completion or Recompletion Report and Log, within 30 days after completing the workover or recompletion operations.

6. For the purpose of qualifying for a tax credit under Utah Code Ann. Section 59-5-102(3), the operator on his behalf and on behalf of each working interest owner must file a request with the division on Form 15, Designation of Workover or Recompletion. The request must be filed within 90 days after completing the workover or recompletion operations.

7. A workover which may qualify under Utah Code Ann. Section 59-5-102(3) shall be downhole operations conducted to maintain, restore or increase the producibility or serviceability of a well

in the geologic interval(s) that the well is currently completed in, but shall not include:

7.1. Routine maintenance operations such as pump changes, artificial lift equipment or tubing repair, or other operations which do not involve changes to the wellbore configuration or the geologic interval(s) that it penetrates and which do not stimulate production beyond that which would be anticipated as the result of routine maintenance.

7.2. Operations to convert any well for use as a disposal well or other use not associated with enhancing the recovery of hydrocarbons. Operations to convert a well to a Class II injection well for enhanced recovery purposes may qualify if the secondary or enhanced recovery project has received the necessary board approval.

8. A recompletion which may qualify under Utah Code Ann. Section 59-5-102(3) shall be downhole operations conducted to reestablish producibility or serviceability of a well in any geologic interval(s).

9. The division shall review the request for designation of a workover or recompletion and advise the operator and the State Tax Commission of its decision to approve or deny the operations for the purposes of Utah Code Ann. Section 59-5-102(3).

10. The division is responsible for approval of workover and recompletion operations which qualify for the tax credit. If the operator disagrees with the decision of the division, the decision may be appealed to the board. Appeals of all other workover and recompletion tax credit decisions should be made to the State Tax Commission.

R649-3-24. Plugging And Abandonment Of Wells.

1. Before operations are commenced to plug and abandon any well the owner or operator shall submit a notice of intent to plug and abandon to the division for its approval. The notice shall be submitted on Form DOGM-5, Sundry Notice and Report on Wells. A legible copy of a similar report and form filed with the appropriate federal agency may be used in lieu of the forms prescribed by the board. In cases of emergency the operator may obtain verbal or telegraphic approval to plug and abandon. Within five days after receiving verbal or telegraphic approval, the operator shall submit a written notice of intent to plug and abandon on Form 9.

2. Both verbal and written notice of intent to plug and abandon a well shall contain the following information.

2.1. The location of the well described by section, township, range, and county.

2.2. The status of the well, whether drilling, producing, injecting or inactive.

2.3. A description of the well bore configuration indicating depth, casing strings, cement tops if known, and hole size.

2.4. The tops of known geologic markers or formations.

2.5. The plugging program approved by the appropriate federal agency if the well is located on federal or Indian land.

2.6. An indication of when plugging operations will commence.

3. A dry or abandoned well must be plugged so that oil, gas, water, or other substance will not migrate through the well bore from one formation to another. Unless a different method and procedure is approved by the division, the method and procedure for plugging the well shall be as follows:

3.1. The bottom of the hole shall be filled to, or a bridge shall be placed at, the top of each producing formation open to the well bore, and a cement plug not less than 100 feet in length shall be placed immediately above each producing formation open to the well bore.

3.2. A solid cement plug shall be placed from 50 feet below a fresh water zone to 50 feet above the fresh water zone, or a 100 foot cement plug shall be centered across the base of the fresh water zone and a 100 foot plug shall be centered across the top of the fresh water zone.

3.3. At least ten sacks of cement shall be placed at the surface in a manner completely plugging the entire hole. If more than one string of casing remains at the surface, all annuli shall be so cemented.

3.4. The interval between plugs shall be filled with noncorrosive fluid of adequate density to prevent migration of formation water into or through the well bore.

3.5. The hole shall be plugged up to the base of the surface string with noncorrosive fluid of adequate density to prevent migration of formation water into or through the well bore, at which point a plug of not less than 50 feet of cement shall be placed.

3.6. Any perforated interval shall be plugged with cement and any open hole porosity zone shall be adequately isolated to prevent migration of fluids.

3.7. A cement plug not less than 100 feet in length shall be centered across the casing stub if any casing is cut and pulled, a second plug of the same length shall be centered across the casing shoe of the next larger casing.

4. An alternative method of plugging required under a federal or Indian lease, will be accepted by the division.

5. Within 30 days after the plugging of any well has been accomplished, the owner or operator shall file a subsequent report of plugging with the division. The report shall give a detailed account of the following items:

5.1. The manner in which the plugging work was carried out, including the nature and quantities of materials used in plugging and the location, nature, and extent by depths, of the plugs.

5.2. Records of any tests or measurements made.

5.3. The amount, size, and location, by depths of any casing left in the well.

5.4. A statement of the volume of mud fluid used.

5.5. A complete report of the method used and the results obtained, if an attempt was made to part any casing.

6. Upon application to and approval by the division, and following assumption of liability for the well by the surface owner, a well or other exploratory hole that may safely be used as a fresh water well need not be filled above the required sealing plugs set below the fresh water formation. The owner of the

surface of the land affected may assume liability for any well capable of conversion to a water well by sending a letter assuming such liability to the division and by filing an application with and obtaining approval for appropriation of underground water from the Division of Water Rights.

7. Unless otherwise approved by the division, all abandoned wells shall be marked with a permanent monument showing the well number, location, and name of the lease. The monument shall consist of a portion of pipe not less than four inches in diameter and not less than ten feet in length, of which four feet shall be above the ground level and the remainder shall be securely embedded in cement. The top of the pipe must be permanently sealed.

8. If any casing is to be pulled after a well has been abandoned, a notice of intent to pull casing must be filed with the division and its approval obtained before the work is commenced. The notice shall include full details of the contemplated work. If a log of the well has not already been filed with the division, the notice shall be accompanied by a copy of the log showing all casing seats as well as all water strata and oil and gas shows. Where the well has been abandoned and liability has been terminated with respect to the bond previously furnished under R649-3-1, a $10,000 plugging bond shall be filed with the division by the applicant.

R649-3-25. Underground Disposal Of Drilling Fluids.

1. Operators shall be permitted to inject and dispose of reserve pit drilling fluids downhole in a well upon submitting an application for such operations to the division and obtaining its approval. Injection of reserve pit fluids shall be considered by the division on a case-by-case basis.

2. Each proposed injection procedure will be reviewed by the division for conformance to the requirements and standards for permitting disposal wells under R649-5-2 to assure protection of fresh-water resources.

3. The subsurface disposal interval shall be verified by temperature log, or suitable alternative, during the disposal operation.

4. The division shall designate other conditions for disposal, as necessary, in order to ensure safe, efficient fluid disposal.

R649-3-26. Seismic Exploration.

1. Form 1, Application for Permit to Conduct Seismic Exploration shall be submitted to the division by the seismic contractor at least seven days prior to commencing any type of seismic exploration operations. In cases of emergency, approval may be obtained either verbally or by telegraphic communication. Changes of plans or line locations may be implemented in an emergency situation without division approval. Within five days after the change is performed, the seismic contractor shall submit written notice of the change to the division.

1.1 The permit may be revoked at any time by the division for failure to comply with the rules and orders of the board.

1.2. Any request to deviate from the general plugging and operations procedures of these rules shall be included on the permit application.

1.3. The name, address, and telephone number of the seismic contractor's local contact shall be submitted to the division as soon as determined if not available when the permit application is submitted.

1.4. After review of the application for a seismic permit, the division may require written permission of the owner of the surface of the affected land if it is determined that the seismic operation may significantly impact any building, pipeline, water well, flowing spring, or other cultural or natural feature in the area.

1.5. The permit will be in effect for six months from the date of approval. The permit may be extended upon application to and approval by the division.

2. Bonding shall not be required for seismic exploration requiring the drilling of shot holes.

3. Seismic contractors shall give the division at least 24 hours advance notice of the plugging of seismic holes. The notice shall include the date and time the plugging activities are expected to commence, the name and address of the seismic contractor responsible for the holes, and, if different, the name and address of the hole plugging company.

4. Unless the seismic contractor can prove to the satisfaction of the division that another method will provide adequate protection to ground water resources and other man-made or natural features and will provide long-term land stability, the following procedures shall be required for the conduct of seismic operations and hole plugging:

4.1. Seismic contractors shall take reasonable precautions to avoid conducting shot hole operations closer than 1,320 feet to any building, pipeline, water well, flowing spring, or other cultural/natural feature, e.g., a historical monument, marker, or structure, which may be adversely affected by the seismic operations.

4.2. When nonartesian water is encountered while drilling seismic shot holes, the holes shall be filled from the bottom up with a high grade bentonite/water slurry mixture. The slurry shall have a density that is at least four percent greater than the density of fresh water and shall have a marsh funnel viscosity of at least 60 seconds per quart. The density and viscosity of the slurry are to be measured prior to adding cuttings. Cuttings not added to the slurry are to be disposed of in accordance with R649-3-26-4.6. Upon approval by the division, any other suitable plugging material commonly used in the industry may be substituted for the bentonite/water slurry as long as the physical characteristics of the substitute plugging material are at least comparable to those of the bentonite/water slurry. The hole shall be filled with the substitute plugging material from the bottom up to a depth of three feet below ground level. A nonmetallic permaplug shall be set at a depth of three feet. The remaining hole shall be filled and tamped to the surface with cuttings and native soil. The permaplug shall be imprinted with an approved identification number or mark.

4.3. When drilling with air only, and in completely dry holes, plugging may be accomplished by returning the cuttings to the holes, tamping the returned cuttings to the depth of three feet below ground level, and setting the permaplug topped with more cuttings and soil. A small mound shall be left over the hole for settling allowance.

4.4. If artesian flow, water flowing at the surface, is encountered in the drilling of any seismic hole, cement shall be used to seal off the water flow to prevent cross-flow, erosion, or contamination of fresh water supplies. Unless severe weather conditions prevent access, the holes shall be cemented immediately. Approval may be granted to seismic operator to plug a flowing hole in another manner, if it is proved to this division that the alternate method will provide adequate protection to ground water resources and provide long term land stability. The owner of the surface of the land affected may assume liability for a seismic hole capable of conversion to a water well by sending a letter assuming such liability to the division and by filing an application with and obtaining approval for appropriation of underground water from the Division of Water Rights.

4.5. Shotholes shall be properly plugged and abandoned as soon as practical after the shot has been fired. No shothole shall be left unplugged for more than 30 days without approval of the division. Until properly plugged, shotholes shall be covered with a tin hat or other similar cover. The hats shall be imprinted with the seismic contractor's name or initials.

4.6. Any slurry, drilling fluids, or cuttings which are deposited on the surface around the seismic hole shall be raked or otherwise spread out to a height of not more than one inch above the surface, so that the growth of the natural grasses or foliage will not be impaired.

4.7. Restoration plans required by the Mined Land Reclamation Act, Chapter 8 of Title 40, or by any other surface management agency will be accepted by the division. The surface area around each seismic shothole shall be reclaimed and reseeded to its original condition insofar as such restoration is practical and is required by the surface management agency. All flagging, stakes, cables, cement, or mud sacks shall be removed from the drill site and disposed of in an acceptable manner.

5. Upon application to the division, approval may be obtained for preplugging of shotholes using coarse bentonite material or a suitable alternative used in the industry. Preplugging of holes in this manner shall be performed according to the following procedures:

5.1. A sales receipt indicating proof of purchase of an adequate amount of coarse bentonite to properly plug all shotholes shall be submitted to the division upon request.

5.2. For shotholes drilled with air which are completely dry, the seismic contractor shall have the option of preplugging with the coarse bentonite material or of using an alternate plugging material under R649-3-26-4.3.

5.3. For conventionally drilled, wet holes, enough approved material shall be used to cover the initial water level, i.e., the depth of the initial water level in the hole prior to adding coarse bentonite material shall be equal to the final plug depth. An additional ten feet of approved material shall be placed above this depth and hole cuttings shall be used to fill the remainder of the hole to a depth of three feet below ground level. A nonmetallic plug imprinted with an approved identification number or mark shall be installed at this depth. The remaining three feet of hole shall be filled and tamped to the surface with cuttings and native soil. The remaining cuttings shall be raked or spread to a height not to exceed one inch above ground level.

5.4. When using heliportable drills and insufficient cuttings are available, the hole shall be preplugged with bentonite plugging material or an approved alternate material to a depth of three feet below ground level. Installation of a nonmetallic plug and filling the remainder of the hole shall be performed as required by R649-3-26-5.3.

5.5. The coarse bentonite plugging material shall have the following specifications - chemically unaltered sodium bentonite, coarse ground, three quarter inch maximum size, not more than 19% moisture content and not more than 15% inert solids by volume.

6. Form 2, Seismic Exploration Completion Report shall be submitted to the Division within 60 days after completion of each seismic exploration project. The report shall include:

Certification by the seismic contractor that all shot holes have been plugged as prescribed by the division.

R649-3-27. Multiple Mineral Development.

1. Drilling operations conducted in areas designated by the board for multiple mineral development shall comply with all rules or orders of the board for drilling, casing, cementing, and plugging except as the general rules or orders may be modified by this rule.

2. It is the policy of the division to promote the development of all mineral resources on land under its jurisdiction. Consistent with that policy, operators engaged in oil and gas operations on lands on which operators are exploring for and developing mineral resources other than oil and gas may enter into a cooperative agreement with these other operators with respect to multiple mineral development. The agreement shall define:

2.1. The extent and limits of liability when one operator, either intentionally or unintentionally, interferes with or damages the deposits of another.

