# Quarterly Research Performance Progress Report

## (Period Ending 9/30/2018)

### NUMERICAL STUDIES FOR THE CHARACTERIZATION OF RECOVERABLE RESOURCES FROM METHANE HYDRATE DEPOSITS

Project Period (April 1, 2012 to July 31, 2018)

Submitted by:  
Matthew T. Reagan

# RESEARCH PERFORMANCE PROGRESS REPORT

## DISCLAIMER

“This report was prepared as an account of work sponsored by an agency of the United States Government. Neither the United States Government nor any agency thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof. The views and opinions of authors expressed herein do not necessarily state or reflect those of the United States Government or any agency thereof.”

## ACCOMPLISHMENTS:

### Task 1. Project Management Plan

Status: Ongoing

A PMP was submitted for Budget Period #6 in March 2017. A revised FWP and SOPO was submitted on July 31, 2017. A revised for the new, extended BP #6 was submitted in August, 2017.

### Task 2. Code Maintenance, Updates, and Support

Subtask 2.6:

Status: Ongoing, task expanded 7/31/2017

Development of the new Millstone geomechanical code has been ongoing, and has been tested in real-world simulation problems associated with other tasks in the FWP, including new capabilities for static post-processing of pre-existing T+H simulation.

The release of the new coupled T+H/Millstone platform was accompanied by the submission of three papers that document 1) T+H code development, 2) Millstone code development, and 3) testing of the latest coupled simulator. These papers are now in the second round of review for *Transport in Porous Media*.

### Task 3. Support of DOE's Field Activities and Collaborations

### Subtask 3.6: Detailed Analysis of the Production Potential of Hydrates Deposits Offshore India

Status: Ongoing

The latest versions of the T+H and Millstone codes, developed in Task 2, were used for ongoing simulations of the India NGHP Site 9 production test. The results from these simulations were submitted to the journal special issue associated with the India NGHP in late April 2018 and the results were presented in a confidential report to the NGHP leadership in April. The paper has undergone two rounds of review and will be resubmitted with minor changes in November:

Moridis, G.J., Reagan, M.T., Queiruga, A.F., Collett, T.S., Boswell, R., "Evaluation of the Performance of the Oceanic Hydrate Accumulation at the NGHP-02-9 Site of the Krishna-Godavari Basin During a Production Test and Under Full Production," *submitted to J. Marine and Petroleum Geology*.

### Subtask 3.7: Participation in the Code Comparison Study of Coupled Flow, Thermal and Geomechanical Processes

Status: Ongoing

The LBNL team has been participating in the regular meetings and has contributed problem solutions. Matt Reagan and Alejandro Queiruga designed Problem #3, a variation of a standard axisymmetric coupled flow-mechanical test problem, which was submitted to the study in August 2018.

As part of this code comparison study, we have also begun an investigation into mesh convergence for our Darcy simulator with and without hydrate in the system. During review of several recent papers, questions were raised about the choice of discretization, particularly near the well. As part of Problem #3, we performed mesh convergence testing with and without hydrate to assess whether mesh generation is being done correctly. Results showed that sub-meter gridblocks are indeed needed near the wellbore in a cylindrical problem to resolve small features such as lenses, but that overall results (i.e. production rates) converge at slightly larger deltas.

## **Task 4. Assessment of Resource Recoverability From Natural Hydrate Deposits**

Subtask 4.4:

Status: Completed

Work on Subtask 4.4 concluded in Q3, with the work focusing on simulations of the production behavior of horizontal wells in sloping systems and the geomechanical consequences. Current funding was exhausted at the end of June 2018.

## Milestone Table

Milestone Title	Milestone Description	Planned Completion Date	Actual Completion Date	Status / Results
PMP	Maintenance and update of the Project Management Plan	April 30, 2016,  March 30, 2017	Included with BP#6 SOPO 3/15/17	Updated 30 days after receipt of added BP #6 funding
Deliverable	Report and presentation(s) regarding the results of the initial Subtask 3.6 simulations	June 30, 2017	Results to date presented at ICGH 9 on June 26-30, 2017.	Subtask 3.6 extended and expanded to cover a wider range of scenarios and parameters through July 2018,
Deliverable	Completed T+H/ROCMECH Code Updates	December 31, 2016	March 27, 2018**	ROCMECH found to be incompatible with cylindrical well simulations (i.e., India NGHP studies). Development suspended in May 2016 with the beginning of Millstone development.  **T+H/Millstone v1.0 completed in March 2018.
Deliverable	Submission of a report on the preliminary studies of offshore Indian hydrates	May 31, 2017	May 2017	Report submitted.
Deliverable	Completion of the analysis and submission of a paper evaluating the production performance of slanted wells	July 31, 2016	March 16, 2018	Paper submitted to 2018 Offshore Technologies Conference Asia. Presented May 2, 2018.
Deliverable	Submission of a paper on the expected long-term fate and transport of released gas following the cessation of operations	July 31, 2016	December 12, 2016; June 30, 2017	Results presented as a poster at AGU Fall Meeting. Paper submitted to ICGH 2017 and presented June 30, 2017.
Deliverable	A paper (jointly with T. Kneafsey) on the design and analysis of the planned experiments.	May 31, 2017	Pending	Delays in experiments have resulted in a delay in producing a paper. We are currently evaluating completed tests.
Deliverable	Updated versions serial and parallel versions of the T+M/Millstone code	July 31, 2018	March 27, 2018	Three papers describing T+H/Millstone submitted to Transport in Porous Media.
Deliverable	Completion of analyses and participation in the code comparison study	July 31, 2018	Ongoing	Problem #1 completed in Q2. Problem #2 and #3 completed in Q3. CCS will continue into FY19.
Deliverable	Submission of a report on the ongoing studies of offshore Indian hydrates	Jul 31, 2018	April 13, 2018	Report submitted to NGHP; Report condensed into paper submitted to JMPG.
Deliverable	Submission of a report on the evolution of subsidence and strategies to mitigate production problems	Jul 31, 2018	Ongoing	Work ongoing with a goal of a paper in FY19
