

Improving the Monitoring, Verification, and Accounting of CO₂ Sequestered in Geologic Systems with Multicomponent Seismic Technology and Rock Physics Modeling

DOE Award DEFC2609FE0001317

Bob A. Hardage
Principal Investigator

Bureau of Economic Geology
The University of Texas at Austin

U.S. Department of Energy
National Energy Technology Laboratory
Carbon Storage R&D Project Review Meeting
Developing the Technologies and Building the
Infrastructure for CO₂ Storage
August 21-23, 2012

Benefit to the Program

- **Program Goals**

- Develop technology to predict CO₂ storage capacity of a targeted formation to an accuracy of ± 30 percent.
- Develop technology that defines amount of CO₂ that remains in injection zones.

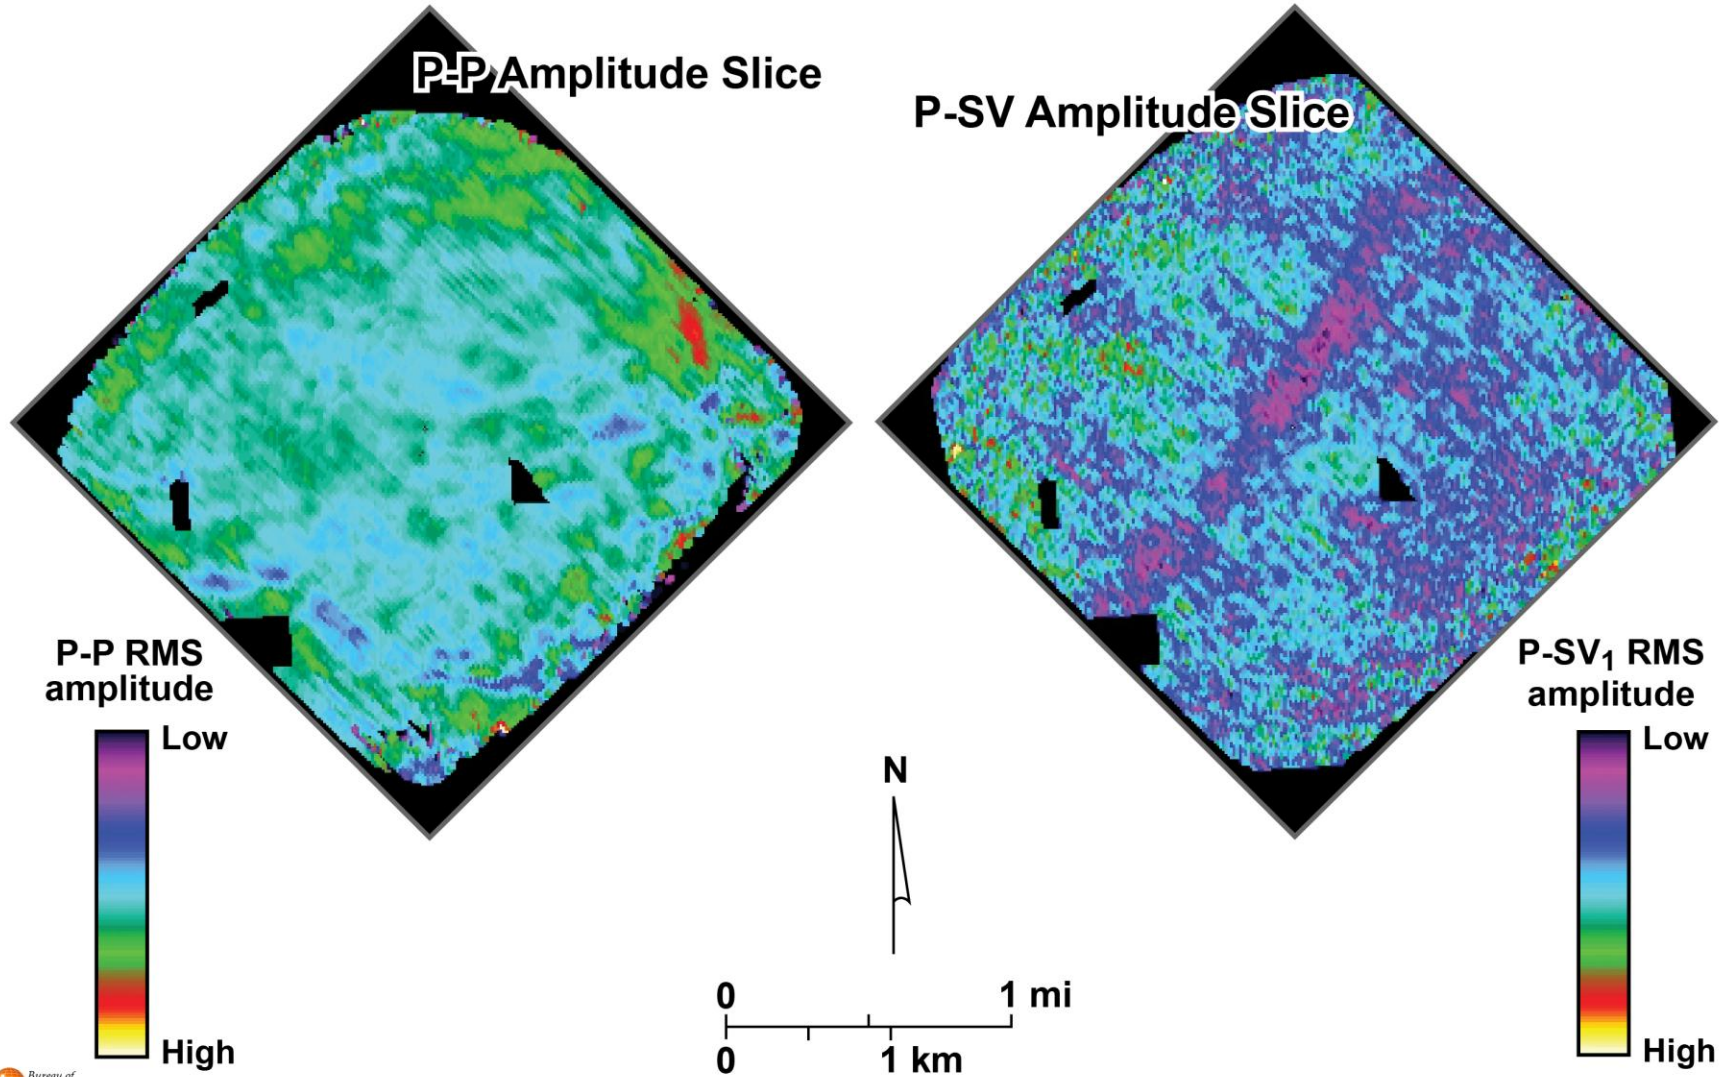

- **Project Benefits**

- Defines intra-reservoir anomalies not seen with P-wave seismic data.
- Better definition of subtle faults.
- Improved resolution of stratigraphic layering.

Project Overview

- **Goals and Objectives**
 - Improve fault detection and stratigraphic resolution.
 - Detect intra-reservoir anomalies that affect fluid flow.
 - Demonstrate vertical-force seismic sources generate direct-S modes.
- **Success Criteria**
 - Produce real data examples that provide visual proof that each of these objectives is achieved.