2.2. The coordination of access to and development of the area.

2.3. Mitigation of surface impact including but not limited to issues pertaining to relocation of natural gas pipeline gathering and distribution systems and other surface facilities occasioned by placement of a spent shale pile; phased or coordinated surface occupancy so as to allow each operator to enjoy his respective mineral estate with the least disruption of operations and damage to the oil and gas deposits, either directly or indirectly, through waste; and limitation of oil and gas operations in areas of concentrated surface oil shale facilities.

2.4. Mitigation of subsurface impact including but not limited to issues pertaining to the interface in the underground environment of oil shale mining operations with other mineral operations.

2.5. The extent of exchange of geological, engineering, and production data.

2.6. Other cooperative efforts consistent with multiple mineral development under the rules and orders of the board pertaining to oil and gas operations, oil shale operations, and mined land reclamation.

3. The division, together with the Division of State Lands and Forestry, where applicable, shall be signatory to the agreement.

4. In the event the operators cannot agree on cooperative development of their respective mineral deposits, or having once entered into a cooperative agreement subsequently disagree on the application of the terms and provisions thereof, any operator whose oil and gas or mining operation or deposit may be adversely affected or damaged by the operations of another operator may apply to the board for, or the board may on its own motion enter an order, after notice and hearing, delineating the respective rights and obligations of all operators with respect to development of all minerals concerned.

5. After notice and hearing the board may modify its order to more effectively carry out the policies of multiple mineral development.

R649-3-28. Designated Potash Areas.

1. In any area designated as a potash area, either by the board, the Division of State Lands and Forestry or an appropriate federal agency, all wells shall be drilled, cased, cemented, and plugged in accordance with the rules and orders of the board. The following minimum requirements and definitions shall also apply to the drilling, logging, casing, and plugging operations within the Salt Section to protect against migration of oil, gas, or water into or within any formation or zone containing potash. As used in this rule, Salt Section shall mean the Paradox Salt Section of Pennsylvanian Age.

2. Any drilling media used through the Salt Section shall be such that sodium chloride is not soluble in the media at normal temperatures.

3. Gamma ray-neutron, gamma ray-sonic or other appropriate logs shall be run promptly through the Salt Section. One field copy of the log through the Salt Section shall be submitted to the division within ten days, or upon the request of the division, whichever is the earlier.

4. A directional survey shall be run from a point at least 20 feet below the Salt Section to the surface. The survey shall be filed with the division prior to completion or plugging and abandonment of the well.

5. In addition to the requirements of the R649-3-8, any casing set into or through the Salt Section shall be cemented solidly through the Salt Section above the casing shoe.

6. Any cement used in setting casing or in plugging which

comes in contact with the Salt Section shall be of such chemical composition as to avoid dissolution of the Salt Section and to provide weight, strength, and physical properties sufficient to protect uphole formations and prevent blowouts or uncontrolled flows.

7. If a well is dry, cement plugs at least 200 feet in length shall be placed across the top and the base of the Salt Section, across any oil, gas or water show, and across any potash zone. Plugs shall not be required inside a properly cemented casing string. The division shall approve the location of the plugs after examining the appropriate logs, drilling and testing records for the well. No well shall be temporarily abandoned with open hole in the Salt Section.

8. The division may inspect the drilling operations at all times, including any mining operations that may affect any drilling or producing well bores. A potash owner, if contributing by agreement to the logging and directional survey costs of a well, may inspect the well for compliance with this rule.

9. Before commencing drilling operations for oil or gas on any land within designated potash area, the operator shall furnish by registered mail, a copy of the APD, together with the plat or map required under R649-3-4, to all potash owners and lessees whose interests are within a radius of 2,640 feet of the proposed well.

10. After proper notice and hearing, the board may modify this rule for a particular well or area by requiring that greater or lesser precautions be taken to prevent the escape of oil, gas, or water from one stratum into another. The board may also expand or contract from the designated potash areas.

R649-3-29. Workable Coal Beds.

1. Prior to commencing drilling operations for oil and gas on any lands where there are mine workings, the operator shall furnish a copy of the APD, a plat or map as required under R649-3-4, and a designation of the proposed angle and direction of the well, if the well is to be deviated substantially from a vertical course, to all coal owners and lessees whose interests are within a radius of 5,280 feet of the proposed well.

2. A well penetrating one or more workable coal beds or mine workings shall be drilled to a depth and shall be of a size, to permit the placing of casing in the hole at the points and in the manner necessary to exclude all oil, gas or gas pressure from the coal bed, other than oil, gas or gas pressure originating in the coal bed.

3. Unless otherwise authorized by the division, the casing run through a coal bed shall be seated at least 50 feet into the closest impervious formation below the coal bed. The casing shall be cemented solidly through the coal bed to a height at least 50 feet into the closest impervious formation above the coal bed.

4. A directional survey or a cement bond log shall be performed and furnished to the division upon written request by the division.

5. Upon penetrating a coal bed the operator shall notify the division, in writing, before completing or plugging and abandoning

the well.

R649-3-30. Underground Mining Operations.

1. Prior to commencing drilling operations for oil and gas on any land where there are known or suspected underground mining operations, solution mining operations or surface mining operations, including solar evaporation ponds, the operator shall include in the APD or in a separate cover letter, any information known to the operator concerning the name and address of the owner or operator of the mining workings.

2. The division may, with the concurrence of the operator, change the surface location of the proposed well if there appears to be any possibility of interference between the proposed well bore and the mine workings.

R649-3-31. Designated Oil Shale Areas.

1. Designated oil shale areas are subject to the general drilling, plugging and other performance standards described in this section, except where the board has adopted, by order, specific standards for individual oil shale areas. As of June 8, 2001, the board has adopted specific standards for individual oil shale areas by board orders in Cause Nos. 190-5(b), 190-3, and 190-13. The board may adopt specific standards in other areas, or modify the above orders, in the future.

2. Lands may be designated as an oil shale area by the board, either upon its own motion, or upon the petition of an interested person following notice and hearing.

3. As used in this rule, oil shale section means the sequence of strata containing oil shale beds, including any interbedded strata not containing oil shale, consisting of the Parachute Creek Member of the Green River Formation of Tertiary Age, defined as the stratigraphic equivalent of the interval between 1,428 feet and 2,755 feet below the Kelly Bushing on the induction-electrical log of the Ute Trail No. 10 well drilled by Dekalb Agricultural Association, Inc. and located in the NE 1/4 of Section 34, Township 9 South, Range 21 East, S.L.M., Uintah County, Utah.

The Mahogany Zone is defined as the stratigraphic equivalent of the interval between 2,230 feet and 2,360 feet below the Kelly Bushing on the induction-electrical log of the Ute Trail No. 10 well drilled by Dekalb Agricultural Association, Inc., and located in the NE 1/4 of Section 34, Township 9 South, Range 21 East, S.L.M., Uintah County, Utah.

4. For purposes of identifying the oil shale intervals, an appropriate electrical log shall be run through the oil shale section. One field copy of the log through the oil shale section shall be made available to the division pursuant to R649-3-23 or upon written request by the division.

5. On all wells which are intentionally deviated from the vertical within the oil shale section, pursuant to the provisions of R649-3-10 and R649-3-11, a directional survey shall be run from a point at least 20 feet below the oil shale section to the surface and shall thereafter be filed with the division within 20 days after reaching total depth.

6. Any oil shale lessee or operator whose oil shale mine

workings reach a distance of 2,640 feet from a producing well or any oil and gas lessee or operator whose producing well is approached by oil shale mine workings within a distance of 2,640 feet shall request agency action with the board. The board may promulgate an order after notice and hearing with respect to the running of a directional survey through the oil shale section, the cost and potential resource loss liability and responsibility as to the oil and gas operator and the oil shale lessee or operator and any other issues regarding multiple mineral development.

7. The directional survey shall be the confidential property of the parties paying for the survey and shall be kept confidential until released by said parties or the division.

8. In addition to the requirements pertaining to the cementing of casing contained in the R649-3-8, any casing set into or through the oil shale section shall be cemented over the entire oil shale section.

9. If a well is dry, junked or abandoned, a cement plug shall be placed across that portion of the oil shale section extending 200 feet above and 200 feet below the longitudinal center of the Mahogany Zone. The cement plug shall not be required inside a casing cemented in accordance with R649-3-31-7. When the casing is cemented, cement plugs 200 feet in length shall be centered across the top and across the base of the Parachute Creek Member of the Green River Formation.

10. In the event the casing is not cemented in accordance with R649-3-31-7, the division shall approve the method and procedure to prevent the migration of oil, gas, and other substances through the wellbore from one formation to another.

11. The division shall approve the adequacy and location of the cement plugs after examining the appropriate logs and drilling and testing records for the well, to ensure that the oil shale section is adequately protected.

12. Upon written request of the owner or operator under R649-8-6, the division shall keep all well logs confidential. The division may inspect the drilling operations at all times, including any mining operations that may affect drilling or producing well bores.

13. Before commencing drilling operations for oil or gas on any land within a designated oil shale area, the operator shall furnish a copy of the APD, together with a plat or map as directed under R649-3-4, to all oil shale owners or their lessees whose interests are within a radius of 2,640 feet of the proposed well. A notice of intention to plug and abandon any well in the oil shale area, as required under R649-3-24-1, shall be furnished to the owners or their lessees prior to commencement of plugging operations.

14. The operator shall use generally accepted techniques for vertical or directional drilling as defined under R649-3-10 and R649-3-11 to maintain the well bore within an intact core of a mine pillar. Within 20 days of reaching the total depth or before completion of the well, whichever is the earlier, a directional survey shall be run as prescribed by this rule.

R649-3-32. Reporting of Undesirable Events.

1. The division shall be notified of all fires, leaks, breaks, spills, blowouts, and other undesirable events occurring at any oil or gas drilling, producing, or transportation facility, or at any injection or disposal facility.

2. Immediate notification shall be required for all major undesirable events as outlined in R649-3-32-5. Immediate notification shall mean a verbal report submitted to the division as soon as practical but within a maximum of 24 hours after discovery of an undesirable event. A complete written report of the incident shall also be submitted to the division within five days following the conclusion of an undesirable event. The requirements for written reports are specified in R649-3-32-4.

3. Subsequent notification shall be required for all minor undesirable events as outlined in R649-3-32-6. Subsequent notification shall mean a complete written report of the incident submitted to the division within five days following the conclusion of an undesirable event. The requirements for written reports are specified in R649-3-32-4.

4. Complete written reports of undesirable events may be submitted on Form 9, Sundry Notice and Report on Wells. The report shall include:

4.1. The date and time of occurrence and, if immediate notification was required, the date and time the occurrence was reported to the Division.

4.2. The location where the incident occurred described by section, township, range, and county.

4.3. The specific nature and cause of the incident.

4.4. A description of the resultant damage.

4.5. The action taken, the length of time required for control or containment of the incident, and the length of time required for subsequent cleanup.

4.6. An estimate of the volumes discharged and the volumes not recovered.

4.7. The cause of death if any fatal injuries occurred.

5. Major undesirable events include the following:

5.1. Leaks, breaks or spills of oil, salt water or oil field wastes which result in the discharge of more than 100 barrels of liquid, which are not fully contained on location by a wall, berm, or dike.

5.2. Equipment failures or other accidents which result in the flaring, venting, or wasting of more than 500 Mcf of gas.

5.3. Any fire which consumes the volumes of liquid or gas specified in R649-3-32-5.1 and R649-3-32-5.2.

5.4. Any spill, venting, or fire, regardless of the volume involved, which occurs in a sensitive area stipulated on the approval notice of the initial APD for a well, e.g., parks, recreation sites, wildlife refuges, lakes, reservoirs, streams, urban or suburban areas.

5.5. Each accident which involves a fatal injury.

5.6. Each blowout, loss of control of a well.

6. Minor undesirable events include the following:

6.1. Leaks, breaks or spills or oil, salt water, or oil field wastes which result in the discharge of more than ten barrels of liquid and are not considered major events in R649-3-

32-5.

6.2 Equipment failures or other accidents which result in the flaring, venting or wasting of more than 50 Mcf of gas and are not considered major events in R649-3-32-5.

6.3. Any fire which consumes the volumes of liquid or specified in R649-3-32-6.1 and R649-3-32-6.2.

6.4. Each accident involving a major or life-threatening injury.

R649-3-33. Drilling Procedures in the Great Salt Lake.

1. For all drilling activities proposed within the Great Salt Lake, the APD required by R649-3-4 shall be filed at least 30 days prior to the date on which the operator intends to commence operations. As part of the APD, the operator shall include:

1.1. The name of the drilling contractor and the number and type of rig to be used.

1.2. An illustration of the boundaries of all state or federal parks, wildlife refuges, or waterfowl management areas within one mile of the proposed well location.

1.3. An illustration of the locations of all evaporation pits, producing wells, structures, buildings, and platforms within one mile of the proposed well location.

1.4. An oil spill emergency contingency plan.

2. Unless permitted by the board after notice and hearing, no well shall be drilled which has a surface location:

2.1. Within 1,320 feet from an evaporation pit without the consent of the operator of such pit.

2.2. Within one mile from the boundary of a state or federal park, wildlife refuge, or waterfowl management area without the consent of the appropriate state or federal regulatory agency.

2.3. Within three miles of Gunnison Island during the Pelican nesting season (March 15 through September 30) or within one mile from said island at any other time.

2.4. Within any area south of the Salt Lake Base Meridian Line.

2.5. Within any area north of Township 10 North.

2.6. Within one mile inside of what would be the water's edge if the water level of the Great Salt Lake were at the elevation of 4,193.3 feet above sea level.