INTRA-RESERVOIR ANOMALY: MIDDLE DEVONIAN SANDSTONE INTERVAL

FAULTS, FOLDS, AND SPATIAL RESOLUTION

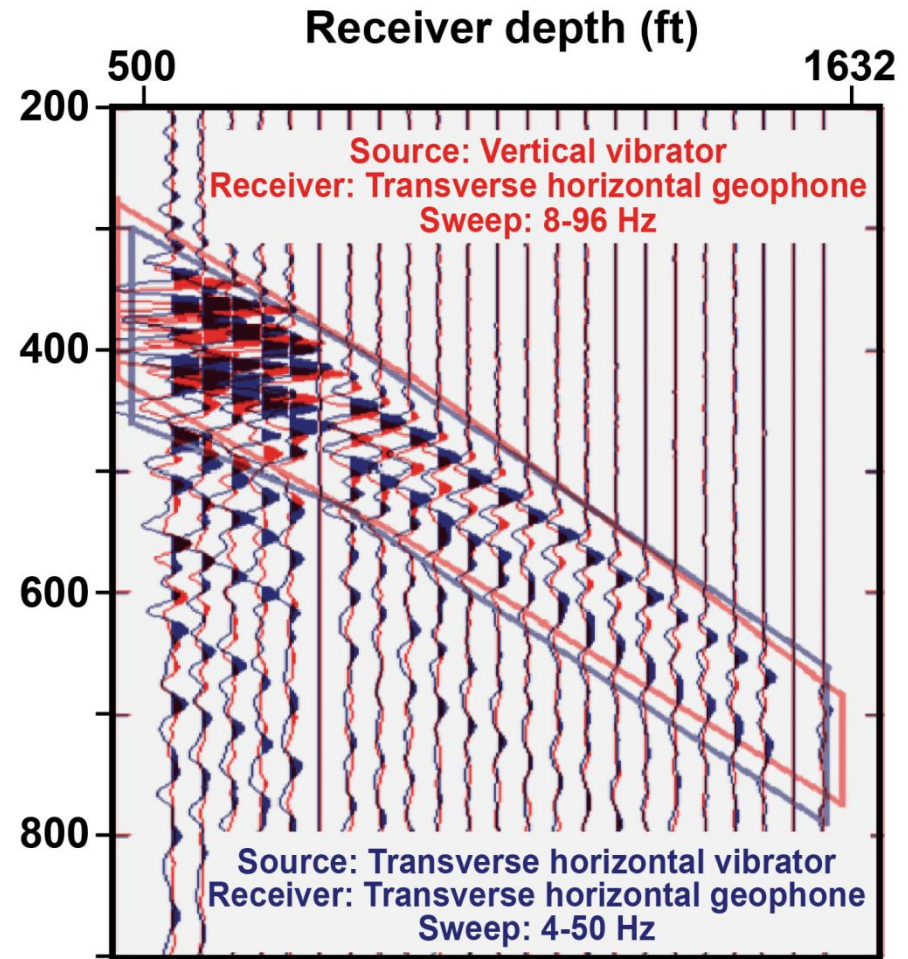

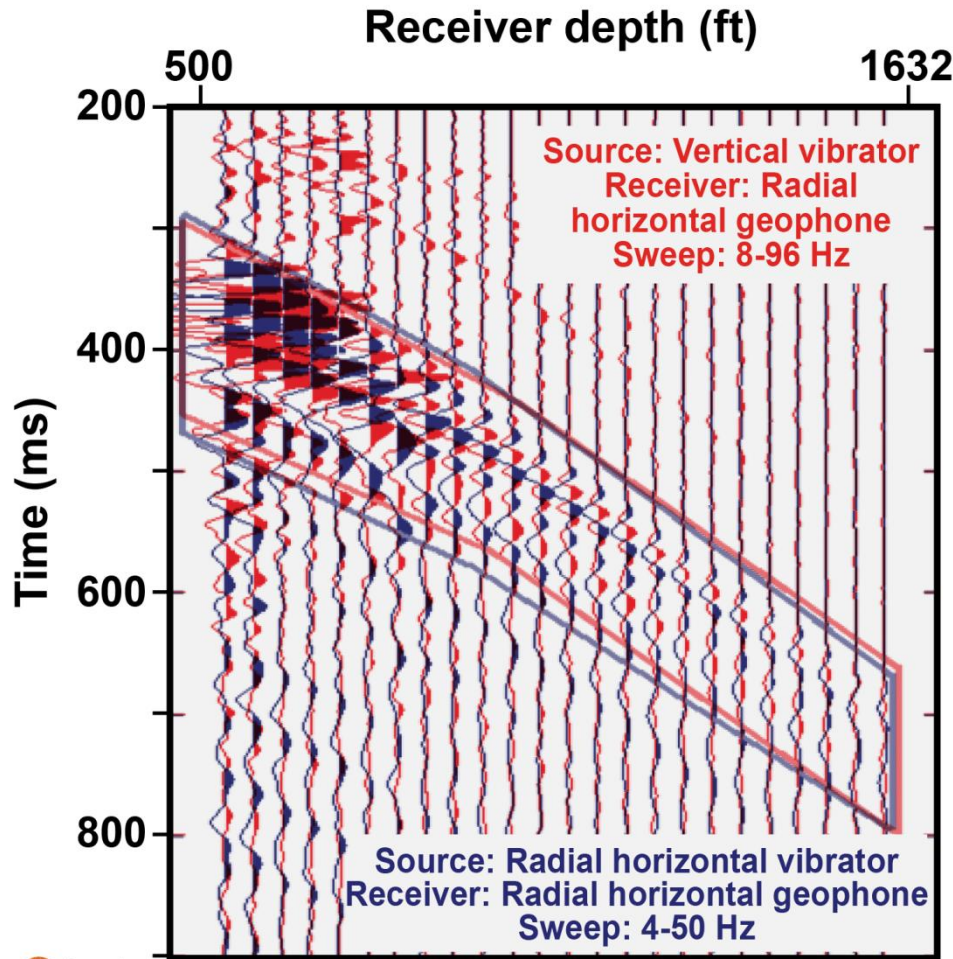

FIELD TESTS: ANALYZING DIRECT-S MODES

QAd7113b&w

DIRECT-S FROM HORIZONTAL AND VERTICAL VIBRATORS

Accomplishments to Date

- **Documented value of P-SV seismic data.**
- **Collected and analyzed test data comparing direct-S modes produced by horizontal-force and vertical-force seismic sources.**

Summary

- **Key Finding and Carry-Away Message**
 - **Multicomponent seismic technology is essential for optimal MVA of sequestered CO₂!!**
- **Future Plans**
 - **Demonstrate value of direct-S mode produced by vertical-force sources.**
 - **Demonstrate value of SV-P seismic mode (the inverse of the P-SV mode used in the study).**

Appendix 1: Project Team

Research Team

**Bureau of Economic Geology
(Exploration Geophysics Laboratory)**

Industry Cost Share

- Geokinetics (3C3D seismic data)
- Geophysical Pursuit, Inc. (3C3D seismic data)
- Chesapeake Energy (VSP and well log data)
- Dawson Geophysical (Field tests)
- Halliburton (Field tests)
- Sercel (Field tests)
- Mitcham Industries (Field tests)
- Seismic Source (Field tests)
- iSeis (Field tests)
- United Service Alliance (Field tests)