3. Well casing and cementing shall be subject to the following special requirements for the purpose of this rule, the several casing strings in order of normal installation are drive or structural casing, conductor casing, surface casing, intermediate casing, and production casing. All depths refer to true vertical depth:

3.1. The drive or structural casing shall be set by drilling, driving or jetting to a minimum depth of 50 feet below the floor of the lake bed or to such greater depth required to support unconsolidated deposits and to provide hole stability for initial drilling operations. If drilled in, the drilling fluid shall be a type that will not pollute the lake; in addition, a quantity of cement sufficient to fill the annular space back to the lake floor with returns circulated, must be used.

3.2. The conductor casing shall be set at a minimum depth of

200 feet below the floor of the lake, and shall be cemented with a quantity sufficient to fill the annular space back to the lake surface with returns circulated.

3.3. The surface casing shall be set at a minimum depth of 500 feet if the proposed depth of the well is less than 7,000 feet; or 1,000 feet if the proposed depth is over 7,000 feet but less than 11,000 feet; or 1,500 feet if the depth is 11,000 feet. The casing shall be cemented with a quantity sufficient to fill the annular space back to the lake surface with returns circulated, and the bottom of the casing shall be in competent rock.

3.4. The intermediate and production casing shall be set at any time when drilling below the surface casing and hole conditions justify setting casing. This casing will be cemented in such a manner that all hydrocarbons, water aquifers, lost-circulation or zones of significant porosity and permeability, significant beds containing priority minerals, and abnormal pressure intervals are covered or isolated.

3.5. Prior to drilling the plug after cementing, all casing strings except the drive or structural casing, shall be pressure tested. This test shall not exceed the rated working pressure of the casing. If the pressure declines more than ten percent in 30 minutes, or if there are other indications of a leak, corrective measures must be taken until a satisfactory test is obtained. All casing pressure tests shall be recorded on the driller's log.

4. Blowout preventers and related well control equipment shall be installed, and tested in a manner necessary to prevent blowouts and shall be subject to the following special conditions:

4.1. Prior to drilling below the surface casing, blowout prevention equipment shall be installed and maintained ready for use until drilling operations are completed.

4.2. An inside blowout preventer assembly and a full opening string safety valve in the open position shall be maintained on the rig floor at all times while drilling operations are being conducted. Valves shall be maintained on the rig floor to fit all pipe in the drill string. A top kelly cock shall be installed below the swivel and another at the bottom of the kelly of such design that it can be run through the blowout preventers.

4.3. Before drilling below the surface casing the blowout prevention equipment shall include a minimum of:

4.3.1. Three remotely and manually controlled, hydraulically operated blowout preventers with a rated working pressure which exceeds the maximum anticipated surface pressure, including one equipped with pipe rams, one with blind rams and one hydril type.

4.3.2. A drilling spool with side outlets, if side outlets are not provided in the blowout preventer body.

4.3.3. A choke manifold.

4.3.4. A kill line.

4.3.5. A fill-up line.

4.4. Ram-type blowout preventers and related control equipment shall be tested to the rated working pressure of the stack assembly or to the working pressure of the casing, whichever is the lesser, at the following times:

4.4.1. When installed.

4.4.2. Before drilling out after each string of casing is set.

4.4.3. Not less than once each week while drilling.

4.4.4. Following repairs that require disconnecting a pressure seal in the assembly.

4.5. The hydril-type blowout preventer shall be tested to 70 percent of the pressure testing requirements of ram-type blowout preventers. The hydril-type blowout preventer shall be actuated on the drill pipe once each week.

4.6. Accumulators or accumulators and pumps shall maintain a reserve capacity at all times to provide for repeated operation of hydraulic preventers.

4.7. A blowout prevention drill shall be conducted weekly for each drilling crew to insure that all equipment is operational and that crews are properly trained to carry out emergency duties. All blowout preventer tests and crew drills shall be recorded on the driller's log.

5. The characteristics and use of drilling mud and the conduct of related drilling procedures shall be such as are necessary to maintain the well in a safe condition to prevent uncontrolled blowouts of any well. Quantities of mud materials sufficient to insure well control shall be maintained and readily accessible for use at all times.

6. Mud testing equipment shall be maintained on the derrick floor at all times, and mud tests consistent with good operating practice shall be performed daily, or more frequently as conditions warrant. The following mud system monitoring equipment must be installed, with derrick floor indicators, and used throughout the period of drilling after setting and cementing the surface casing:

6.1. A recording mud pit level indicator including a visual and audio warning device to determine mud pit volume gains and losses.

6.2. A mud return indicator to determine when returns have been obtained, or when they occur unintentionally, and additionally to determine that returns essentially equal the pump discharge rate.

7. In the conduct of all oil and gas operations, the operator shall prevent pollution of the waters of the Great Salt Lake. The operator shall comply with the following pollution prevention requirements:

7.1. Oil in any form, liquid or solid wastes containing oil, shall not be disposed of into the waters of the lake.

7.2. Liquid or solid waste materials containing substances which may be harmful to aquatic life or wildlife, or injurious in any manner to life and property, or which in any way unreasonably adversely affects the chemicals or minerals in the lake shall not be disposed of into the waters of the lake.

7.3. Waste materials, exclusive of cuttings and drilling media, shall be transported to shore for disposal.

8. All spills or leakage of oil and liquid or solid pollutants shall be immediately reported to the division. A complete written statement of all circumstances, including subsequent clean-up operation, shall be forwarded to said agencies

within 72 hours of such occurrences.

9. Standby pollution control equipment consistent with the state of the art, shall be maintained by, and shall be immediately available to, each operator.

R649-3-34. Well Site Restoration.

1. The operator of a well shall upon plugging and abandonment of the well restore the well site in accordance with these rules.

2. For all land included in the well site for which the surface is federal, Indian, or state ownership, the operator shall meet the well site restoration requirements of the appropriate surface management agency.

3. For all land included in the well site for which the surface is fee or private ownership, the operator shall meet the well site restoration requirements of the private landowner or the minimum well site restoration requirements established by the division.

4. Well site restoration on lands with fee or private ownership shall be completed within one (1) year following the plugging of a well unless an extension is approved by the division for just and reasonable cause.

5. These rules shall not preclude the opportunity for a private landowner to assume liability for the well as a water well in accordance with R649-3-24.6.

6. The operator shall make a reasonable effort to establish surface use agreements with the owners of land included in the well site prior to the commencement of the following actions on fee or private surface:

6.1 Drilling a new well.

6.2. Reentering an abandoned well.

6.3. Assuming operatorship of existing wells.

7. Upon application to the division to perform any of the aforementioned and prior to approval of such actions by the division, the operator shall submit an affidavit to the division stating whether appropriate surface use agreements have been established with and approved by the surface landowners of the well site.

8. If necessary and upon request by the division, the operator shall submit a copy of the established surface use agreements to the division.

9. If no surface use agreement can be established, the division shall establish minimum well site restoration requirements for any well located on fee or private surface for the purposes of final bond release.

10. Established surface use agreements may be modified or terminated at any time by mutual consent of the involved parties; however, the operator shall notify the division if such is the case and if a surface use agreement is terminated without a new agreement established, the division shall establish minimum well site reclamation requirements.

11. The operator shall be responsible for meeting the requirements of any surface use agreement, and it shall be assumed by the division until notified otherwise that surface use

agreements remain in full force and effect until all the requirements of the agreement are satisfied or until the agreement has been terminated by mutual consent of the involved parties.

12. The surface use agreement shall stipulate the minimum well site restoration to be performed by the operator in order to allow final release of the bond.

13. The final bond release by the division shall include a determination by the division whether or not the operator has met the requirements of an established surface use agreement, and the division may suspend final bond release until the operator has completed all the requirements of the surface use agreement.

14. The agreement may state requirements for well site grading, contouring, scarification, reseeding, and abandonment of any equipment or facilities for which the landowner agrees to assume liability.

15. The agreement shall not address operations regulated by the rules and orders of the board such as:

15.1. Disposal of drilling fluid, produced fluid, or other fluid waste associated with the drilling and production of the well.

15.2. Reclamation or treating of waste crude oil.

15.3. Any other operation or condition for which the board has jurisdiction.

16. If the operator cannot establish surface use agreements then the operator shall so notify the division.

17. Within 30 days of the notification or as soon as weather conditions permit, the division shall conduct an inspection and evaluation of the well site in order to establish minimum well site restoration requirements for the purpose of final bond release.

18. The operator shall be given notice by the division of the date and time of the inspection, and if the operator cannot attend the inspection at the scheduled date and time, the division may reschedule the inspection to allow the operator to participate.

19. The surface landowner, agent or lessee shall be given notice by the operator of such inspection and may participate in the inspection; however, if the surface landowner cannot attend the inspection, the division shall not be required to reschedule the inspection in order to allow the surface landowner to participate.

20. The evaluation shall consider the condition of the land prior to disturbance, the extent of proposed disturbance, the degree of difficulty to conduct complete restoration, the potential for pollution, the requirements for abating pollution, and the possible land use after plugging and restoration are completed.

21. Within 30 days after performing the inspection, the division shall provide the operator with the results of the inspection and the evaluation listing the minimum well site restoration requirements established by the division.

22. The division shall retain a record of the inspection and the evaluation, and if necessary and upon written request by an interested party, the division shall provide a copy of the minimum

well site restoration requirements established by the division.

23. If any person disagrees with the results of the inspection and the evaluation and desires a reconsideration of the minimum well site restoration requirements established by the division, such person may submit a request to the board for a hearing and order to modify the requirements.

24. The board, after proper notice and hearing, may issue an order modifying the minimum well site restoration requirements established by the division.

25. The minimum well site restoration requirements established by the division or by board order shall be considered part of any permit granted by the division to conduct operations at a well site, and the inability of the operator to meet such requirements shall be considered grounds for forfeiture of the bond.

26. If the minimum well site restoration requirements suggest to the division that bond coverage for a well should be increased, the division shall take action as stated in R649-3-1.

R649-3-35. Wildcat Wells.

1. For purposes of qualifying for a severance tax exemption under Section 59-5-102(2)(d), an operator must file an application with the division for designation of a wildcat well. The application may be filed prior to drilling the well, and a tentative determination of the wildcat designation will be issued at that time. An application or request for final designation of wildcat status as appropriate, must be filed at the time of filing of Form 8, Well Completion or Recompletion Report and Log. The application shall contain, where applicable, the following information:

1.1. A plat map showing the location of the well in relation to producing wells within a one mile radius of the wellsite.

1.2. A statement concerning the producing formation or formations in the wildcat well and also the producing formation or formations of the producing wells in the designated area, including completion reports and other appropriate data.

1.3. Stratigraphic cross sections through the producing wells in the designated area and the proposed wildcat well.

1.4. A statement as to whether the well is in a known geologic structure. However, whether the well is in a known geologic structure shall not be the sole basis of determining whether the well is a wildcat.

1.5. Bottomhole pressures, as applicable, in a wildcat well compared to the wells producing in the designated area from the same zone.

1.6. Any other information deemed relevant by the applicant or requested by the division.

2. Information derived from well logs, including certain information in completion reports, stratigraphic cross sections, bottomhole pressure data, and other appropriate data provided in R649-3-35-1 will be held confidential in accordance with R649-2-11 at the request of the operator.

3. The division shall review the submitted information and advise the operator and the State Tax Commission of its decision

regarding the wildcat well designation as related to Section 59-5-102(2)(d).

4. The division is responsible for approval of a request for designation of a well as a wildcat well. If the operator disagrees with the decision of the division, the decision maybe appealed to the board. Appeals of all other tax-related decisions concerning wildcat wells should be made to the State Tax Commission.

R649-3-36. Shut-in and Temporarily Abandoned Wells.

1. Wells may be initially shut-in or temporarily abandoned for a period of twelve (12) consecutive months. If a well is to be shut-in or temporarily abandoned for a period exceeding twelve (12) consecutive months, the operator shall file a Sundry Notice providing the following information:

1.1. Reasons for shut-in or temporarily abandonment of the well,

1.2. The length of time the well is expected to be shut-in or temporarily abandoned, and

1.3. An explanation and supporting data if necessary, for showing the well has integrity, meaning that the casing, cement, equipment condition, static fluid level, pressure, existence or absence of Underground Sources of Drinking Water and other factors do not make the well a risk to public health and safety or the environment.

2. After review the Division will either approve the continued shut-in or temporarily abandoned status or require remedial action to be taken to establish and maintain the well's integrity.

3. After five (5) years of nonactivity or nonproductivity, the well shall be plugged in accordance with R649-3-24, unless approval for extended shut-in time is given by the Division upon a showing of good cause by the operator.

4. If after a five (5) year period the well is ordered plugged by the Division, and the operator does not comply, the operator shall forfeit the drilling and reclamation bond and the well shall be properly plugged and abandoned under the direction of the Division.

R649-3-37. Enhanced Recovery Project Certification.

1. In order for incremental production achieved from an enhanced recovery project to qualify for the severance tax rate reduction provided under Subsection 59-5-102(4), the operator on behalf of the producers shall present evidence demonstrating that the recovery technique or techniques utilized qualify for an enhanced recovery determination and the Board must certify the project as an enhanced recovery project.

2. For enhanced recovery projects certified by the Board after January 1, 1996:

2.1. As part of the process of certifying incremental production which qualifies for a reduction in the severance tax rate under Subsection 59-5-102(4), the operator shall furnish the Division an extrapolation (projection) and tabulation of expected non-enhanced recovery of oil and gas production from the project.

The projection shall be for not less than seventy-two (72) months commencing with the first month following the project certification by the Board. The projection shall be based on production history of all wells within the project area for not less than twelve (12) months immediately preceding either certification or commencement of the project; reservoir and production characteristics; and the application of generally accepted petroleum engineering practices. The projected production volumes approved by the division shall serve as the base level production for purposes of determining the incremental oil and gas production which qualifies for a reduction in the severance tax rate.

2.2. The operator shall provide a statement as to all assumptions made in preparing the projection and any other information concerning the project that the division may reasonably require in order to evaluate the operator's projection.

2.3. An operator's request for incremental production certification may be approved administratively by the Director or authorized agent. The Director or authorized agent shall review the request within 30 days after its receipt and advise the operator of the decision. If the operator disagrees with the Director or authorized agent's decision, the operator may request a hearing before the Board at its next regularly scheduled hearing. The Director or authorized agent may also refer the matter to the Board if a decision is in doubt.

2.4. Upon approval of a request for incremental production certification, the Director or authorized agent shall forward a copy of the certification to the Utah Tax Commission.

KEY: oil and gas law
July 1, 2003 **40-6-1 et seq.**
Notice of Continuation March 26, 2002

R649. Natural Resources; Oil, Gas and Mining; Oil and Gas.
R649-4. Determination of Well Categories Under the Natural Gas Policy Act of 1978.
R649-4-1. Definitions.

1. Unless the context specifically requires otherwise, any special words, terms, or phrases used in the Section and not defined in Section 1 have the meanings defined under the Natural Gas Policy Act of 1978 (NGPA), and applicable Federal Energy Regulatory Commission (FERC) rules and regulations.

R649-4-2. Applications.

An operator requesting the classification of a well or reservoir pursuant to the authority granted to the Board by Section 503 of the NGPA, in order to enable the Board to determine the applicable category for any such well or reservoir pursuant to Title 1 of the NGPA, shall:

1. File the original and two copies of a written application made upon forms prescribed by the Board together with supporting documentation, including all information, data, forms, plats, maps, exhibits, and evidence as may be required by the applicable

statutes, rules, and regulations. An application may be amended, supplemented, or withdrawn by the applicant at any time prior to the Board determination.

1.1. Complete an individual application as to each well for which a status determination is being requested. If more than one status determination is being requested for a single well, all forms and information required for each requested determination shall be submitted jointly under one application, with notice to the Board that multiple determinations for one well are being sought under the application.

1.2. File an affidavit as to the truthfulness and correctness of all information contained in the application, including all documents, testimony, and evidence attached to or submitted with the application.

1.3. Certify that the purchaser and owners of the natural gas for which the determination is being submitted, have been served by personal delivery or by mail, postage prepaid, with a copy of the application, including a complete FERC Form 121, excluding required supporting documents.

R649-4-3. Notice and Hearing.

1. Upon receipt of an application for a well status determination under the NGPA, the Board shall:

1.1. Notify the applicant of the receipt of the application;

1.2. Determine the completeness of the application. If the application is incomplete in any respect, the Board shall indicate to the applicant the items to be filed which would make the application complete;

1.3. Assign a cause number to each application, determine a hearing date for each complete application, and notify the applicant of the cause number and hearing date;

1.4. Cause notice of hearing to be given.

2. If the same applicant has filed for multiple well determinations or for multiple determinations as to any well, the published notice of hearing may include more than one well or reservoir in one notice.

R649-4-4. Determination and Orders.

1. Following notice and hearing, the Board shall issue a determination and order for each complete application.

2. If no response or protest to the application is filed with the Board, an application may be considered and a determination may be made by the Director or a designated hearing examiner on the basis of sworn testimony, depositions, or affidavits, together with all exhibits, forms, and other matters properly filed with the Board. Such matters shall comprise the transcript of the hearing on which the determination is based.

3. An applicant may also request consideration and a determination by the Director or a designated hearing examiner by filing a letter with the Board agreeing that the determination can be made by the Director without the necessity of an appearance by the applicant. The Board may, however, upon its own motion, require an evidentiary hearing with sworn testimony to be held upon any application following proper notice. In the event the

Board determines that a hearing is required, the Board shall notify the applicant at least ten days prior to the scheduled hearing date.

R649-4-5. Notice of Determination.

Within five days after the last day for filing a motion for rehearing, or, if such a motion is filed, within 15 days after it is denied or overruled by operation of law, the Board shall give written notice to the FERC of its determination and order.

KEY: oil and gas law
January 3, 2001 40-6-1 et seq.

R649. Natural Resources; Oil, Gas and Mining; Oil and Gas.
R649-5. Underground Injection Control of Recovery Operations and Class II Injection Wells.
R649-5-1. Requirements For Injection Of Fluids Into Reservoirs.

1. Operations to increase ultimate recovery, such as cycling of gas, the maintenance of pressure, the introduction of gas, water or other substances into a reservoir for the purpose of secondary or other enhanced recovery or for storage and the injection of water into any formation for the purpose of water disposal shall be permitted only by order of the board after notice and hearing.

2. A petition for authority for the injection of gas, liquefied petroleum gas, air, water, or any other medium into any formation for any reason, including but not necessarily limited to the establishment of or the expansion of waterflood projects, enhanced recovery projects, and pressure maintenance projects shall contain:

2.1. The name and address of the operator of the project.

2.2. A plat showing the area involved and identifying all wells, including all proposed injection wells, in the project area and within one-half mile radius of the project area.

2.3. A full description of the particular operation for which approval is requested.

2.4. A description of the pools from which the identified wells are producing or have produced.

2.5. The names, description and depth of the pool or pools to be affected.

2.6. A copy of a log of a representative well completed in the pool.

2.7. A statement as to the type of fluid to be used for injection, its source and the estimated amounts to be injected daily.

2.8. A list of all operators or owners and surface owners within a one-half mile radius of the proposed project.

2.9. An affidavit certifying that said operators or owners and surface owners within a one-half mile radius have been provided a copy of the petition for injection.

2.10. Any additional information the board may determine is necessary to adequately review the petition.

3. Applications as required by R649-5-2 for injection wells

which are located within the project area, may be submitted for board consideration and approval with the request for authorization of the recovery project.

4. Established recovery projects may be expanded and additional wells placed on injection only upon authority from the board after notice and hearing or by administrative approval.

5. If the proposed injection interval can be classified as an USDW, approval of the project is subject to the requirements of R649-5-4.

R649-5-2. Requirements For Class II Injection Wells Including Water Disposal, Storage And Enhanced Recovery Wells.

1. Injection wells shall be completed, equipped, operated, and maintained in a manner that will prevent pollution and damage to any USDW, or other resources and will confine injected fluids to the interval approved.

2. The application for an injection well shall include a properly completed UIC Form 1 and the following:

2.1. A plat showing the location of the injection well, all abandoned or active wells within a one-half mile radius of the proposed well, and the surface owner and the operator of any lands or producing leases, respectively, within a one-half mile radius of the proposed injection well.

2.2. Copies of electrical or radioactive logs, including gamma ray logs, for the proposed well run prior to the installation of casing and indicating resistivity, spontaneous potential, caliper, and porosity.

2.3. A copy of a cement bond or comparable log run for the proposed injection well after casing was set and cemented.

2.4. Copies of logs already on file with the division should be referenced, but need not be refiled.

2.5. A description of the casing or proposed casing program of the injection well and of the proposed method for testing the casing before use of the well.

2.6. A statement as to the type of fluid to be used for injection, its source and estimated amounts to be injected daily.

2.7. Standard laboratory analyses of (1) the fluid to be injected, (2) the fluid in the formation into which the fluid is being injected, and (3) the compatibility of the fluids.

2.8. The proposed average and maximum injection pressures.

2.9. Evidence and data to support a finding that the proposed injection well will not initiate fractures through the overlying strata or a confining interval that could enable the injected fluid or formation fluid to enter the fresh water strata.

2.10. Appropriate geological data on the injection interval and confining beds, and nearby Underground Sources of Drinking Water, including the geologic name, lithologic description, thickness, depth, water quality, and lateral extent; also information relative to geologic structure near the proposed well which may effect the conveyance and/or storage of the injected fluids.

2.11. A review of the mechanical condition of each well within a one-half mile radius of the proposed injection well to assure that no conduit exists that could enable fluids to migrate up or down the wellbore and enter improper intervals.

2.12. An affidavit certifying that a copy of the application has been provided to all operators, owners, and surface owners within a one-half mile radius of the proposed injection well.

2.13. Any other additional information that the board or division may determine is necessary to adequately review the application.

3. Applications for injection wells which are within a recovery project area will be considered for approval:

3.1. Pursuant to R649-5-1-3.

3.2. Subsequent to board approval of a recovery project pursuant to R649-5-1-1.

4. Approval of an injection well is subject to the requirements of R649-5-4, if the proposed injection interval can be classified as an USDW.

5. In addition to the requirements of this section, the provisions of R649-3-1, R649-3-4, R649-3-24, R649-3-32, and R649-8-1 and R649-10 shall apply to all Class II injection wells.

R649-5-3. Noticing and Approval Of Injection Wells.

1. Applications for injection wells submitted pursuant to R649-5-1-3 shall be noticed in conformance with the procedural rules of the board as part of the hearing for the recovery project. Any person desiring to object to approval of such an application for an injection well shall file the objection in conformance with the procedural rules of the board.

2. The receipt of a complete and technically adequate application, other than an application submitted pursuant to R649-5-3-1, shall be considered as a request for agency action by the Division and shall be published in a daily newspaper of general circulation in the city and county of Salt Lake and in a newspaper of general circulation in the county where the proposed well is located. A copy of the notice of agency action shall also be sent to all parties including government agencies. The notice of agency action shall contain at least the following information:

2.1. The applicant's name, business address, and telephone number.

2.2. The location of the proposed well.

2.3. A description of proposed operation.

3. If no written objection to the application for administrative approval of an injection well is received by the division within 15 days after publication of the notice of agency action, or an aquifer exemption is not required in accordance with R649-5-4, and a board hearing is not otherwise required, the application may be considered and approved administratively.

4. If a written objection to an application for administrative approval of an injection well is received by the division within 15 days after publication of the notice of application, or if a hearing is required by these rules or deemed advisable by the director, the application shall be set for notice and hearing by the board.

5. The director shall have the authority to grant an exception to the hearing requirements of R649-5-1.1 for conversion to injection of additional wells which constitute a modification

or expansion of an authorized project provided that any such well is necessary to develop or maintain thorough and efficient recovery operations for any authorized project and provided that no objection is received pursuant to R649-5-3-3.

6. The director shall have authority to grant an exception to the hearing requirements of R649-5-1-1 for water disposal wells provided disposal is into a formation or interval that is not currently nor anticipated to be an underground source of drinking water and provided that no objection is received pursuant to R649-5-3-3.

R649-5-4. Aquifer Exemption.

1. The board may, after notice and hearing and subject to the EPA approval, authorize the exemption of certain aquifers from classification as an USDW based upon the following findings:

1.1. The aquifer does not currently serve as a source of drinking water.

1.2. The aquifer cannot now and will not in the future serve as a source of drinking water for any of the following reasons:

1.2.1. The aquifer is mineral, hydrocarbon or geothermal energy producing, or it can be demonstrated by the applicant as part of a permit application for a Class II well operation, to contain minerals or hydrocarbons that, considering their quantity and location, are expected to be commercially producible.

1.2.2. The aquifer is situated at a depth or location that makes recovery of water for drinking water purposes economically or technologically impractical.

1.2.3. The aquifer is contaminated to the extent that it would be economically or technologically impractical to render water from the aquifer fit for human consumption.

1.2.4. The aquifer is located above a Class III well mining area subject to subsidence or catastrophic collapse.

1.3. The total dissolved solids content of the water from the aquifer is more than 3,000 and less than 10,000 mg/l, and the aquifer is not reasonably expected to be used as a source of fresh or potable water.

2. Interested parties desiring to have an aquifer exempted from classification as a USDW, shall submit to the division an application that includes sufficient data to justify the proposal. The division shall consider the application and if appropriate, will advise the applicant to submit a request to the board for an aquifer exemption.

R649-5-5. Testing And Monitoring Of Injection Wells.

1. Before operating a new injection well, the casing shall be tested to a pressure not less than the maximum authorized injection pressure, or to a pressure of 300 psi, whichever is greater.

2. Before operating an existing well newly converted to an injection well, the casing outside the tubing shall be tested to a pressure not less than the maximum authorized injection pressure, or to a pressure of 1,000 psi, whichever is lesser, provided that each well shall be tested to a minimum pressure of 300 psi.

3. In order to demonstrate continuing mechanical integrity

after commencement of injection operations, all injection wells shall be pressure tested or monitored as follows:

3.1. Pressure Test. The casing-tubing annulus above the packer shall be pressure tested not less than once each five years to a pressure equal to the maximum authorized injection pressure or to a pressure of 1,000 psi, whichever is lesser, provided that no test pressure shall be less than 300 psi. A report documenting the test results shall be submitted to the division.

3.2. Monitoring. If approved by the director, and in lieu of the pressure testing requirement, the operator may monitor the pressure of the casing-tubing annulus monthly during actual injection operations and report the results to the division.

3.3. Other test procedures or devices such as tracer surveys, temperature logs or noise logs may be required by the division on a case-by-case basis.

3.4. The operator shall sample and analyze the fluids injected in each disposal well or enhanced recovery project at sufficiently frequent time intervals to yield data representative of fluid characteristics, and no less frequently than every year. The operator shall submit a copy of the fluid analysis to the division with the Annual Fluid Injection Report, UIC Form 4.

R649-5-6. Duration Of Approval For Injection Wells.

1. Approvals or orders authorizing injection wells shall be valid for the life of the well, unless revoked by the board for just cause, after notice and hearing.