Appendix 2: Gantt Chart

WORK TASKS

Task	Year 1				Year 2				Year 3			
	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4
1. Project management, planning, and reporting	█	█	█	█	█	█	█	█	█	█	█	█
2. Technology transfer		█	█	█	█	█	█	█	█	█	█	█
3. Select study sites		█	█	M1								
4. Build calibration database		█	█	█			M2					
5. Acquire multicomponent seismic data		█	█	█			M3					
6. Build geological model				█	█	█	█					
7. Build rock-physics model				█	█	█	█	M4				
8. Seismic data processing				█	█	█	█	█	M5			
9. Seismic interpretation				█	█	█	█	█	█	█	█	M6
10. Construct maps of geologic properties				█	█	█	█	█	█	█	█	M7
11. Postmortem and documentation				█	█	█	█	█	█	█	█	█

M1–M7 = Milestones

█ Delay of 3 months;
Loss of 3 research staff

Appendix 3: Bibliography

Publications

Thesis:

- Alkan, E., (Dec. 2012?), PhD Thesis, The University of Texas at Austin

Journal:

- Alkan, E., and B. Hardage, 2013, Comparison of direct-S modes produced by horizontal vibrators and vertical vibrators: The Leading Edge, Society of Exploration Geologists.

New Journal for Case Histories:

- INTERPRETATION. A new journal published by Society of Exploration Geologists to be launched in 2013. Case history paper being prepared. Need other case histories about CO₂ Sequestration.