2. An approval may be administratively amended if:

2.1. There is a substantial change of conditions in the injection well operation.

2.2. There are substantial changes to the information originally furnished.

2.3. Information as to the permitted operation indicates that an USDW is no longer being protected.

R649-5-7. Unit or Cooperative Development Or Operation.

Any person desiring to obtain the benefits of Section 40-6-7(1) insofar as the same relates to any method of unit or cooperative development or operation of a field or pool or a part of either, shall file a Request for Agency Action and a copy of such agreement with the board for approval after notice and hearing.

KEY: oil and gas law
June 2, 1998 **40-6-1 et seq.**
Notice of Continuation March 26, 2002

R649. Natural Resources; Oil, Gas and Mining; Oil and Gas.
R649-6. Gas Processing and Waste Crude Oil Treatment.
R649-6-1. Gas Processing Plants.

1. In accordance with Section 40-6-16 any operator of a facility or plant in which liquefiable hydrocarbons are removed from natural gas, including wet gas or casinghead gas, and the remaining residue gas is conditioned for delivery for sale,

recycling, or other use, shall file monthly, Form 13-A and Form 13-B.

1.1. Reports shall be filed for all gas processing plants or facilities to account for the receipt, processing, and disposition of all gas by the plant.

1.2. Plant operators that are required by contractual arrangements to allocate the residue gas and extracted liquids processed by the plant or facility to the individual producing wells, shall identify each well connected to the plant or facility by API number and report the metered wet gas volumes, residue gas volumes returned to the field, and all allocated residue gas and natural gas liquid volumes.

R649-6-2. Waste Crude Oil Treatment Facilities.

1. Prior to the construction of a waste crude oil treatment facility, an application shall be submitted to the division describing the ownership, location, type, and capacity of the facility contemplated; the extent and location of the surface area to be disturbed, including any pit, pond, or land associated with the facility; and a reclamation plan for the site. Approval of the application must be issued by the division before any ground clearing or construction shall occur.

2. As a condition for approval of any application, the owner or operator shall post a bond in an amount determined by the division to cover reclamation costs for the site. Failure to post the bond shall be considered sufficient grounds for denial of the application.

3. No waste crude oil treatment facility operator shall accept delivery of crude oil obtained from any tank, reserve pit, disposal pond or pit, or similar facility unless the delivery is accompanied by a run ticket, invoice, receipt or similar document showing the origin and quantity of the crude oil.

Notice of Continuation December 19, 2003

R649. Natural Resources; Oil, Gas and Mining; Oil and Gas.
R649-8. Reporting and Report Forms.
R649-8-1. General Report Forms.

1. The forms listed below, as modified by the Division from time to time shall be used for the purpose indicated in accordance with the instructions and the applicable rule.

Form 1 Application for Permit to Conduct Seismic Exploration R649-8-2

Form 2 Seismic Exploration Completion Report R649-8-3

Form 3 Application for Permit to Drill, Deepen, or Plug Back (APD) R649-8-4

Form 4 Bond R649-8-5

Form 5 Designation of Agent or Operator R649-8-6

Form 6 Entity Action Form R649-8-7

Form 7 Report of Water Encountered During Drilling R649-8-8

Form 8 Well Completion or Recompletion Report and Log R649-

8-9

Form 9 Sundry Notices and Reports on Wells R649-8-10

Form 10 Monthly Oil and Gas Production Report R649-8-11

Form 11 Monthly Oil and Gas Disposition Report R649-8-12

Form 12 Report of Transferred Oil R649-8-13

Form 13-A Monthly Summary Report of Gas Processing Plant Operations R649-8-14

Form 13-B Monthly Report of Gas Processing Plant Product Allocations R649-8-15

Form 14 Monthly Report of Waste Crude Oil Treatment Facility Operations R649-8-16

Form 15 Designation of Workover or Recompletion R649-8-17

UIC Form 1 Application for Injection Well R649-8-23

UIC Form 2 Monthly Report of Enhanced Recovery Project R649-8-24

UIC Form 3 Monthly Injection Report R649-8-25

UIC Form 4 Annual Fluid Injection Report R649-8-26

UIC Form 5 Transfer of Authority to Inject R649-8-27

UIC Form 6 Monthly Produced Water Disposition Report R649-8-28

2. Any permitted well which is referenced on a report form, correspondence, or well log should be identified by its assigned API number.

R649-8-2. Form 1, Application for Permit to Conduct Seismic Exploration.

At least seven days prior to commencing any type of seismic exploration operations, an Application for Permit to Conduct Seismic Exploration shall be submitted in duplicate to the division by the seismic contractor in accordance with R649-3-26.

R649-8-3. Form 2, Seismic Exploration Completion Report.

Within 60 days of the completion of each seismic exploration project, a Seismic Exploration Completion Report shall be submitted to the division by the seismic contractor in accordance with R649-3-26.

R649-8-4. Form 3, Application for Permit to Drill, Deepen, or Plug Back (APD).

Prior to the commencement of drilling, deepening, or plugging back any well or the commencement of exploratory drilling such as core holes and stratigraphic test holes, and prior to the commencement of any surface disturbance associated with such activity, the operator shall submit in duplicate an Application for Permit to Drill, Deepen, or Plug Back in accordance with R649-3-4.

R649-8-5. Form 4, Bond.

Except where a bond in satisfactory form has been filed by the operator in accordance with state, federal, or Indian lease requirements and evidence has been furnished to the division that such bond has been approved by the appropriate agency, the division shall require from the operator a good and sufficient bond in accordance with R649-3-1.

R649-8-6. Form 5, Designation of Agent or Operator.

Prior to the commencement of operations, a Designation of Agent or Operator shall be filed with the division in accordance with R649-2-4.

R649-8-7. Form 6, Entity Action Form.

1. For the purpose of accurately establishing the division's computerized oil and gas production accounting system and properly maintaining division of interest data for each well in the system, the operator shall file an Entity Action Form with the division within five working days of any of the following actions:

1.1. Spudding of a well, R649-3-6.

1.2. A change in operations which requires adding or removing a well from a group of wells that have identical division of interests, produce from the same formation, have product sales from a common tank, LACT meter, or gas meter, and have the same operator.

1.3. A change in operations when a service well is converted to a producing oil or gas well.

1.4. A change in operations when a well is recompleted and is capable of producing from another formation, R649-3-23.

1.5. A change in interest which requires adding or removing a well from a participating area of a properly designated unit.

2. Upon receipt of an Entity Action Form, the division will assign an entity number to a new well or change the entity number as needed for an existing well. This number identifies the well on the operator's monthly oil and gas production and disposition reports. Entity numbers are used by the State Tax Commission and the Division of State Lands and Forestry to properly account for all production taxes and the divisions of royalty interest on state leases.

3. This form does not take the place of Form 9, Sundry Notices and Reports on Wells, which is to be used to provide detailed accounts of physical operations on wells.

R649-8-8. Form 7, Report of Water Encountered During Drilling.

The operator shall report to the division all fresh water sands encountered during drilling in accordance with R649-3-6. The report shall be filed with the Well Completion or Recompletion Report and Log, Form 8.

R649-8-9. Form 8, Well Completion or Recompletion Report and Log.

In accordance with R649-3-11, R649-3-21, R649-3-23, and R649-3-24, the operator shall file a Well Completion or Recompletion Report and Log and a copy of the electric and radioactivity logs, if run, within 30 days after completing, recompleting, or plugging a well.

R649-8-10. Form 9, Sundry Notices and Reports on Wells.

1. This report form shall be used to notify the division of the intention to do miscellaneous work on any well for which a specific report form is not provided, and to report the subsequent results of that work. A notice of intention to do work on a well

located on lands with state, fee or privately owned minerals or to change plans previously approved shall be submitted in duplicate and must be received and approved by the division before the work is commenced. The operator is responsible for receipt of the notice by the division in ample time for proper consideration and action. In cases of emergency the operator may obtain verbal approval to commence work. Within five days after receiving verbal approval, the operator shall submit a Sundry Notice describing the work and acknowledging the verbal approval.

2. In addition to the types of work listed on the form, a Sundry Notice is required for the following:

2.1. Monthly status report for each drilling well in accordance with R649-3-6.

2.2. Application for permit to complete a well into more than one pool in accordance with R649-3-22.

2.3. Notice of intent to plug and abandon a well in accordance with R649-3-24.

2.4. Notice of intent to pull casing in accordance with R649-3-24.

2.5. Notice of change of operator. The report form should be submitted by both the previous operator and the new operator.

R649-8-11. Form 10, Monthly Oil and Gas Production Report.

1. The division will provide this report monthly to operators of all oil and gas wells within the state. Each operator shall complete the form to properly account for all oil, gas, and water produced from each well.

2. This report shall be submitted in conjunction with Form 11, Monthly Oil and Gas Disposition Report before the fifteenth day of the second calendar month following the month of production.

R649-8-12. Form 11, Monthly Oil and Gas Disposition Report.

1. All oil and gas well operators shall complete this form monthly to account for all oil and gas dispositions from each entity.

1.1. The report should account for the physical dispositions of all oil and gas produced during the report month from each well or group of wells (entity). Only the initial disposition of each product as it leaves the well site or is used at the well site should be reported. Residue gas and/or load oil received from another well, plant, or field should not be shown on this report.

2. This report shall be submitted in conjunction with Form 10, Monthly Oil and Gas Production Report and Form 12, Report of Transferred Oil on or before the fifteenth day of the second calendar month following the month of production.

R649-8-13. Form 12, Report of Transferred Oil.

1. This report is to be used only in accounting for oil that is transferred from one entity to another entity or oil that is acquired and used during remedial operations on a well. This includes situations such as (1) oil that is produced at one entity or is acquired from another company, is then used as load oil at a "second" entity, and is then recovered and sold, or (2) oil that

is produced and then transferred to a "second" entity for treatment and sale due to mechanical problems at the producing entity.

1.1. Load oil that is recovered at the "second" entity and non-load oil that is transferred to the "second" entity should be excluded from all reported production, dispositions, and stocks of the "second" entity on Form 11, Monthly Oil and Gas Disposition Report. This allows the reporting of the "second" entity's true production and sales on Form 11, while the remainder of any sales is accounted for on this form. The transported volumes reported on this form plus the transported volume for the "second" entity on Form 11 should equal the total run ticket volume as reported by the trucking or pipeline company serving this entity.

2. This report is to be filed as an attachment to Form 11, Monthly Oil and Gas Disposition Report during the month in which recovered load oil or any other transferred oil (non-load oil) is sold from the "second" entity.

R649-8-14. Form 13-A, Monthly Summary Report of Gas Processing Plant Operations.

1. Gas processing plant operators shall complete and submit a monthly report in accordance with R649-6-1, to account for the receipt, processing and disposition of all gas by the plant.

2. The report is due on or before the fifteenth day of the second calendar month following the operations month covered by the report.

R649-8-15. Form 13-B, Monthly Report of Gas Processing Plant Product Allocations.

1. Gas processing plant operators that are required by contractual arrangements to allocate residue gas and extracted liquids to the individual producing wells must complete and submit this form monthly in accordance with R649-6-1.

2. The report is to be filed as an attachment to Form 13-A, Monthly Summary Report of Gas Processing Plant Operations on or before the fifteenth day of the second calendar month following the operations month covered by the report.

R649-8-16. Form 14, Monthly Report of Waste Crude Oil Treatment Facility Operations.

1. Each operator of treatment or reclaiming facilities handling tank bottoms, oil from pits or ponds, or any other waste crude oil, shall complete and submit this report monthly in accordance with R649-6-2 to account for stocks, receipts, and deliveries of processed and unprocessed waste crude oil.

2. The report is due on or before the fifteenth day of the second calendar month following the operations month covered by the report.

R649-8-17. Form 15, Designation of Workover or Recompletion.

1. In accordance with Rule R649-3-23, each operator desiring to claim a tax credit for workover or recompletion work performed must submit this report within 90 days after the workover or recompletion work is completed. Upon determination and

notification by the division that the described work qualifies for a tax credit under this rule, the operator may claim the tax credit on reports submitted to the Tax Commission during the third quarter after completion of the work.

2. The following workover and recompletion operations qualify for a tax credit: perforating, stimulation (e.g., acid jobs, frac jobs, solvent treatments, nitrogen cleanouts), sand control, water control or shut-off, wellbore cleanout, casing or liner repair, well deepening, initiation of enhanced recovery (excluding surface equipment and associated costs), change of lift system (excluding surface equipment and associated costs), gas well tubing changes (i.e., down-sizing), thief zone identification and elimination. The following workover and recompletion operations do not qualify for a tax credit: pump changes, rod string fishing and repair/replacement, tubing repair/replacement, surface equipment installation and repair, operations generally classified as routine maintenance or repair. Division approval is conditional subject to audit, and actual final expenses may be disallowed if they are not appropriate workover or recompletion expenses.

R649-8-18. UIC Form 1, Application for Injection Well.

Prior to the commencement of operations for injecting any fluid into a well for the purpose of enhanced recovery, disposal, or storage, the operator shall submit an Application for Injection Well and obtain division approval in accordance with R649-5-2.

R649-8-19. UIC Form 2, Monthly Report of Enhanced Recovery Project.

1. The operator shall submit this report monthly to report the injection pressure, rate, and volume for each enhanced recovery injection well or project.

2. The report is due within 30 days following the end of the month of operations.

R649-8-20. UIC Form 3, Monthly Injection Report.

1. The operator shall submit this report monthly to report the daily injection pressure, rate, and volume for each disposal well and/or storage well.

2. The report is due within 30 days following the end of the month of operations.

R649-8-21. UIC Form 4, Annual Fluid Injection Report.

1. The operator of disposal wells, storage wells, or enhanced recovery projects shall file an annual report with the division using this form.

2. The report is due within 60 days following the end of the year.

R649-8-22. UIC Form 5, Transfer of Authority to Inject.

1. The authority to inject for any injection well shall not be transferred from one operator to another without the approval of the division. The transfer of authority to inject for any injection well from one operator to another shall be submitted to

the division on this form prior to the date of the proposed transfer.

2. The division shall, within 30 days after receipt of a properly completed form, return a copy of the form to each operator indicating approval or denial of the transfer of authority to inject. If approved, a copy of the order authorizing injection shall be attached to the form returned to the new operator.

KEY: oil and gas conservation, reporting
June 2, 1998 **40-6-1 et seq.**
Notice of Continuation March 26, 2002

R649. Natural Resources; Oil, Gas and Mining; Oil and Gas.
R649-9. Waste Management and Disposal.
R649-9-1. Introduction.

1. Section 40-6-5 UCA authorizes the board to regulate the disposal of salt water and oil-field wastes. It is the intent of the Board and Division to regulate E and P Wastes and facilities for the disposal of these wastes in a manner which protects the environment, limits liability to producers, and minimizes the volume of waste.

2. These rules specify the informational and procedural requirements for waste management and disposal, the permitting of disposal facilities, and cleanup requirements for E and P related sites.

R649-9-2. General Waste Management.

1. Wastes addressed by these rules are E and P Wastes which are exempt from the RCRA hazardous waste management requirements.

2. Reduction of the amount of material generated which must be disposed of is the preferred practice. Recycling should be used whenever possible and practical. In general, good housekeeping practices shall be used. Operators shall catch leaks and drips, contain spills, and cleanup promptly.

3. The method of disposal used shall be compatible with the waste which is the subject of disposal. RCRA exempt waste shall not be mixed with nonexempt waste. Before using a commercial disposal facility the Division may be contacted to verify the status of the facility.

4. The operator shall file an Annual Waste Management Plan by January 15 of each year to account for the proper disposition of produced water and other E and P Wastes. If changes are made to the plan during the year, then the operator shall notify the division in writing of this change. This plan will include the type and estimated volume of wastes to be generated, the disposal facilities (central and commercial) to be used for disposal, and the description of any waste reduction or minimization procedures and any onsite disposal/treatment to be implemented by the operator. Each site and/or facility used for disposal must be permitted and in good standing with the division.

R649-9-3. Permitting of Disposal Pits.

1. All commercial disposal pits and disposal pits located off of an existing mineral lease shall be bonded in accordance with R649-9-9, Bonding of Disposal Facilities to assure proper operation, maintenance, and closure of the pits.

2. Application shall be made to the Division for approval of any disposal pit. The pit shall be designed appropriately for the intended purpose. Commercial disposal pits shall be designed and constructed under the supervision of a registered professional engineer. The application and site shall meet the following requirements:

2.1 The pit shall be located on level, stable ground, and an acceptable distance away from any established or intermittent drainage.

2.2. The pit shall not be located in a geologically and hydrologically unsuitable area, such as aquifer recharge areas, flood plains, drainage bottoms, and areas near faults.

2.3. The pit shall have adequate storage capacity to safely contain all produced water even during those periods when evaporation rates are at a minimum.

2.4. The pit shall be designed and constructed so as to prevent the entrance of surface water.

2.5. The pit shall be designed, maintained and operated to prevent unauthorized surface or subsurface discharge of water.

2.6. The pit shall be fenced and maintained to prevent access by livestock, wildlife and unauthorized personnel and if required, equipped with flagging or netting to deter entry by birds and waterfowl.

2.7. The pit levees for produced water pits receiving volumes in excess of five barrels per day, shall be constructed so that the inside grade of the levee is no steeper than 3:1 and the outside grade no steeper than 2:1. The top of the levee shall be level and of sufficient width to allow for adequate compaction.

2.8 All approved produced water pits not located at a well site shall be identified with a suitable sign.

2.9. The artificial materials used in lining pits shall be impervious and resistant to weather, sunlight, hydrocarbons, aqueous acids, alkalies, salt, fungi, or other substances which might be contained in the produced water.

3. If rigid materials are used, leak proof expansion joints shall be provided, or the material shall be of sufficient thickness and strength to withstand, without cracking, expansion, contraction and settling movements in the underlying earth.

3.1. If flexible materials are used, they shall be of sufficient thickness and strength to be resistant to tears and punctures. Commercial disposal pits shall be lined with a minimum liner thickness of 40 mils or as approved by the Division.

3.2. Lined pits constructed in relatively impermeable soils shall have an underlaying gravel filled sump and lateral system or suitable leak detection system.

3.3 Lined pits constructed in relatively permeable soils shall have a secondary liner underlaying the leak detection system, which is graded so as to direct leakages to the observation sump.

3.4. Test borings shall be taken in sufficient quantity and to an adequate depth to satisfactorily define subsurface conditions and assure that the liner will be placed on a firm stable base and to determine the appropriate leak detection system.

4. Requirements for Unlined Disposal Pits.

4.1 An application for disposal of produced water into an unlined pit will be considered if such disposal does not demonstrate significant pollution potential to surface or ground water and meets at least one of the following criteria:

4.2. The water to be disposed of does not have a higher total dissolved solids "TDS" content than ground water that could be affected and provided that the water does not contain objectionable levels of constituents and characteristics including chlorides, sulfates, pH, oil, grease, heavy metals and aromatic hydrocarbons.

4.3. That all, or a substantial part of the produced water is being used for beneficial purposes such as irrigation and livestock or wildlife watering and a water analysis indicates that the water is acceptable for the intended use.

4.4. The volume of water to be disposed of does not exceed five barrels per day on a monthly basis.

5. Application Requirements for Produced Water Pits.

5.1. Applications for disposal of produced water into lined pits shall include the following information:

5.2. A topographic map and drawing of the site on a suitable scale that indicate the pit dimensions, cross section, side slopes, leak detection system and location relative to other site facilities. The drawings shall be of professional quality.

5.3. The maximum daily quantity of water to be disposed of and a representative water analysis of such water that includes the concentrations of chlorides and sulfates, pH, total dissolved solids "TDS", and information regarding any other significant constituents if requested.

5.4. Climatological data indicating the average annual evaporation and precipitation for the area.

5.5. The method and schedule for disposal of precipitated solids.

5.6. Drawings of unloading facilities and explanation of the method for controlling and disposing of any liquid hydrocarbon accumulation so that the evaporation process is not hampered.

5.7. The engineering data and design criteria used to determine the pit size which includes a 2-foot free-board.

5.8. The type, thickness, strength, and life span of material to be used for lining the pit and the method of installation.

5.9. A description of the leak detection method to be utilized and the proposed inspection frequency of the detection system. Also the proposed procedures for repair of the liner should leakage occur.

6. Applications for disposal of produced water into unlined pits shall include the following information:

6.1. A topographic map and drawing of the site on a suitable scale that indicate the pit dimensions, cross section, side slopes, size and location relative to other site facilities.

6.2. The daily quantity of water to be disposed of and a representative water analysis of such water that includes the total dissolved solids "TDS", pH, oil and grease content, the concentrations of chlorides and sulfates, and information regarding any other significant constituents if required.

6.3. Climatological data indicating the average annual evaporation and precipitation for the area.

6.4. The estimated percolation rate based on soil characteristics under and adjacent to the pit.

6.5. Estimated depth and areal extent of any USDW in the area and an indication of any effect or interaction of the produced water with any such water resources present at or near the surface.

6.6. If beneficial use is the basis for the application, written confirmation from the user should be submitted.

6.7. If the application is made on the basis that surface and subsurface waters will not be adversely affected by disposal in an unlined pit, the following additional information is required:

6.7.1. A map showing the location of surface waters, water wells, and existing water disposal facilities within a one mile radius of the proposed disposal facility.

6.7.2. The weighted average concentration of total dissolved solids "TDS" of all surface and subsurface waters within a one mile radius that might be affected by the proposed disposal.

6.7.3. Any reasonable geological and hydrological evidence showing that the proposed disposal method will not adversely affect existing water quality or major uses of such waters.

7. Within 30 days of the submission of an application for disposal of produced water into a commercial disposal pit, the division shall review the application as to its completeness and adequacy for the intended purpose and shall require such changes that are found necessary to assure compliance with the applicable rules. If the application is in order, the Division shall provide for a public notice to be published in a newspaper of general circulation in the county where the pit is to be located.

R649-9-4. Permitting of Other Disposal Facilities.

1. Facilities used for the treatment and disposal of E and P wastes other than evaporation pits shall be permitted by the Division. This would include such activities as landfarming, composting, solidifying, bioremediation, and others.

2. All commercial treatment and disposal facilities must be bonded in accordance with R649-9-9, Bonding of Disposal Facilities, to assure proper operation, maintenance, and closure of the facility.

3. Application Requirements for Treatment and Disposal Facilities. The application shall contain the following:

3.1 A complete description of the proposed facility and processes involved including a complete list of all wastes to be accepted at the facility and products generated.

3.2 Maps and drawings of suitable scale showing all facilities and equipment.

3.3 Materials or products to be applied to the land surface or subsurface shall meet the Division's cleanup levels for contaminated soil and other wastes. If leachability and/or toxicity is of concern due to the type or source(s) of wastes, tests will be required and may utilize the Toxicity Characteristic Leaching Procedure (TCLP).

3.4 The submission of an application to the Division of Water Quality, Department of Environmental Quality, for a discharge permit may be required if it is determined that the facility and associated activity will not have a de minimus actual or potential effect on ground water quality. If the Division determines there is potential for discharge, or if the proposal involves a commercial disposal operation it will be forwarded to the Division of Water Quality for their review.

R649-9-5. Construction and Inspection Requirements for Disposal Facilities.

1. Division personnel shall be afforded a reasonable opportunity for inspection of any proposed disposal facility during the construction and operation of the facility.

2. The division shall be notified at least two working days prior to the installation of a pit liner so that an inspection of the leak detection system can be conducted.

3. In any case, the division shall be notified after completion of facility construction, at least two working days prior to its use, so that an inspection can be conducted to verify that the facility has been constructed in accordance with the approved application.

4. Disposal facilities shall be operated in accordance with an approved application and in a manner which does not cause pollution or safety and health hazards.

5. Failure to meet the requirements and standards for construction and operation of a disposal facility shall be considered as noncompliance and will result in the imposition of corrective actions and compliance schedules or a cessation of operations order.

R649-9-6. Reporting and Recordkeeping Requirements for Disposal Facilities.

1. All unauthorized discharges or spills from disposal facilities including water observed in a leak detection system shall be promptly reported to the division.

2. Each producer who utilizes any approved produced water disposal facility shall comply with the reporting requirements of R649-8-10.

3. Each operator of a disposal facility, excluding disposal wells, shall report to the Division on a quarterly basis. This report shall include the volume and type of wastes received at the facility during the quarter and results of the leak detection system inspections.

4. The occurrence of water in a leak detection system during operation of a pit constitutes liner failure and requires immediate action. The Division has the option of allowing the operator a short period of time to take corrective action. Further utilization of the pit will be allowed only after liner

repairs and an inspection by the Division.

5. Each owner/operator of a commercial disposal facility shall keep records showing at a minimum the following: date and time waste was received, origin, volume, type, transporter, and generator of the waste. These records shall be available for inspection by the Division for at least six years.

R649-9-7. Final Closure and Cleanup of Disposal Facilities.

1. A plan for final closure of a disposal facility shall be submitted to the Division for approval. The closure plan shall include the following:

1.1 Provisions for removal of all equipment at the site.

1.2 Proposed plans and procedures for sampling and testing soils and ground water at the site. Soils will need to meet the Division's Cleanup Levels for Contaminated Soils or background levels whichever is less stringent.

1.3 Provisions for a monitoring plan if required by the Division, and

1.4 A consideration of post disposal land use and landowner requests when the closure plan is developed.

2. A bond for a disposal facility will be released when the requirements of a closure plan approved by the Division has been met as determined by the Division.

R649-9-8. Variances from Requirements and Standards.

Requests for approval of a variance from any of the requirements or standards of these rules shall be submitted to the director in writing and provide information as to the circumstances which warrant approval of the requested variance and the proposed alternative means by which the requirements or standards will be satisfied. Variances may be approved only after proper notice and public hearing before the board.

R649-9-9. Bonding of Disposal Facilities.

1. Disposal facilities, other than injection wells, shall be bonded according to this rule in order to protect the State and oil and gas producers from unnecessary liabilities and cleanup costs in the future. The objectives are to provide the State with adequate security to allow rehabilitation of a site to the point of preventing further or future pollution, and health and safety hazards should a facility owner default.

1.1. The parameters used to calculate the proper bond amount are: pit area, storage capacity, and volume of waste stored.

1.2. Bonds accepted shall be of the same type as those accepted for wells i.e. surety, collateral, or a combination of the two as described in the R649-3-1. In order to assist facility owners in providing bonding, the total bond amount provided may consist of an initial amount as determined by the division and an additional amount collected at a price per barrel and/or price per cubic yard of waste collected until the total bond amount is reached. The total bond will be held by the division or financial institution until the facility has been closed and inspected by the division in accordance with a division approved closure plan.

1.3. Total bond amount is calculated using values for pit area, pit storage capacity, and volume of stock piled waste material. No salvage value of equipment or removal cost is used. This bond will only be used by the State to treat or remove waste from the site and secure the facility to prevent any future contamination should the facility owner default on cleanup responsibilities. Bond amounts will be calculated as follows, and the per volume or per acre figures may be adjusted periodically to compensate for change in cost to perform the necessary cleanup work:

$14,000 per acre of pit, partial acres will be calculated at the rate of $14,000 per acre; plus

$1.00 per barrel of produced water for one-quarter of the total storage capacity of the facility; plus

$30 per cubic yard of solid or semi-solid waste material stockpiled at the facility.

$10,000 Minimum bond amount.

1.4 All commercial disposal facilities (except injection wells covered by R649-3-1) will be covered by an adequate and acceptable bond before being permitted to accept any exploration and production waste. The initial and minimum bond payment will be at least $10,000. The total bond amount will be calculated as described in Subsection R649-9-9(1.3). If requested by the disposal facility owner, the bond beyond the initial amount may be posted at a rate of two cents per barrel of liquid or sixty cents per cubic yard of solid/semi-solid waste material accepted for disposal at the facility.

KEY: oil and gas law
June 2, 1998 **40-6-1 et seq.**
Notice of Continuation March 26, 2002

R649. Natural Resources; Oil, Gas and Mining; Oil and Gas.
R649-10. Administrative Procedures.
R649-10-1. Designation of Informal Adjudicative Proceedings.

1. Adjudicative proceedings which shall be conducted informally before the division in accordance with these rules are all actions prescribed by the Oil and Gas Conservation General Rules as being specifically under the division's authority and jurisdiction including: R649-2 General Rules; R649-3 Drilling and Operating Practices; R649-5 Underground Injection Control of Recovery Operations and Class II Injection Wells; R649-6 Gas Processing and Waste Crude Oil Treatment; R649-8 Reporting and Report Forms; R649-9 Disposal of Produced Water.

2. Prior to the issuance of a final order in any adjudicative proceeding, the presiding officer may convert an informal proceeding to a formal adjudicative proceeding if:

2.1. Conversion of the proceeding is in the public interest.

2.2. Conversion of the proceeding does not unfairly prejudice the rights of any party.

3. Informal adjudicative proceedings shall be commenced and conducted in accordance with these rules and the provisions of the applicable Oil and Gas Conservation General Rules. In case of conflict between these rules and the Oil and Gas Conservation

General Rules, these rules shall govern the informal adjudicative proceedings.

R649-10-2. Definitions.

As used in these rules:

1. "Adjudicative proceeding" means an agency action or proceeding that determines the legal rights, duties, privileges, immunities, or other legal interests of one or more identifiable persons, including all agency actions to grant, deny, revoke, suspend, modify, annul, withdraw, or amend an authority, right, or license; and judicial review of all of such actions.

2. "Agency" means the Board of Oil, Gas and Mining and the Division of Oil, Gas and Mining including the director or division employees acting on behalf of or under the authority of the director or board.

3. "Agency head" means an individual or body of individuals in whom the ultimate legal authority of the agency is vested by statute.

4. "Board" means the Board of Oil, Gas and Mining.

5. "Division" means the Division of Oil, Gas and Mining.

6. "License" means a franchise, permit, certification, approval, registration, charter, or similar form of authorization required by statute.

7. "Party" means the board, division, or other person commencing an adjudicative proceeding, all respondents, all persons permitted by the board to intervene in the proceeding, and all persons authorized by statute or agency rule to participate as parties in an adjudicative proceeding.

8. "Person" means an individual, group of individuals, partnership, corporation, association, political subdivision or its units, governmental subdivision or its units, public or private organization or entity of any character, or another agency.

9. "Presiding Officer" means an agency head, or an individual or body of individuals designated by the agency head, by the agency's rules, or by statute to conduct an adjudicative proceeding. For the purpose of these rules, the board, or its appointed hearing examiner, shall be considered the presiding officer of all appeals or informal adjudicative proceedings which commence before the division as well as all adjudicative proceedings which commence before the board. The director or his designated agent shall be considered a presiding officer for all informal adjudicative proceedings which commence before the division. If fairness to the parties is not compromised, an agency may substitute one presiding officer for another during any proceeding.

10. "Respondent" means any person against whom an adjudicative proceeding is initiated whether by an agency or any other person.

R649-10-3. Commencement of Informal Adjudicative Proceedings.

1. Except for emergency orders, all informal adjudicative proceedings shall be commenced by:

1.1. A Notice of Agency Action, if proceedings are commenced by the board or division; or

1.2. A Request for Agency Action, if proceedings are commenced by persons other than the board or division.

2. A Notice of Agency Action shall be filed and served according to the following requirements:

2.1. The Notice of Agency Action shall be in writing and shall be signed by a presiding officer and shall include:

2.1.1. The names and mailing addresses of all persons to whom notice is being given by the presiding officer, and the name, title, and mailing address of any attorney or employee who has been designated to appear for the agency.

2.1.2. The division's file number or other reference number.

2.1.3. The name of the adjudicative proceeding.

2.1.4. The date that the Notice of Agency Action was mailed.

2.1.5. A statement that the adjudicative proceeding is to be conducted informally according to the provision of these rules and Sections 63-46b-4 and 63-46b-5 if applicable.

2.1.6. A statement that the parties may request an informal hearing before the division within ten days, or such later period as may be provided for in the Oil and Gas Conservation General Rules, of the date of mailing or publication.

2.1.7. A statement of the legal authority and jurisdiction under which the adjudicative proceeding is to be maintained.

2.1.8. The name, title, mailing address, and telephone number of the presiding officer.

2.1.9. A statement of the purpose of the adjudicative proceeding and, to the extent known by the presiding officer, the questions to be decided.

2.2. The Division shall:

2.2.1. Mail the Notice of Agency Action to each party and any other person who has a right to notice under statute or rule.

2.2.2. Publish the Notice of Agency Action as required by statute or by the Oil and Gas Conservation General Rules.

2.2.3 Post a copy of the notice in a public area in the main office of the division at least 24 hours in advance of the scheduled agency proceeding.

2.3. A Request for Agency Action initiated by a person other than the board or the division shall be in writing and signed by the person seeking action by the the agency or by his representative, and shall include:

2.3.1. The names and addresses of all persons to whom a copy of the request for agency action is being sent.

2.3.2. The agency's file number or other reference number, if known.

2.3.3. The date that the request for agency action was mailed.

2.3.4. A statement of the legal authority and jurisdiction under which the agency action is requested.

2.3.5. A statement of the relief or action sought from the division.

2.3.6. A statement of the facts and reasons forming the basis for relief or action.

2.4. The person requesting agency action shall file the request with the division and shall send a copy by mail to each person known to have a direct interest in the requested agency action unless previously waived in writing by each person entitled to receive notice of the requested agency action.

2.5. The person requesting the agency action may use the division forms as specified in the Oil and Gas Conservation General Rules as a request for agency action.

2.6. The presiding officer shall promptly review a Request for Agency Action and shall:

2.6.1. Notify the requesting party in writing whether the request is granted and when the adjudicative proceeding is completed;

2.6.2. Notify the requesting party in writing that the request is denied; or

2.6.3. Notify the requesting party that further proceedings are required to determine the agency's response to the request.

2.7. The division shall mail any required notice to all parties, except that any notice required by R649-10-3-2.6 may be published when publication is required by statute.

2.7.1. Give the division's file number or other reference number.

2.7.2. Give the name of the proceeding.

2.7.3. Designate that the proceeding is to be conducted informally according to the provisions of these rules and Sections 63-46b-4 and 63-46b-5 if applicable.

2.7.4. If a hearing is to be held in an informal adjudicative proceeding, state the time and place of any scheduled hearing, the purpose for which the hearing is to be held, and that a party who fails to attend or participate in a scheduled and noticed hearing may be held in default.

2.7.5. If the adjudicative proceeding is to be informal, and a hearing is required by statute or rule, or if a hearing is permitted by rule and may be requested by a party with the time prescribed by rule, state the parties' right to request a hearing and the time within which a hearing may be requested under the agency's rules.

2.7.6. Give the name, title, mailing address, and telephone number of the presiding officer.

R649-10-4. Procedures for Informal Adjudicative Proceedings.

1. Procedures for informal adjudicative proceedings should include the following:

1.1. Unless the agency by rule provides for and requires a response, no answer or other pleading responsive to the allegations contained in the notice of agency action or the request for agency action need be filed.

1.2. The agency shall hold a hearing if a hearing is requested within ten days or such later period as may be provided for in the Oil and Gas Conservation General Rules.

1.3. In any hearing, the parties named in the Notice of Agency Action or in the Request for Agency Action shall be permitted to testify, present evidence, and comment on the issues.

1.4. Hearings will be held only after timely notice to all parties.

1.5. Discovery is prohibited, but the agency may issue subpoenas or other orders to compel production of necessary evidence.

1.6. All parties shall have access to information contained in the agency's files and to all materials and information gathered in any investigation, to the extent permitted by law.

1.7. Intervention is prohibited, except where a federal statute or rule requires that a state permit intervention.

1.8. All hearings shall be open to all parties.

1.9. Within a reasonable time after the close of an informal adjudicative proceeding, the presiding officer shall issue a signed order in writing that states the following:

1.9.1. The decision.

1.9.2. The reasons for the decision.

1.9.3. A notice of any right of administrative or judicial review available to the parties.

1.9.4. A statement that the filing of an appeal or the requesting of a review shall be accomplished within 30 days of the issuance of the order.

1.10. The presiding officer's order shall be based on the facts appearing in the agency's files and on the facts presented in evidence at any hearings.

1.11. A copy of the presiding officer's order shall be promptly mailed to each of the parties and to all persons who request a copy.

2.1. The agency may record any hearing.

2.2. Any party, at his own expense, may have a reporter, approved by the agency, prepare a transcript from the agency's record of the hearing.

3.0. Nothing in this section restricts or precludes any investigative right or power given to an agency by another statute.

R649-10-5. Default In An Informal Proceeding.

1. The presiding officer may enter an order of default against:

1.1. A party in an informal adjudicative proceeding if after proper notice the party fails to participate in the informal adjudicative proceeding.

2.0. An order of default shall include a statement of the grounds for default and shall be mailed to all parties.

3.1. A defaulted party may seek to have the agency set aside the default order, and any order in the adjudicative proceeding issued subsequent to the default order, by following the procedures outlined in the Utah Rules of Civil Procedure.

3.2. A motion to set aside a default and any subsequent order shall be made to the presiding officer.

3.3. A defaulted party may seek board review under R649-10-6 only on the decision of the presiding officer on the motion to set aside the default.

4.0. In an adjudicative proceeding commenced by the agency, or in an adjudicative proceeding commenced by a party that has other parties besides the party in default, the presiding officer shall, after issuing the order of default, conduct any further proceeding without the participation of the party in default and shall determine all issues in the adjudicative proceeding, including those affecting the defaulting party.

5.0. In an adjudicative proceeding that has no parties other than the agency and the party(ies) in default, the presiding officer may, after issuing the order(s) of default, dismiss the proceeding.

R649-10-6. Appeal of Division Order.

1. A request for review of an order issued by the division shall be filed with the secretary to the Board within 30 days of issuance of the order and:

1.1. Be signed by the party seeking review.

1.2. State the grounds for review and the relief requested.

1.3. State the date upon which it was mailed.

1.4. Be sent by mail to the presiding officer and to each party.

2. Within 15 days of the mailing date of request for review, or within the time period provided by agency rule, whichever is longer, any party may file a response with the board. One copy of the response shall be sent by mail to each of the parties and to the presiding officer.

3. The board shall review the order within a reasonable time or within the time required by statute or the agency's rules.

4. To assist in review, the board may by order or rule permit the parties to file briefs or other papers, or to conduct oral argument.

5. Notice of hearings on review shall be mailed to all parties.

6.1. Within a reasonable time after the filing of any response, other filings, or oral argument, or within the time required by statute or applicable rules, the board shall issue a written order on review.

6.2. The order on review shall be signed by the board chairman or by a person designated by the board for that purpose and shall be mailed to each party.

6.3. The order on review shall contain:

6.3.1. A designation of the statute or rule permitting or requiring review.

6.3.2. A statement of the issues reviewed.

6.3.3. Findings of fact as to each of the issues reviewed.

6.3.4. Conclusions of law as to each of the issues reviewed.

6.3.5. The reasons for the disposition.

6.3.6. Whether the decision of the presiding officer or agency is to be affirmed, reversed, or modified, and whether all or any portion of the adjudicative proceeding is to be remanded.

6.3.7. A notice of any right of further administrative reconsideration or judicial review available to aggrieved parties.

6.3.8. The time limits applicable to any appeal or review.

R649-10-7. Emergency Orders.

Notwithstanding the other provisions of these rules, the director or any member of the board is authorized to issue an emergency order without notice and hearing in accordance with Section 40-6-10. The emergency order shall remain in effect no longer than until the next regular meeting of the board, or such shorter period of time as shall be prescribed by statute.

1. An emergency order may be issued if:

1.1. The facts known by or presented to the director or board member are supported by affidavit to show that an immediate and significant danger of waste or other danger to the public health, safety, or welfare exists; and

1.2. The threat requires immediate action by the director or board member,

2. Limitations. In issuing its emergency order, the director or board member shall:

2.1. Limit its order to require only the action necessary to prevent or avoid the danger to the public health, safety, or welfare;

2.2. Issue promptly a written order, effective immediately, that includes a brief statement of findings of fact, conclusions of law, and reasons for the agency's utilization of emergency adjudicative proceedings;

2.3. Give immediate notice to the persons who are required to comply with the order; and

2.4. If the emergency order issued under this section will result in the continued infringement or impairment of any legal right or interest of any party, the division shall commence a formal adjudicative proceeding in accordance with the procedural rules of the board.

R649-10-8. Exhaustion of Administrative Remedies.

A person aggrieved by a division order in an adjudicative proceeding must seek review of that order by the board as provided in R649-10-6.

R649-10-9. Waivers.

Notwithstanding any other provision of these rules, any procedural matter, including any right to notice or hearing, may be waived by the affected person(s) by a signed, written waiver in a form acceptable to the division.

TABLE OF CONTENT

Table of Tables

LEGAL NOTICE

Introduction:

The Regional Partnerships for Carbon Sequestration programs funded by DOE are ultimately required to identify the best carbon sequestration options in their respective regions, consisting of a CO_2 source, applicable CO_2 capture technology, transportation logistics (if applicable) and destination formation for non-terrestial sequestration approaches. In most cases the carbon capture step is the most costly, and selecting the appropriate least-cost options will be of particular importance. GTI was selected to provide advice and consultation on capture technologies for the Southwest Partnership.

This report consists of a summary of various databases assembled to help locate and quantify the CO_2 emissions in the Southwest Region. These point sources in the southwest region are mainly coal-fired power plants. Other sources include natural gas processing plants, refineries, ammonia/fertilizer production, ethylene and ethanol plants, and cement plants.

This information will assist in identifying candidate projects for Phase II.

Scope of Work:

The objective of this project is to delineate technologies applicable to capturing carbon dioxide from point sources and to provide estimates from various sources of the specific costs of such technologies. Research and Development on new technologies will be reviewed and a listing of those that appear promising and are sufficiently in the development cycle will be presented.

Databases:

GTI was requested to assemble a listing of gas treating plants in the Southwest Partnership Region (SW). These are plants that remove CO_2 from natural gas and generally emit the CO_2 at low pressure into the atmosphere. These were assembled and transmitted. However, the original data did not contain any location beyond the state in which the plant was located. GTI was requested to provide any and all location data as well as emission data in addition to facility data required to estimate the cost of capture.

Table 1 provides an index of the various databases assembled to meet the source data needs of the partnership. Some of the databases exist as Microsoft® Access™ databases, but they have all been assembled into Microsoft® Excel™ files to ease transfer. Table 2 is an extended table of the fields contained on each of the worksheets. The Appendices are a partial listing of the complete files. Where the database could be contained in a reasonable number of pages, it has been included in full within the Appendix. Where the worksheets would take hundreds or thousands of pages, a partial listing has been included to indicate the scope of the data.

Data by source

The overwhelming CO_2 emissions in the region are from coal-based power plants. Information on electrical generation plants can be found in the following workbooks/worksheets:

1. Sources in SW_By SIC/SW
2. SW_NATCARB_Data/Emissions and Facilities with RBLCID
3. SW_ElectricPlants_CO_2_Tons_%/ SW_ElectricPlants_CO_2_Tons_%
4. SW_99AirDataFacilitiesFile/RBLC_SW and RBLC_SW_ElectGen
5. SW_Coorid_fromEPA_HAP/SW

6. RACT_BACT_laer/SW
7. SW_NATCARB_Data_Facilities with Match to RACT_BACT_laer/Facilities 1030617920
8. SW_ElectricPlants_eGRID/all

Information on natural gas production and sources of emissions can be found in the following:

1. Sources in SW_BySIC/SW
2. SW_RegionalGasPlants/All
3. RACT_BACT-laer_NonPower/NonPower
4. SW_SubqualityGas Composition/SW_Subquality
5. SW_99AirDataFacilitiesFile/RBLC_SW and RBLC_SW_ElectGen
6. SW_Coorid_fromEPA_HAP/SW
7. RACT_BACT_laer/SW

Information on other CO_2 emitting industries can be found in the following:

1. Sources in SW_BySIC/SW
2. RACT_BACT-laer_NonPower/Portland Cement, Fertilizer, and NonPower
3. SW_NonFuelPlants/CementInRegion, AmmoniaInRegion, ChlorinePlants, EthlyenePlants, and Refineries (to be completed)
4. SW_99AirDataFacilitiesFile/RBLC_SW and RBLC_SW_ElectGen
5. SW_Coorid_fromEPA_HAP/SW
6. RACT_BACT_laer/SW
7. SW_minerals_usgs_gov/SW
8. SW_EthanolPlants/SW_EthanolProduction

Data with Location Information

It is difficult to locate each point source of CO_2. Some data sources will identify the location by latitude and longitude, some by physical address, county map coordinates, or by driving instructions from the red barn with blue shutters. In addition, there is not a consistent identified across the various data sources. Plant names may be the most consistent, but owners change on a regular basis. In some databases, GTI has included cross references to identifiers in other databases. GTI has suggested to the partnership several means to obtain latitude and longitude data where it is not given. Information with latitude and longitude (or x and y coordinate) data can be found in the following:

1. Sources in SW_BySIC/SW
2. SW_RegionalGasPlants/SW_RegionalTreatingPlants
3. SW_NATCARB_Data/FacilitiesWithRBLCID
4. RACT_BACT-laer_NonPower/PortlandCement, Fertilizer, and NonPower
5. SW_99v3AirDataFacilitiesFile/RBLC_SW, RBLC_SW_ElectGen/ORIS_Facility_Code
6. SW_CooridFromEPA_HAP
7. RACT_BACT_laer/SW
8. SW_ElectricPlants_eGRID/EGRDPLNT00

Information with other location data can be found in the following:

1. SW_RegionalGasPlants/H_2S>5% and AcidGas>20%
2. SW_NonFuelPlants/CementInRegion, AmmoniaInRegion, ChlorinePlants, EthylenePlants, and EOR
3. SW_99v3AirDataFacilitesFile/NH_3Releases
4. SW_EthanolPlants/SW_EthanolProduction

Data with CO_2 Emissions

Several data sources provide CO_2 emissions data in various forms. Some are as detailed as monthly emissions on specific units within a facility while some are provided on the facility or even state basis. Several databases contain emission data on other components, such as CO, NO_x, NH_3, and VOC. Information on CO_2 emissions can be found in the following:

1. SW_NATCARB_Data/Emissions
2. SW_NonFuelPlants/EIASummary
3. SW_ElectricPlants_CO_2_Tons_%/ SW_ElectricPlants_CO_2_Tons_%
4. SW_ElectricPlants_eGRID/EGRDBLR00

Data with Process Criteria

In order to estimate CO_2 capture costs from the various sources in the region, certain process criteria must be know. This can vary among the various technologies from simple capacity to specific emission-producing and emission-mitigating equipment. These data are part of the input to GTI's costing protocol. Process criteria information are contained in the following:

1. SW_RegionalGasPlants/SW_RegionalTreatingPlants
2. SW_NATCARB_Data/Emissions, Fuels, and FacilitiesWithRBLCID
3. RACT_BACT-laer_NonPower/PortlandCement, Fertilizer, and NonPower
4. SW_NonFuelPlants/CementInRegion, AmmoniaInRegion, ChlorinePlants, EthylenePlants
5. SW_99v3AirDataFacilitiesFile/ORIS_Facility_Code
6. RACT_BACT-laer/SW
7. SW_ElectricPlants_eGRID/EGRDPLNT00, EGRDBLR00, EGRDPLCH, EGRDPRCH, and EGRDPCCH
8. SW_EthanolPlants/SW_EthanolProduction

OPPRNAME
Location (operator)-based parent company name

PCANAME
Location (operator)-based power control area name

PCAID
Location (operator)-based power control area ID

NERC
Location (operator)-based NERC region acronym

NERCNUM
NERC number associated with NERC region

SUBRGN
eGRID subregion acronym

HTIEOZ
Boiler 2000 ozone season ETS/CEM heat input (MMBtu)

HTIFAN
Boiler 2000 annual total EIA-based calculated heat input (MMBtu)

HTIFOZ
Boiler 2000 ozone season EIA-based calculated heat input (MMBtu)

HTICL
Boiler 2000 annual EIA-based calculated coal heat input (MMBtu)

HTIOL
Boiler 2000 annual EIA-based calculated oil heat input (MMBtu)

HTIGS
Boiler 2000 annual EIA-based calculated gas heat input (MMBtu)

GENNTAN
Generator 2000 annual net generation (MWh)

GENNTOZ
Generator 2000 ozone season net generation (MWh)

GENYRONL
Generator year on-line

SEQGEN
eGRID96 1996 file generator sequence number

SEQGEN97
eGRID97 1997 file generator sequence number

SEQGEN98
eGRID2000 1998 file generator sequence number

NEWPERC
New percent, if CHTYPE=OWN

NEWID
New ID

NEWID
New ID

NEWID
New ID

SRNAME
eGRID subregion name

FIPST
Plant FIPS State code

FIPSCNY
Plant FIPS county code

CNTYNAME
Plant county name

LAT
Plant latitude

LON
Plant longitude

HTIBM
Boiler 2000 annual EIA-based calculated biomass/ wood heat input (MMBtu)

HTISW
Boiler 2000 annual EIA-based calculated solid waste heat input (MMBtu)

HTIOT
Boiler 2000 annual EIA-based calculated other fuel heat input (MMBtu)

HTIBAN
Boiler 2000 annual best heat input (MMBtu)

HTIBOZ
Boiler 2000 ozone season best heat input (MMBtu)

NOXEAN
Boiler 2000 annual ETS/CEM NOx emissions (tons)

NUMBLR
Number of utility boilers

NUMGEN
Number of generators

SOURCEM
Plant emissions source(s)

PLPRIMFL
Plant primary fuel

PLFFLCTG
Plant fossil fuel category

CAPFAC
Plant capacity factor

NOXEOZ
Boiler 2000 ozone season ETS/CEM NOx emissions (tons)

NOXFAN
Boiler 2000 annual EIA-based calculated NOx emissions (tons)

NOXFOZ
Boiler 2000 ozone season EIA-based calculated NOx emissions (tons)

SO2EAN
Boiler 2000 annual ETS/CEM SO2 emissions (tons)

SO2FAN
Boiler 2000 annual EIA-based calculated SO2 emissions (tons)

CO2EAN
Boiler 2000 annual ETS/CEM CO2 emissions (tons)

BOILCAP
Utility plant boiler capacity (MMBtu/hr)

NAMEPCAP
Plant generator capacity (MW)

CHPFLAG
Combined heat and power (CHP) (cogenerator) 2000 plant flag

USETHRMO
CHP plant 2000 useful thermal output (MMBtu)

PWRTOHT
CHP plant 2000 power to heat ratio

ELCALLOC
CHP plant 2000 electric allocation factor

PLNUCONN
Nonutility plant connected to grid flag

CO2FAN
Boiler 2000 annual EIA-based calculated CO2 emissions (tons)

SRCBEST
Source of "best" 2000 heat input, NOx, SO2, and CO2 data

NOXBAN
Boiler 2000 annual best NOx emissions (tons)

NOXBOZ
Boiler 2000 ozone season best NOx emissions (tons)

SO2BAN
Boiler 2000 annual best SO2 emissions (tons)

CO2BAN
Boiler 2000 annual best CO2 emissions (tons)

SO2CTLDV
2000 SO2 (scrubber) control device for utilities

PSFLG
Plant pumped storage flag

ARDBNU
ARD nonutility flag

LMSWFLG
Nonutility plant landfill methane or solid waste flag

PLNUCMBS
Plant nonutility combustion flag

PLNUCOAL
Plant nonutility coal flag

UTNOWNU
Now nonutility flag

GENERVAL
Generation value source

NOXCTLDV
2000 NOx control device for utilities

T4A00
Year 2000 Title IV SO2 1998 reallocation plus repowering allowance (tons)

T4A10
Year 2010 Title IV SO2 1998 reallocation plus repowering allowance (tons)

BLRYRONL
Boiler year on-line

BLRSEQ
Unique boiler identifier originating in NADB, and continuing in ARDB and IMDB data files

SEQBLR
eGRID96 1996 file boiler sequence number

SEQBLR97
eGRID97 1997 file boiler sequence number

EMISVAL Emission value source

RESMXVAL Resource mix value source

NONFUEL RAW MINERAL PRODUCTION IN SW REGION

(Thousand metric tons unless otherwise specified)

Mineral		AZ	CO	WY	TX	NV	KS	OK	UT	NM
Beryllium concentrates									2,500	
Cement:										
Masonry					290		30			
Portland					10,700		2,310			
Clays:									W	
Bentonite				3,400		34	647		454	
Common		42	295	41	2,240			735		30
Fuller's earth					29	--				
Kaolin					40					
Copper[3]		760								113
Gemstones		NA	NA	NA	NA				NA	NA
Gold[3]	kilograms	129	W			242,000				
Gypsum, crude					W			2,570		
Helium, crude	n cubic meters				8		32			
Grade-A	n cubic meters						86			
Iodine, crude	metric tons							1,700		
Lime			32		1,560				2,590	
Salt					9,390		3,060			
Sand and gravel:									30,300	
Construction		49,200	40,700	8,300	78,700	33,200	9,600	10,700		10,900
Industrial			W		1,770	608		1,360		
Silver[3]	metric tons	W	W			449				
Stone:									7,800	
Crushed		8,200	16,000	5,400	128,000	9,700	22,000	40,700		5,900
Dimension			10,200		88,100		12,600	16,500		26,100
Talc, crude	metric tons				233,000					
Tripoli	metric tons							11,700		

[e]Estimated. [p]Preliminary. [r]Revised. NA Not available. W Withheld to avoid disclosing company proprietary data; values included with "Combined values" data. XX Not applicable.

[1]Production as measured by mine shipments, sales, or marketable production (including consumption by producers).

[2]Data are rounded to no more than three significant digits; may not add to totals shown.

[3]Recoverable content of ores, etc.

[4]Withheld to avoid disclosing company proprietary data.
